skate is found within, lying quiet, as though lifeless, with its long tail coiled closely around its body and head; if very young the fish is hardly discernible at first, for he is but little more than a little transparent lice, resting on an oval mass resembling the yoke of an egg (which, for that matter, it is) nearly an inch in diameter; but carefully removed to a dish of water he soon gains vitality, and with corkscrew movements of his tail endeavors to swim away, but is too securely anchored by the ovaries, and can only wriggle. In this state, to the naked eye, no fins are visible—simply a little line, enlarged at one end a trifle, where two specks denote the eye. A little later in life, had we left him alone, he would have presented an appearance more akin to that of the full grown skate. But between these extreme stages of his existence he has passed through many changes. At first a mere transparent line, with no fins nor gills, gradually little threads or branchia have formed from near to his head; he grows broader by degrees, and the tail, which at first represents nearly the whole of him, grows shorter in proportion; the branchia become transformed into gills, and a portion of the tail is either absorbed or dropped off, for at first there is a fair proportion of it, reaching beyond the caudal fin, and in the older fish the fin completes the creature as in other fish. These changes occur while it is still too young to cut clear of its locker of fresh provisions, which its ovarian sac supplies. But now, grown stronger, it can carry this with it as it swims. The beautiful pink and transparent straw color which marked the earlier stages of its existence have deepened into brown and yellow, and the spots and markings of the mature fish begin to appear, and finally it emerges from its egg, left thinner at one end, ready to go on its own way and seek its own living. The skate has one peculiar feature, the teeth of the female are very different from those of the male. In the former they are sharp and shaped like the teeth of a saw. In the latter, flat crushers, like those of the sheephead. As they probably feed on the same food, the "reason why" I can't find out."

J. D. Hill, of Nashville, Tenn., mentions having seen a very large stingray caught at Pass Christian, Lake Borgne, Gulf of Mexico, which, upon being landed, gave birth to at least a dozen young, each about the size of a man's hand.

MACKEREL.—We have a most valued and interesting paper on the "Habits of Mackerel," which we shall print in our next issue, from the pen of Dr. Bernard Gilpin, of Halifax, Nova Scotia, who is perhaps the most eminent naturalist of that Province.

DEFORMITY IN WOODCHUCKS' TEETH.—THE CAUSE.—Bedford, O., June 13.—Mr. Editor: I intended to have written an article for your paper in reference to those distorted woodchucks' teeth. I have seen the skulls of two woodchucks as badly distorted as the one shown in your paper, and I once shot a porcupine, whose upper incisors were as completely coiled as a pair of ram's horns, the points of both teeth passing completely through the upper lip. I suppose you know these distortions are caused by an accident, which is common, or likely to happen, to all of the rodents. I should suppose the beaver would be very likely to meet with this accident, but I have inquired diligently of the Indians who trapped them but never could hear of a single case in the beaver. I inquired of one old Ojibway Indian who had killed over 3,000 beavers, and he told me that he had never seen a single instance of the kind with the beaver, but that he had in a porcupine.

You know that the beaver is the greatest gnawer of all the rodents. I have seen a maple tree, of fourteen inches in diameter, that had been gnawed down by the beaver. The accident is caused by getting a piece of wood wedged in between

the upper incisor teeth, and as the teeth grow, they spread apart and the animal cannot shorten them. In sharpening his teeth, as he is compelled to do in order to enable him to do his work, he sharpens his upper incisors with the under incisors and the under incisors with the upper, or superior incisors. Now, if he happens to get a piece of wood wedged in his incisors—and more especially the upper ones—and cannot dislodge it, his incisor teeth, so wedged, will spread apart, and in their growth, which is constant, and in course of not a very long time, the animal is unable to shorten his incisors by the process of sharpening them. The consequence is what you saw in that unfortunate woodchuck's skull. This sharpening and shortening the incisors is a positive necessity of all the rodents, and it is a curious provision in nature that their incisors are continually lengthening by growth, and kept to a proper length by process of sharpening.

DR. THEO. GARLICK.

CARNIVOROUS TASTES OF THE RED SQUIRREL.—Our correspondent, Mr. A. W. Greeley, of Nashua, N. H., says:

"It may be that the red squirrel does not mutilate the gray, but that he destroys young birds there can be no question; but what he does it for, I cannot conceive. Will some one explain? He certainly does not kill them for food."

[Undoubtedly it does; but just why, it is hard to say. As horses, though strictly vegetable feeders, are said sometimes to relish a slice of rare beef, so the squirrel may incline to more nutritious food than buds and tender sprouts at a season when the more substantial nuts, which form his winter diet, are not to be obtained. There is a great variety in the diet of the different rodents, and it is difficult to say why the common rat and mouse should be carnivorous, while nearly all wild species confine themselves to an exclusively vegetable regimen. In the West various species of *Spermophilus* feed largely on grasshoppers, and we have seen *Tamias quadrivittatus*, devouring with evident satisfaction the remains of a *Hesperomys*.—Ed.]

COURTSHIP OF THE PRAIRIE CHICKEN.—Editor *Forest and Stream*: On several occasions recently I have had the good fortune to be an eye witness of the punctate grouse while going through his booming tactics. First he raises his tail vertically, stretches his neck out to its full length, and brings both body and neck to a horizontal position, he then ruffs the feathers of his neck, and runs violently in diagonal tracks of a few yards each, stopping a few seconds at the end of each run. After he has worked his temper up to the required pitch, he inflates his sacs until they stand out in purple bulbs, over an inch in diameter, on either side of his neck close to the head, then with downward and slightly inward motion of head and neck, dipping perhaps an inch or a little more, and with a longer interval between the first and second than the second and third, he produces his amorous note: boom—boom—boom.

All this time the object of his affections may have been close to him, or several hundred feet off. The males seem to prefer the knolls and higher parts of the prairie, but I have seen them in large coveys, at evening, gathered around sloughs and lakes. At such times the cocks divide their time between booming and fighting, all present often joining in a promiscuous rough-and-tumble. Often several pairs will fight fiercely for several minutes, acting very much like domestic fowls in like circumstances, and then suddenly make for some neighboring cocks.

VERD MONT.

Sleepy Eye, Brown Co., Minn., May 20, 1878.

VARIATION IN COLOR OF THE BALTIMORE OREOGE.—I have recently skinned out two golden robins (*I. Baltimoreensis*), one of which had a solitary white feather in the cheek; otherwise very black, as usual. The other was very high colored in breast, and running all through the black on head were fringes of much the same high color as the breast. Both the above were males. Yours,

R. L. N.

Salem, Mass., May 31, 1878.

A NEST FULL.—Woodstock, Ohio, June 3.—Dear Editor: The prospects for good quail shooting this fall were never better, the weather and food all that could be asked to hatch and feed the young. While staking some stumps in my wheat field this week I came upon a quail nest containing forty two eggs. Now, is it common for more than one quail to lay in the same nest? It is my opinion there must have been more than one that did the laying in this instance, as the eggs seemed to differ materially in size, although there is only one bird sitting on them.

T. M. OWEN.

[It is said to be a common occurrence for two hen quails to lay their eggs in the same nest.—Ed.]

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR FREE END TWO JUNE 15, 1878.—One horseshoe crab, *Limulus polyphemus*, presented by Mr. Foud, New York City; one larger-eared mynah, *Gracula intermedia*, presented by Mrs. L. Gray, New York City; one guinea fowl, *Sula fiber*, presented by Dr. Samuel W. Francis, Newport; one horned owl, *Bubo virginianus*, presented by Mr. E. E. Worl, Elyria, Ohio; one red fox, *Vulpes fulvus*, presented by Sergeant Wm. A. Rawell, New York City. Born in Menagerie: Three English pheasants, *Phasianus colchicus*; one white swan, *Cygnus olor*; one fallow deer, *Cervus dama*. W. A. COMELIN, Director.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS FOR FREE ENDING TUESDAY, JUNE 18.—Two gray gophers, *Spermophilus franklini*, presented; two common marmosets, *Leontideus jacobus*, presented; one stoat, *Putorius erminea*, presented; one screech owl, *Scops asio*, presented; one fallow deer, *Dama vulgaris*, born in garden.

We call our readers' particular attention to the advertisement of the old firm of Messrs. Dudd, Mead & Co., 751 Broadway, who make a specialty of works in natural history. They solicit correspondence with libraries, reading clubs, and book buyers generally.

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

Woodland, Farm and Garden.

THIS DEPARTMENT IS EDITED BY W. J. DAVIDSON, SEC. N. Y. HORTICULTURAL SOCIETY.

NEW YORK HORTICULTURAL SOCIETY EXHIBITION.

WEDNESDAY, Thursday and Friday of last week were red-letter days in the history of this flourishing society, and we are happy to again chronicle a deserved success, more especially as the management was afraid for some weeks before, that, owing to the early season the roses and strawberries would be too far advanced to make a good exhibition. In this it was agreeably disappointed, and a better show, both of fruits, flowers, plants and vegetables, would be hard to get together at this season. Gilmore's Garden too, is probably the best hall in the world where such an exhibition could be held and, taken with Thomas' far-famed music, the splashing of cascade and fountains, and the number of visitors all either intent on music, flowers, fruits or floral designs, made the garden look a perfect paradise—if a rather noisy one. First to strike the eye on entering were the fine collections of strawberries from E. P. Roe, Cornwall-on-Hudson, and Dr. Hexamer, Newcastle, N. Y. Peter Henderson, Jersey City Heights, also made a good exhibit, but after all the palm for single sorts went to E. W. Durand, Irvington, N. J. This gentleman has been most successful in raising some of the best new varieties; his Great American (fruit of which were exhibited weighing nearly two and one-half ounces) Durand's beauty, which received a special certificate for size and flavor combined, and Jersey Queen, which for color, size and shape took every eye, were admired by every one; the latter tasted better than it looked, so it must be good. In this connection we would observe that fruit of that beautiful conical shape with good color takes the eye of the public much more than those immense coxcomb shaped varieties which look like so many monstrosities, and are only valuable, comparatively, for their great size. Gooseberries were also well shown, a dish of "Whitesmith," from Mr. Henderson, Westchester, being very large and free from mildew. In this connection also we had a point given us. Mr. Henderson uses as a preventive and cure for mildew on gooseberries, Glauber's Salts. He claims it kills mildew on the first application, leaving the berries quite clean when washed off by the rain, and if used as a top dressing under the bushes, by keeping the soil moist and cool, it acts as a preventive as well. Will some of our readers try for themselves and report? Hothouse grapes were largely represented, bunches of Black Hamburg, from Mr. Eagan, gardener to W. S. Gurnee, Esq., Irvington, N. Y., weighing 4½ and 5 pounds respectively, and two bunches of Muscat of Alexandria, from Mr. Brownson, Oyster Bay, L. I., being as perfect as to size and evenness of berry, clear, beautiful amber color, and symmetry of bunch, as any we have ever seen. Peaches also were well to the front; four trees in tubs, grown by Ed. Hucks, Mt. Vernon, N. Y., being shown loaded with fruit; as well as a number of single dishes from other growers. Quite considerable interest was manifested in the display of vegetables made by Peter Henderson from his trial grounds in Jersey City. These comprised about twenty varieties of lettuces, as many of carrots, and quite a number of beets, kale, cauliflower and peas.

Of greenhouse and stove plants, there was as usual a large and choice exhibit, Messrs. Such's and Bush's tables being remarkably fine. Principal in the former lot were Anthurium Scherzerianum, a noble plant; A. Crystallinum, Ixora Jananica flava I. Amboyense, Croton Lord Cairns, Weismanni and Majestium, Acalypha tricolor, Dracena hybrida, Eurya latifolia variegata, a very large plant of Phormium tenax variegata (the striped New Zealand flax), Alocasia Sedeni, Bonaparte hystrix, some lovely Gleichenias and other ferns, and a fine lot of Palms, notably Veitchia Cantherburyana, the finest plant of it in the country. The rarest plants on exhibition were six seedling East Indian pitcher plants (Nepenthes vars.), raised by Mr. James Taplin, manager to Mr. Such, South Amboy. They far surpass in beauty of pitcher, marking and coloring any we have seen either here or in England, being much deeper in color than N. Sanguinea, and the shape almost perfect. He received a well deserved certificate as well as the premium offered for the best new and rare plant not before exhibited. In Mr. Bush's collection were tidy plants of Croton Weismanni, Johannis, Bismarckii and Mooreana Pandanus Veitchii, Campylohotrys refulgens, Dieffenbachia Bowmani, Spharogyne latifolia, Arthursium of sorts, Dracenas Youngii, nigra-rubra, amabilis, splendens, and the new and beautiful D. Casanova, etc.; Isae Buchanan, Astoria, also made a fine display of Palms, Orchids, Selaginellas, etc.; W. C. Wilson, Astoria, of Ferns, Dracenas and other rare plants; Laurentz & Weigand, Astoria, and F. Roenbeck, Bayonne, N. J., of Ferns, well grown and very beautiful; John Henderson, Flushing, of double zonal Pelargoniums and a fine plant of the sugar cane. Mr. Zeller, Flatbush, of monthly Carnations and a miscellaneous collection of stove and greenhouse plants; Peter Henderson, of Gloxinias, Verbenas, etc.; S. B. Parsons, Sons & Co., Flushing, a splendid display of hardy evergreens, Japanese Retinosporas and Japanese Maples, with their curiously cut and variegated foliage. Such a collection could not be exhibited at present by any English or Continental nurseryman. The most interesting plant in the whole exhibition, however, was the Ouvirandra fenestralis or lattice plant of Madagascar. It grows entirely under water, and has been one of the most difficult plants to import and grow to perfection, and we believe has never before exhibited in this country. It was shown by Mr. Mayne, gardener to Mrs. Mary Jane Morgan, Twenty-sixth street, who also took first honors for a fine collection of Orchids in bloom, many of them new and rare. The show of cut flowers was also good, Messrs. A. W. Burgess and A. Dejonge leading the way in roses, and Messrs. Woolson & Co., Passaic, N. J., with a very choice collection of cut blooms of herbaceous plants. From one of the students at the Normal Agricultural School at Hampton, Va., was received by mail a collection of over thirty-five correctly named grasses, which were much admired and received a well merited diploma. The florists did not turn out quite so strong as usual, though their table was comfortably well filled. The most tasteful, neatest, and at the same time least expensive design, was a picture frame composed of rose buds, etc., with a row of the common yellow Linaria (butter and eggs) round the margin to represent the

gilding, the picture itself being a group of water or pond lilies, most artistically arranged on a background of ivy leaves. This was exhibited by Mr. Shepherd, 1,286 Broadway. Mrs. W. J. Davidson, Brooklyn, contributed a dinner table laid for ten persons, in the centre of which was a mound of flowers composed of the rarest exotics, interspersed with growing plants of Adiantum Farleyense. From the centre of this mound sprung a tall March glass (trumpet shaped) also filled with choice flowers mixed with ferns and grasses, giving the whole design a most light and graceful appearance; the two side pieces were palms (the graceful Cocos Weddelliana), the pots being let through the table and only the palms showing on top. Four small bouquets flanked the centre piece, and at each plate was a neat Boutonniere. This novel exhibit was much admired, and received a special premium from the judges. Mr. James Riddle, Inwood, also exhibited a novelty in designs. It was composed of rooted plants, some 2,500 or more being used in its construction. We believe Mr. Gilmore secured it as a permanent attraction to the garden. Taken altogether the society may well be proud of their third semi-annual exhibition, the attendance being larger than ever before, averaging over 5,000 each evening, showing indisputably the growing interest taken by the public in all things horticultural.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, signs of suffering, etc.

CANINE MADNESS.

JAMAICA PLAINS, June 12, 1878.

MR. EDITOR: The increasing interest taken by the public in field sports has of late induced the magazines to enliven their pages with an occasional sporting article. The series in *Scribner*, if not always correct in detail, is admirably illustrated, and similar papers in *Harper's Magazine* are quite readable. Even the epicurean writers in the *Atlantic Monthly* are turning their attention to the woods and waters, though in a feeble way. Mr. Warner "verifies the Adirondacks," as if hitherto those regions had been a myth to the dwellers in and about Boston, and he, a milder Stanley, had been sent into that howling wilderness to see if it were safe. This pleasant writer, however, appears to more advantage in his suburban garden than under the grim shadow of Bald-face Mountain, and the whole tone of the narrative shows that, to him, the pleasantest day of the excursion was that on which they broke camp.

In the June number of the *Atlantic*, a party of contributors are supposed to be boating in Florida, but their talk, as at home, is of novels, poetry, taste, and the musical glasses, with an alligator and a "blue hitten" thrown in to give a local color. All evidently evolved from the inner consciousness of the writer, sitting within sight of the gilded dome which dominates the modern Athens.

Another of the contributors, frantic with the fear of hydrophobia, declares that one hundred and fifty persons have died from the bites of dogs during the past eighteen months, and believing, as he says, that a single human life is more precious than that of the entire canine race, calls for the destruction of every dog running at large without a muzzle. Some may dissent from this opinion as to their comparative value. For myself, I hold that the life of many a dog is worth more than that of many a city official, lobby member, or congressman. The dog does his duty according to his knowledge; the man often devotes himself to mischief. I think that something like this has been written before by that noble sportsman and lover of the dog, Professor Wilson, but it will bear repetition in these days of cant. As to the danger from canine madness in the first place, out of ten dogs killed by ignorant persons on supposition of rabies, probably nine are suffering from other diseases. Of ten persons bitten by dogs which are really mad, it has been shown by repeated observation eight or nine escape the disease. So it follows that this nervous contributor, as he walks to his publisher's office, is in more danger of death from a falling tile or brick from a housetop, than from the bite of a dog. Should not tiles and bricks be abolished?

S. C. C.

A CASE OF HEART DISEASE.—We submit the following careful diagnosis of heart disease in a bitch, with an effort to produce artificial respiration, as among the interesting additions to canine physiology. The whole history of the case is due to a distinguished physician in Minnesota:

Sleepy Eye at six months was affected with dysentery and loss of appetite, with general febrile disturbance and rapid wasting of flesh. Symptoms rapidly becoming alarming, but mitigated by active treatment. On examination of the mouth the gums were found inflamed, tense and swollen; brisk friction and pressure over the presenting teeth bringing them to view. A soothing application of opiated glycerine soon brought relief of some of the more distressing symptoms, and under the internal administration of the following powders: Hyd'g. cum creta; pulv. ipecac; Co. aa gr. 3 acid Gallic; pulv. capsicum aa gr. ss. One powder every two to four hours, as required. The heretofore frequent evacuations of blood and mucus were replaced by stools of healthy appearance and consistency; subsidence of all inflammatory symptoms and restoration of appetite. For a few days, continued improvement followed, when it was observed on visiting the kennel that the bitch had eaten about a pint of sawdust, followed by a repetition of the symptoms above enumerated. A dose of castor oil, containing Tr. opit 5 drops, was administered, and acted promptly. Made comfortable for the night. On visiting the kennel in the morning, she was found apparently lifeless—perfectly cold; pupils strongly contracted and undilatable; the mouth and floor about were covered with froth; no perceptible pulse. The treatment during the day consisted of injections of beef tea and port wine, eggs, etc., with external warmth and friction. At 8 p. m. ceased

breathing, and was pronounced dead. After the continuance of artificial respiration for ten or fifteen minutes with electricity, the breathing returned, though irregular. By way of experiment, this was followed by a hypodermic injection of sulphate of strychnia. The only change following this was more uniform respiration, increased action of the heart and movement of the jaw. In this condition she remained till after midnight, when suddenly the heart ceased to act. Further efforts were discontinued.

Autopsy.—Internal organs all healthy, save a portion of the intestinal canal, which was considerably congested (death from this could not have resulted), and an Embolism (clot) in one of the Auricles of the heart about double the size of a walnut, one side being organized fat, the other free and irregular, with fat interspersed—death, no doubt, being caused by Embolic Apoplexy.

This unanticipated condition would suggest as a probable cause, over-feeding, with insufficient exercise, this noble young animal being almost entirely confined to a small kennel. The importance of artificial respiration should not be overlooked in any case of suspended animation, and those who witnessed its effects in the present case will, I am sure, fully appreciate its application.

ST. PAUL BENCH SHOW.—Mr. Charles Lincoln writes: "The whole State of Minnesota is interested in the bench show to be held at St. Paul Sept. 2d to 7th. The prize list will embrace nearly all breeds of dogs, with two additional classes that have not been given at other shows—viz., champion native English setters and English retrievers. The cash prizes will amount to nearly \$2,000. Besides, a large number of special prizes will be given, as a committee has been appointed for that purpose. The committee hope to receive a good representation of Eastern dogs, as exhibitors can after the bench show enjoy some of the best shooting the country affords. Chicken shooting will be at its best, and from the accounts given by the sportsmen here, the prospects are that there will be a vast number of them; more than for many seasons past, as the mild winter has been favorable to them. It has been suggested to hold a meeting during the bench show to arrange for a field trial the following week. In any event the members of the club propose forming parties for a week's shoot in this wonderful country. It will be a splendid opportunity for the sale of dogs, as they are very anxious to improve the breed of dogs which they now have. The hotel accommodation is good, and at very reasonable rates. The show will be held on the grounds of the State Fair Association, in a large building specially erected for it. There is also over fifty acres for the dogs to exercise on. The committee, by a unanimous vote, have asked Mr. John Davidson to act as Judge. Mr. W. S. Timberlake, the secretary, will be glad to give any further information. I am quite sure that sportsmen visiting here will be pleased with the welcome they receive from the hands of the committee. Prize lists will be sent out next month.

DOGS BROKEN.—We call particular attention to the claims of Mr. E. S. Wamaker as a dog breaker. Having resigned his position from the Westminster Kennel Club, Mr. Wamaker is now prepared to devote his time to breaking dogs. Dogs given to Mr. Wamaker's care are thoroughly educated, and taught practical lessons in the field with game. As a person thoroughly conversant with dogs, Mr. E. S. Wamaker is well known to the public. [See advertisement.]

MASSACHUSETTS KENNEL CLUB.—Boston, June 22.—Mr. W. H. Cowing having resigned his position as President, Dr. J. Nelson Borland has been elected to fill his place.

VISITS.—Springfield, Mass., June 21.—E. H. Lathrop's field dog Dick to his Luna, same strain as Dick.

ROCK-JESSIE.—Mr. L. Bowser's (Franklin, Pa.) field setter Rock—Belton-Dimple—full litter, brother of Sanborn's Nellie, to his bitch Jessie—Pride of the Border-Kate—June 20 1878.

YACHTING NEWS.

COLUMBIA YACHT CLUB REGATTA.—For once a match was sailed this season in as fine a breeze as any one could wish, and the Columbia Club must consider itself fortunate in hitting upon such splendid sailing weather as a kind Providence vouchsafed them on Friday, June 21. The steamer *Port Lee* went over the course with a large party of friends and spectators. All classes went over the regular club course from the stakeboat off Seventy-ninth street, around one at Glenwood, a mile or so above Yonkers, on the Hudson. The starters were as follows: Cabin yachts, first class—*Libby B.*, 36ft. 11in., H. Schwarz; *Emma*, 37ft., William H. Rowe. Open yachts, second class—*Eureka*, 29ft. 9in., John Klaus Nobles; *Gem*, 21ft. 9in., L. P. Wiegman; *Belle*, 21ft., J. C. Perine; *Columbia*, 20ft. 7in., Abner Ingles. The wind was moderate from the S.S.E., and the tide making flood. *Eureka* was first away, crossing the line with her boom to port, and making a close shave of the stake boat. *Emma* second on *Eureka's* weather-quarter, and a short distance astern of her the Vice-Commodore's famous *Journeymen* with a red-capped crew. The latter was handled by Mr. McWhinney himself, and her well-known record made her a favorite from the start, but somehow, owing either to a new crew unaccustomed to work together or to too great care on the part of her owner, she did not fill expectations. On his weather was *Libby B.*, a handsome sloop, but not a particularly speedy one alongside of Mr. Rowe's big working boat. The latter,

though not strictly a yacht and not built for racing, proved a tough customer for the fancy ones. *Columbia* and *Belle* crossed half a minute later, and lost some of the breeze which carried the first boats across in line style. A quarter of a mile astern of the rest, *Lydia T.* and *Laurel* brought up the rear. The Commodore's handsome sloop lay at anchor, and many were the regrets that he did not make sail and try his luck with *Libby B.* The skipper of *Eureka* laid a straight course for the upper mark, while the rest kept closer in to the weather shore to take the gusts as they came down through the hills, and make the most of the tide which sets in on the west shore. *Lydia T.* was well handled, and soon dropped *Columbia* and *Belle* and ran up alongside of *Libby B.* While abreast of 125th street she was gaining on her, leading half of the fleet, but then ran out of the wind for awhile. The four leaders at this point were pretty well bunched, with *Nettle* leading *Emma* and *Journeyman* to windward and a little astern, and *Eureka* out in the river. When 150th street was reached *Emma* ran through *Nettle's* lee, and *Libby B.* fetching into a nice streak of wind again dropped *Lydia T.* It was not long, however, before *Nettle* gave her big sister the go-by once more, for the tremendous rig she sported was doing good service with the quattering wind—her sails set like boards. Below Spuyten Duyvel the wind fell light and prospects looked gloomy, *Eureka's* crew standing up to catch all there was going. During this let up *Nettle* went ahead and took the lead in earnest. Above the creek the yachts had shaped themselves into two lots, with a half mile between them, *Libby B.* still leading the second half of the fleet. The creek had no sooner been past than the wind went around to the east a little, and came out strong and in puffs. This sent big *Emma* ahead, whereupon she took in her jib topsail, all hands going forward to stow it, putting her down by the bows and letting the smart *Nettle* once more to the front. This order was maintained up to the mark, which *Emma* was the first to jibe around. *Nettle* would not risk it, and tacked, while the Vice-Commodore let his boom go over to starboard, thereby gaining considerably upon *Snedeker's* craft, even it did put combings under and a bucketful into the cockpit. *Eureka* tacked around the stake boat, and all the above then stood across to the Jersey side, gunwales under and crews laying out to windward. It was now a beat home with a long leg and a short one, the mark being rounded as under:

Name	N. M. S.	N. M. S.	N. M. S.	N. M. S.
Emma	1 26 00	Lydia T.	1 34 30	
Journeyman	1 26 24	Columbia	1 37 05	
Nettle	1 26 52	Belle	1 39 50	
Eureka	1 27 50	Gem	1 39 50	
Libby B.	1 30 30	Laurel	1 41 53	

Lydia T. tacked around some four minutes after *Libby B.* The latter stowed her jib topsail and jibed, while *Columbia* and *Belle* followed suit. *Gem* being the only one among the cats to tack around. *Laurel*, hitherto bringing up the rear, jibed around short in good style, and was soon up on the weather-quarter of *Gem*, who had manned her pumps, and gave the latter a bad blanketing and dropped her. All hands were now making short boards off the Palisades, and working to windward as best they could, with the flood still strong against them. *Eureka* got a little bit of a knock down, but was luffed out in good shape. *Nettle* held a wonderful wind, and headed a full point higher than any of the rest. Of course she very soon worked way out to windward of everything, and, standing up like a steple with canvas, that was simply perfect, her performance was really wonderful to behold. Never before do we recollect seeing so smart a craft, such a fine suit of muslin and such perfect tooling as *Dave Snedecker* was giving the craft in his charge. With the same man at the tiller we would back her against anything on either river. *Libby* doused topsail and did not seem to hold as good a wind as the rest, while *Journeyman*, for some unaccountable reason, sagged way off to leeward. She did not seem to be herself at all. Her jib was kept lifting, often even spilt, when her rad was not so much as wet. Who was tending jib sheet in her? *Nettle* was first to tack to the E., but not relishing the tide in the middle, stood in again after a short board. Breeze freshened and *Emma* sent topsail on deck. Among the cats, ex-Commodore Joseph Noble's *Laurel* was doing well and pointed high; likewise *Gem*. *Lydia T.* carried away her jib-halliards, and was from that time unfortunately out of the hunt. Abreast of the convent, *Nettle* had screwed out to windward of the lot something like $\frac{1}{2}$ mile, in a manner that was simply astonishing. With the exception of occasional stretches out into mid-channel, the fleet bugged the Jersey shore all the way down till the bend in the river was reached. From there a long leg brought them down abreast of the club-house. *Laurel* had weathered everything in her class and was close up with *Libby B.*, her competitors $\frac{1}{2}$ mile to leeward. *Eureka* was well handled and weathered on *Emma* just above Manhattanville. By the time the creek was fetched on the beat home wonderful *Nettle* was almost hull down ahead. *Journeyman* in the meantime had been making a better thing, keeping mid-river, and what with the ebb having set in and luffing her out often in the way of half-boards, she was rapidly picking up on *Eureka* and *Emma*, besides having a more weatherly position, when suddenly a gust struck her and down she went in spite of flowing head sail. For a moment it seemed as though she were lost, but finally righted, chock full of salt water and down to her deck. No time was lost in baling her out. Peak was dropped, a reef taken down, and once more the Vice sent her off for home. *Eureka* and *Emma* were crossing tacks down the Jersey side, when the former carried away her jib-halliards, delaying her for some time. Not long after they parted a second time, but a hand was sent aloft and repaired damages. *Nettle* reached the line first, and making a short tack to the E. shore, stood across a winner of a most remarkable race, the best the metropolis has witnessed this season. *Emma* crossed a good second, and *Columbia*, of the fourth class, third. This cat boat was well tooled all day by Com. Kreimeyer, the boat being a stiff and fast craft. She held a good wind all the way down. *Gem* followed with a couple of short boards, and *Libby B.* next. *Journeyman* crossed 5m. later. A summary of the match is added:

Name	Start.	Finish.	Actual Time.	Corrected Time.
Emma	12 04 10	4 21 31	4 19 21	4 19 21
Libby B.	12 05 02	5 18 30	5 13 28	5 13 18

OPEN YACHTS—FIRST CLASS.

Name	Start.	Finish.	Actual Time.	Corrected Time.
Eureka	12 04 10	4 54 15	4 50 05	4 50 05
Journeyman	12 04 50	5 18 55	5 14 05	5 11 55

OPEN YACHTS—THIRD CLASS.

Name	Start.	Finish.	Actual Time.	Corrected Time.
Nettle	12 04 52	4 16 40	4 11 48	4 11 48
Lydia F.	12 07 23	Not taken.		

CAT RIGGED—FOURTH CLASS.

Name	Start.	Finish.	Actual Time.	Corrected Time.
Laurel	12 10 00	4 47 50	4 37 50	4 37 50
Gem	12 07 12	5 13 35	5 06 23	5 00 23
Belle	12 05 35	Not taken.		
Columbia	12 05 23	Not taken.		

Emma beats *Libby B.* 53m. 57s., winning in her class;

Eureka the *Journeyman*, 21m. 50s.; *Nettle* wins her class prize and the pennant awarded the yacht making the quickest time over the course; *Laurel* the cat-rigged prize; beating *Gem* 22m. 33s.

LYNN YACHT CLUB REGATTA.—The eight annual regatta of the Lynn Yacht Club was sailed over the usual courses, June 17, in a light southwest wind. Seventeen boats entered. *Magie* won in the first class, *Expert* and *Mule* in the second, and *Mabel* and *Nymph* in the third class.

MARINEHEAD YACHT CLUB.—For the fifth annual regatta, June 17, there were entered two first class boats, eleven second class boats, twenty-four in the third class, five in the fourth and five in the special class. *Thistle* took the prize in the first class; *Gall*, *Lottie*, *Napoleon* and *Mystic* won in the second class; *Veronica*, *Unknown*, *Eugene* and *Posey* in the third; *Rose*, *Acts* in the fourth, and *Icy* and *Sarona* in the special class.

NEWBURYPORT YACHT CLUB REGATTA.—There were thirteen entries for the first annual regatta of this club, June 17. The wind was light and from the S. W. *Bohemian* won in the first class, *Torrent* in the second and *Keturah* in the third.

EASTERN YACHT CLUB.—The rendezvous of this club at Swampscott, June 17, the anniversary of the battle of Bunker Hill, was interfered with materially by unpleasant weather, not many of the fleet putting in an appearance.

THE UNION REGATTA OFF NAHANT.—Owing to the bad weather June 17, the entries for the Union Regatta of the Boston and Dorchester Yacht Clubs were meagre. The schooner *Breeze*, of the first class, had a walk-over, but was disqualified on account of taking wrong course. In the second class the keel sloop *Shadow* had also a walk-over. In the third class four yachts started. The *Wanderer* withdrew and the *Sea Bird* took the prize, beating *Volante*, keel sloop, and the *cat Fancy*. In the fourth class four starters were sent across the line, *Psyche* coming in first, *Druid* second.

JERSEY CITY YACHT CLUB REGATTA.—Owing to light winds and want of hallow canvas *Pirate* was beaten by *Genia*, the owner of the former not intending to sail her, until at the solicitation of friends she put in an appearance at the starting line without light canvas and with her bottom foul. On the run home *Genia* boomed out her head canvas while *Pirate* suffered severely for the want of her pole. As it was, however, *Pirate* gained nearly twenty-two minutes on the way down to the southwest spit and crossed the finish eight minutes or more ahead. After re-measuring the boats, the race was given to *Genia* on time allowance, though with light canvas aboard the *Pirate* the result would probably have been different.

NEW YORK BAY REGATTA.—The judges for this regatta will be Mr. A. Cary Smith, P. W. Ostrander and M. Roosevelt Schuyler. The names of these gentlemen stand so high in yachting circles that they will inspire confidence in the coming race and induce many entries.

THE SEAWANAKA OCEAN RACE.—This race has been postponed until fall. So much the better. Big schooners need a breeze and a lop, which is more than one can expect in June.

LONG ISLAND YACHT CLUB REGATTA.—Though over thirty yachts were entered, only nineteen sail came to the line, the calm having prevented many craft from the suburbs reaching the start in time. The steam yacht *Burgess* was placed at the disposal of the judges and went over the course. The yachts starting were as follows: First-class cabin—*Dudley Hope*, *Sophia* and *Twinkle*; second-class cabin, *Reveille*, *West Wind*, *Admiral Rowan*, *Minnie T.* and *Marie*; first-class open, *Fannie K.*, *Nettle*, *Chauncey M. Felt* and *Martha M.*; second-class open, *Excelsior*, *Faith* and *Sadie*; third-class (cat-rigged), *Hi Pi*, *Johannie B.* and *Gypsy*. Course for first-class from Frank Bates' Short Branch House, around Buoy No. 8 $\frac{1}{2}$; for all others, around Buoy No. 17 near Robbins' Reef, thence around Fort Lafayette and back to starting point. Messrs. Jas. Lennox, Wm. Pegg and Chauncey M. Felt acted as judges. The *Hoped* led across the line, with the *Twinkle* second, *Dudley* third, *Sophia*, C. M. Felt, *Fannie K.*, *Reveille*, *Admiral Rowan*, *Minnie T.*, *Nettle*, *Johannie B.*, *Marie*, *Excelsior*, *Gypsy*, *Hi Pi*, *Faith*, *Martha M.*, *Sadie*, and *West Wind* in the order named. Wind light from the S. *Hoped* led down to the buoy in her class, *Reveille* carrying away her topmast owing to too much reef on her jib topsail halliards. *Nettle*, whose wonderful performance we noticed at some length in our account of the *Columbia* regatta, had been up to her old tricks again. It will be remembered that Dick Wallen has had her in hand this spring, and that Sawyer has had the order for her new canvas. With this, and *Snedeker* at the helm, she led from the start. The same may be said of *Excelsior* in her class. She was built by young McGillhan, who seems to inherit the talent of his father for first-class turnouts. The first round among the smaller ones was made with *Nettle* in the van, *Martha M.* second, and *Excelsior* third. The finish and summary was as follows:

Name	Start.	Finish.	Elapsed Time.	Corrected Time.
Dudley	12 05 78	Not timed.		
Hope	12 06 09	6 23 52	5 27 43	5 21 53
Sophia	12 09 45	Not timed.		
Twinkle	12 08 08	Not timed.		

SECOND-CLASS CABIN YACHTS.

Name	Start.	Finish.	Elapsed Time.	Corrected Time.
Reveille	1 10 25	Disabled.		
West Wind	1 14 34	Withdrawn.		
Admiral Rowan	1 10 01	5 55 24	4 44 33	4 36 33
Minnie T.	1 14 30	6 15 59	5 01 29	4 51 19
Marie	1 14 30			

FIRST-CLASS OPEN YACHTS.

Name	Start.	Finish.	Elapsed Time.	Corrected Time.
Fannie K.	1 08 10	6 05 09	4 56 58	4 56 58
Nettle	1 14 50	6 23 56	4 09 26	4 07 06
Chauncey Felt	1 07 15	5 53 56	4 51 41	4 48 51
Martha M.	1 14 30	5 59 22	4 44 52	4 43 22

SECOND-CLASS OPEN YACHTS.

Name	Start.	Finish.	Elapsed Time.	Corrected Time.
Excelsior	1 14 30	5 52 53	4 38 23	4 33 23
Faith	1 14 30	5 52 16	4 37 46	4 37 06
Sadie	1 14 30	Withdrawn.		

THIRD CLASS (CAT-RIGGED).

Name	Start.	Finish.	Elapsed Time.	Corrected Time.
Hi Pi	1 14 30	6 10 04	4 55 32	4 55 32
Johannie B.	1 14 13	Withdrawn.		
Gypsy	1 14 30	6 31 25	5 16 55	5 16 55

The *Hoped* wins the first cabin class; the *Admiral Rowan* wins in the second cabin class; the *Nettle* wins in the first open class; the *Excelsior* wins in the second open class, and the *Hi Pi* wins in the third open class.

FIDDER-VICTORIA AGAIN.—As noted in these columns, Commodore Grinnell, after banding to Mr. Roosevelt the championship pennant of the Central Hudson Yacht Club, won by the latter in his sloop *Victoria*, again challenged him for a second race in accord with the rules governing the holding of the pennant. The race came off June 19, one day after the regular annual regatta of the club. There was a light breeze from the N. and a strong ebb tide, when the two yachts got away at 11:30 A. M., *Victoria* leading across the line 1m. 19s. ahead.

Fidget weathered on her opponent, and turned the Van Rensselaer buoy about a minute ahead. On the run down *Victoria* set topsail, and both boomed out their jibs. Off Jew's Creek *Victoria* caught a strong streak of wind and closed the gap; but *Fidget* soon felt the same breeze and again went to the fore. The starting line was passed with *Fidget* leading by a minute and a half, and when the Law Point buoy was reached the lead had been reduced to eight or nine seconds. On the bent back *Fidget* got slightly the better of Mr. Roosevelt's crack, and led her by nearly two minutes when passing the starting line on their way north. The wind had increased and come out from the N. W. When the buoy at Van Rensselaer Point had been turned the second time, sheets were again eased and jibs boomed out, the home buoy being passed for the last time with *Fidget* leading by 1m. 20s. Below New Hamburg *Victoria* blanketed the Commodore's boat in a bad way, and, passing, gained all the way down to Low Point buoy, rounding full 2m. ahead. *Victoria* trimmed aft flat, but her rival showed the stuff in her by handsomely weathering on her and outrunning her as well, finally crossing the line a winner by only 43s., as under:

Name	Start.	Finish.	Actual Time.	Corrected Time.
Fidget	11 40 00	4 57 31	5 17 31	5 13 20
Victoria	11 39 44	4 55 47	5 19 03	5 19 03

There is a possibility of Mr. Van B. Livingston's *Flyaway*, of West Park, being matched with the Commodore's sloop before long. We believe this was the first race *Fidget* sailed under her new sloop rig, and the result will probably encourage Mr. Grinnell to keep the jib on her. In the above match she carried five hands against seven of the *Victoria*.

ONEAGH CRUISING EASTWARD.—The British yacht, *Oneagh*, has arrived at Boston June 18. Her owner takes no interest in American yachts. Possibly he thinks discretion the better part of valor.

QUINCY REGATTA.—The Quincy Yacht Club sailed its first championship regatta of the season June 21. There were a large number of entries and a fair breeze. *Imp* parted her main-stay and lost a portion of her false keel. *Rocket* and *Annie V.* fouled, the former parting her halliards. Prizes were awarded as follows:

First Prizes—*Folly* (first class), *Nattie* (second), and *Psyche* (third).
Second Prizes—*Vision* (first class), *Wildfire* (second), and *Imp* (third).

GRAY-SURPRISE MATCH.—A match was sailed at Belleville, June 20, between the yachts *Katie Gray* and *Surprise*, for \$200 a side, over Big Bay course, distance about twenty-five miles. The *Katie Gray* came in the winner by 6m. 38s. Time, 2h. 47m. A good breeze, a glorious day, no accidents, and a large attendance, all tended to make it a successful affair. The Belleville Yacht Club propose taking weekly cruises during the season. The fleet will sail out of the harbor every Friday afternoon and remain under the directions of the Commodore during the sail. Kingston, not to be behind in water sports, will hold a regatta on Dominion Day, the prizes being as follows: Second-class—First prize, \$65; second, \$30; third, \$10. Third-class—First prize, \$25; second, \$10; third, \$5. Barrie, a smart town north of Toronto, and which boasts of the possession of the fine Kempenfeldt Bay, has also got an attack of the water fever, and healthy development of aquatic interests is looked for. Races have already taken place, and a number more are talked of. An-Mix.

NEWBURYPORT REGATTA.—The fifth annual regatta at Newburgh will be sailed July 10. There will be five classes, corresponding to the following lengths: From 26ft. upward, from 23 to 26ft.; from 20 to 23ft.; and for less than 20ft. The fifth class is for catamarans. Entrance free. Course for first, second, third and fifth classes, 20 miles; for fourth class, 15 miles. Prizes—1st class, \$125; 2d class, \$75; 3d class, \$50; 4th class, \$25, and same for 5th class. Time allowance for three leading classes, 2m. to the foot; for 4th and 5th class, 1m. 30s. to the foot; measurement taken on water line. Designating numbers will be furnished by the regatta committee, to whom all captains must report before 10 A. M. on the day of the race, and from whom information can be obtained, with charts of the courses. Regatta Committee—A. S. Ring, T. P. Ramsdell, J. C. Griggs, T. Donoghue, J. H. Weddle, J. T. Sloan, J. C. Adams, M. H. Hirschberg, H. C. Higginson and W. M. Trask.

WELL DESERVED COMPLIMENT.—Mr. F. C. Sumichrast, of the Nova Scotia Yacht Squadron, has been elected honorary member of the Yacht Racing Association of Great Britain.

—We are in receipt of many club books and pamphlets of yacht clubs, notice of which has been deferred. The senders will please accept our thanks.

YACHTING DRIFT.
* Mr. Phoenix's steam yacht *Vidette* is very handsome on deck, outside she partakes a little too much of the *Ideal* style, though a much more graceful model. Cutter *Eaterprize*, of Boston, is said to be a very handsome boat and a fast sailer. *Nettie G.*, formerly a sloop of New York, has been altered to a schooner in Boston. *Mattie* and *Posey*, of Boston, will sail again owing to dispute concerning second prize in regatta of June 1. A number of yachts have left for that paradise "down East," among them *Volante*, *Intrepid*, *Columbia*, *Mystic*, *Fleetwing*, s.s. *Ibis*, *Seawitch*, *Wenonah*, *Nettie*, *Restless*, Mr. A. De Cordova has purchased the s.s. *Mystic*. *Lila* is the name of a new yacht sent to Savannah from New York. *Dreadnaught* went ashore off Mamaroneck, June 22. Her regular captain was not on board at the time. *Comet* has challenged *Peerless* for the Bennett Challenge Cup, recently won by the latter at the N. Y. Y. C. regatta on the 14th inst. Catamaran *Nerid* has done the same. Surely this latter must be a joke. *Mohawk*, alias *Eagle*, has had her masts cut down eight feet in accord with suggestions made in these columns. Trouble about the judges of the Fourth of July regatta in Boston. *Violet*, of Boston, has been sold to N. Y. parties. *Frisco* will soon have its new club-house open. *Frolic* beat *Ariel* on the wind at the Golden Gate. Lead and iron on keels is becoming the order of the day down East. *Magie*, of Queen's Cup fame, hails from Boston. *Casco*, a Pacific venture in the building line, is said to be a success. In the Trenton regatta, June 20, *Ellis* came in first, *Belle* second, and *Champion* third.

OAR AND PADDLE.
MISSISSIPPI AMATEUR ROWING ASSOCIATION.—Peoria, June 21.—The first annual regatta of the Mississippi Amateur Rowing Association is now a thing of the past. A few pools were sold on the evenings of the 18th and 19th, and a few on the mornings of the 19th and 20th, but the letting was light. On the evening of the 18th the annual meeting of the association was held, at which the following officers were elected for the ensuing year: President, J. C. Osgood; Vice-President, J. A. St. John; Secretary and Treasurer, A. S. Porter; Commodore,

C. L. Williams, Vice-Commodore, P. C. Wheeler, Ensign, F. W. Gould. The morning of the 19th dawned bright and clear. Just before the races commenced a slight breeze sprang up, causing a ripple on the water, but not enough to interfere with the rowing. At 3.28 p. m. the first race was called, which was the Junior four-oared shells, with the following entries, who took their places as follows:

1. Burlington Boating Association, Burlington, Iowa (orange).—O. M. Schenck, bow, weight 140; E. E. Osgood, 2, weight 135; J. S. Denslow, 3, weight 145; C. W. Bodemann, stroke, weight 140.

2. Peoria Boat Club, Peoria, Ill. (color white).—Herbert Walker, bow, weight 159; C. S. Cockle, 3, weight 180; G. W. Weddle, 3, weight 150; G. J. Brown, stroke, weight 165.

3. Modoc Rowing Club, St. Louis, Mo. (color tan).—W. Welch, bow, weight 128; H. Assman, 2, weight 134; J. Stumplitz, 3, weight 125; C. Fischer, stroke, weight 144.

4. Mitchell Rowing Association, Milwaukee (color of how oar, cap dark blue).—J. K. Berkhauser, bow, weight 130; O. Warner, 2, weight 148; H. C. Ludwig, 3, weight 146; A. J. Richter, stroke, weight 130.

5. Sylvan Boat Club, Moline, Ill. (color cardinal).—W. V. Cooper, bow, weight 128; J. M. Waters, 2, weight 132; B. Parregy, 3, weight 142; W. H. Lewis, stroke, weight 143.

6. Farragut Boat Club, Chicago (color light blue).—C. S. Downs, bow, weight 135; G. T. Muchmore, 2, weight 135; Frank Booth, 3, weight 155; F. M. Staples, stroke, weight 140.

When the signal was given to start the Burlington crew withdrew from the race, leaving the other five to go over the course. At the end of the first half mile the Farraguts gave up, having broken an oar, which left but four competitors in the field. The Sylvas crew rounded the mile buoy first in 7m. 13s. At the end of the first half mile the Peoria caught up within two lengths of them, and maintained that position to the finish. The following is the time: Sylvas, 13m. 12½s.; Peoria, 13m. 32½s.; Mitchell, 14m. 53s.; Modoc, no time.

The second race was for double sculls, same distance as four-oared shells, one mile and repeat. In this race there were but two entries.

1. Minnesota Boat Club, St. Paul.—H. M. Butler, bow, weight 130; W. H. Hyndman, stroke, weight 140.

2. Riverdale Rowing Club, Riverdale, Ill.—C. S. Downs, bow, weight 130; C. A. Billings, stroke, weight 150.

At the start the St. Paul Club took the lead and turned the stake boat in 6m. 23s. From that time to the finish they maintained the lead, doing some very fine and rapid rowing as they neared the home-boat, crossing the line in the following time: St. Paul, 14m. 42½s.; Riverdale, 15m. 22½s.

The next race was the six-oared harge, one and one-half miles straight away, with but two entries.

1. Peoria Boat Club (color white).—W. R. Cockle, bow, weight 185; H. B. Skule, 2, weight 151; W. P. Townsend, 3, weight 140; W. W. Hook, 4, weight 160; B. Allison, 5, weight 146; W. C. Beasley, 6, weight 164; J. Taylor, Coxswain, weight 145.

Burlington Rowing Association, Burlington, Iowa (color orange).—E. S. Phelps, bow, weight 140; C. E. Osgood, 2, weight 135; J. S. Denslow, 3, weight 145; C. W. Bodemann, 4, weight 140; Theo. Bishop, 5, 135; C. M. Schenck, 6, 140; T. M. Garrett, coxswain, 120. At the start the Peoria crew took the lead and held it to the finish in the time as follows: Peoria, 9m. 26s.; Burlington Rowing Association, 11m. 20s.

The next race was the Junior single scull, one mile and repeat, with the following entries: Farragut Boat Club, Chicago—T. R. Eddy (color brown), weight 155; Riverdale Rowing Club, Riverdale, Ill.—C. A. Billings (searlet), weight 150; Sylvan Boat Club, Moline, Ill.—J. R. Fleming (orange), weight 140; Farragut Boat Club, Chicago.—H. P. Darlington (light blue), weight 127. At the end of the first half mile Eddy dropped out, leaving but three in the race. Fleming, of the Sylvan Club, was an easy winner, doing some very lively spurring as he approached the home line. Time as follows: Fleming, 16m. 37½s.; C. A. Billings, 17m. 20½s.; H. P. Darlington, 18m. 13½s.

The last race of the day was the tub race. Sixteen entries were made, but only ten started. This was won by Charles Barnard, of the Sylvan Club. This ended the programme for the first day.

The morning of the second day, June 20, broke clear and cool. The first race of the day was that of the small sail boats owned here, but called for the occasion "yachts." The following named yachts, with captains' names given, were entered. The course was three miles and return. W. F. Tower entered yacht *W. F. Tower*; C. Hefell, *Treat*; R. Dahlke, *Warner*; H. Walters, *Kitty Cat*; Dahlke, *Cutter*; G. T. Gray, *Fannie*. The race was won by *Kitty Cat* in 1h. 30m.

The first race of the regatta was called at 3:20 p. m. The wind had gradually been increasing, and it was feared the water would be too rough to row, but the judges decided to let the boats start. This race was the senior four-oared shells, one mile and return, with the following entries: Sylvan Boat Club, Moline.—C. A. Barnard, bow, weight 138; Jas. Roseborough, 2, 132; W. V. Cooper, 3, 128; Ben Parregoy, stroke, 142. Farragut Boat Club, Chicago.—C. S. Downs, bow, weight 135; G. T. Muchmore, 2, 135; Frank Booth, 3, 160; L. H. Jones, stroke, 150. Madison Boat Club, Madison, Wis.—C. F. Slightman, bow, weight 135; W. Fielmann, 2, 150; A. J. Reuter, 3, 160; E. L. Hills, stroke, 150. When the word was given the crews started as follows: 1st, Sylvas, with a stroke of 39; 2d, Madison, with a stroke of 38; 3d, Farragut, with a stroke of 37. The Sylvas turned the stake boat two lengths ahead, closely followed by the Madisons, who made the turn in as quick and pretty shape as has been seen on any course. The Sylvas proved too much for them, however, and crossed the home line, winners by three lengths. The following is the time: Sylvas, 14m. 1½s.; Madison, 14m. 33½s.; Farragut, no time.

This next race was for double sculls, one mile and repeat. There was but one entry for this, by the Madison Boat Club, of Madison, Wis. The names of the rowers are as follows: C. F. Slightman, bow, weight 135; Wm. Fielmann, stroke, weight 150; time, 16m. 39s. The time was very good, considering that they had the wind and waves to battle with, in addition to having just rowed over the course in the four-oared shell.

The next race was the four-oared gig, with two entries; distance, one mile and return:

Peoria Boat Club, Peoria, Ill.—H. Walker, bow, weight 159; C. S. Cockle, 2, weight 180; G. W. Weddle, 3, weight 150; G. J. Brown, stroke, weight 164; E. S. Pulsifer, coxswain, weight 121.

Burlington Boating Association, Burlington, Iowa.—J. C. Osgood, bow, weight 140; C. W. Bodemann, 2, weight 140; J. S. Denslow, 3, weight 145; C. M. Schenck, stroke, weight 140; C. E. Osgood, coxswain, weight 135.

The Peoria crew took the lead at a stroke of 36, closely fol-

lowed by the Burlington crew with a stroke of 37; but their stroke did not seem to be heavy enough, for the Peoria crew turned the one mile buoy from four to five lengths ahead, making the turn completely just as the Burlington crew reached the turning point. At the three-quarter point on the return both crews did some spurring, and crossed the home line as follows: Peoria three lengths ahead, with a stroke of 38, and the Burlingtons bringing up the rear with a stroke of 40. Peoria, 15m. 45s.; Burlington, 16m. 2½s. This race was closely followed by the Senior single scull race, with three entries:

Minnesota Boat Club, St. Paul, W. H. Hyndman, weight 140; Minnesota Boat Club, St. Paul, H. M. Butler, 130; Sylvan Boat Club, Moline, J. R. Fleming, weight 140. At the van Hyndman and Fleming got away abreast of each other, start Hyndman with a stroke of 37 and Fleming with a stroke of 33. Although Butler started with the same stroke as Hyndman, he immediately dropped to the rear, and at the one-half mile he dropped out of the race entirely. It might be doing him justice to say that he had no boat of his own here, and was forced to use an old boat belonging to the Peoria Club. His time is said to be fully equal to that of Hyndman. Hyndman gradually gained on Fleming and turned the flag three lengths ahead. Fleming made a poor turn, and by the time he was completely turned Hyndman had widened the gap to some nine or ten lengths ahead. Fleming did his best, however, but was unable to overtake Hyndman, and they crossed the home line in the following time: Hyndman, 15m. 18s.; Fleming, 16m. 12s.

This race concluded the boat-racing, and then came the Commodore's review. This was one of the prettiest sights of the day. Last of all came the swimming race, which was won by Chas. Barnard, of the Moline Club.

On the evening of the 25th the prizes were distributed at Rouse's Hall, where a grand reception was given to the visiting clubs by the Peoria Boat Club. In conclusion, I might say the regatta was an entire success, every one seemed well pleased, and it is estimated there were 10,000 visitors. The Moline Club were the most fortunate of all, taking away with them five prizes. The members of the press were all well taken care of, and they are all indebted to H. Knowles and S. J. Kilduff, who were the committee on the arrangements for the press.

EMPIRE NAVY.—The second annual regatta of this organization was rowed at Peekskill, June 18. The water was lumpy, but gradually smoothed down. The Palisade four-oared shell beat Highland and Harlem tours; time, 12m. 48½s. In the pair-oared gig race the Highlands beat Resolutes, of Carmansville, and Palisades; time, 16m. 25s. In the double scull race the Highlands had a walk-over. In the junior sculls H. Morse, of the Resolutes, beat H. W. J. Telfair, Harlem; R. G. Jackson, Palisade, and J. C. Seymour, Highland; time, 16m. 41s. The remaining races were rowed on the upper course. Sculls.—H. P. Dain, Highland, beat A. Moffat, senior, Palisade, in 15m. 43s. Eight-oared Barges.—Resolutes beat Palisades in 14m. 13s. The regatta was a great success.

NEPTUNE ROWING CLUB.—July 15, their spring regatta was rowed with fine weather and smooth water. In the pair-oared shell race A. T. Shand and F. L. Rodewald beat O. T. Johnson and T. R. Keator; time, 6m. 6½s. In the single sculls F. L. Rodewald beat L. Morris; time, 7m. 17½s. In the four-oared barge race A. C. Sharp (bow), S. E. Whitman, W. C. Rowland, R. T. P. Fiske (stroke), and J. W. Edwards (cox.) beat W. J. Roberts (bow), J. W. Fuller, D. S. Babcock, Jr., R. P. G. Bucklin (stroke), and B. Beckwith (cox.); time, 16m. 46s. In the four-oared shell race F. L. Rodewald (bow), L. W. Morris, S. Pratt, and A. T. Shand (stroke) beat O. T. Johnson, J. W. Edwards, T. R. Keator, and C. King (stroke) in 6m. 21½s.

HARLEM REGATTA.—The annual June regatta of the Harlem River Association took place June 22. The Nassau and New York Athletic Clubs refused to enter against Messrs. Walsh and Leven, disqualified by the N. A. of A. O. but allowed to row by the Harlem authorities. This reduced the entries materially, and left the two gentlemen a walk-over in the pair-oared race, as well as the Nautilus Club in the four-oared race. Captain R. J. Cook acted as referee; courses as usual. In the junior scull race, called at 2 p. m., Childs got the best start, while Gaisel soon passed him and Lyon drew up even with Newton in the rear. Gaisel crossed the line in 6m. 14½s., Lyon second, Newton third, and Childs last, having ceased pulling too soon. In the pair-oared race, Walsh and Leven had a walk over, time 6m. 38½s. In the senior scull Rathbone was the favorite. Gaisel was the first to get away, but Rathbone quickly passed him, pulling a quick stroke. Mills dropped to the rear. Rathbone led across the line in 6m. 20½s. by a length and a half, Gaisel second. The winner of this race already holds the diamond sculls won from P. C. Ackerman on a foul. Only one entry in the junior gigs by the Columbia College Club. Time 6m. 14½s. The Nautilus four had a walk over, while the six-oared gigs were started only a few seconds later. The Dauntless gig (with coxswain) won easily in 5m. 34½s., beating the Gramercy crew and overhauling the Nassau four on the way. In the last event, four-oared gigs, the Nassaus beat the N. Y. Athletic Club, time 5m. 17½s.

ALOYONE BOAT CLUB.—The Brunette crew defeated the Blondes through an accident to the latter in the six-oared race, time 12m. 20s. In the four-oared race *Flirt* beat *Couquette* in 12m. 24s. The day's racing was finished by a most enjoyable social evening party, at Mr. W. C. Langley's, at Bay Ridge.

SILVER LAKE, MASS., REGATTA.—Despite bad weather the Silver Lake Regatta was as successful as all such events generally are in the East. Perfect order and discipline prevailed, and so far as the rowing was concerned there was nothing left to be desired. Under the auspices of the Eastern Rowing Association the regatta was fixed for the day of the anniversary of the Battle of Bunker Hill, June 17. The first race on the list was that for the junior scullers. The prizes were a silver cup to the first and a pair of Donoghue sculls to the second. The starters were: Jeffrey Eager, of the Shawmut Club; Frank Turner, of Boston; John Marrow, of Boston; D. Breen, of the West End Boat Club, and Charles E. Curtis, of Lowell. Curtis won in the excellent time of 15m. 15s.; Breen second, Marrow third, Turner fourth and Eager fifth. The principal event of the day was the six oared race among amateurs, for which the *Boston Herald* offered a handsome piece of silver ware. The *Boston Herald*, through its very complete and thorough reports of Eastern rowing affairs, deserves the thanks of the boating fraternity for the great benefit accruing through the *Herald's* enterprise and liberality. Five six-oared crews came to the start out of the six entered; the Narragansett, Shawmut, City Point, Lakeman and Dauntless. The Dauntless crew made the worst start, and the Shawmut's lead at the first half-mile, pulling a stroke of 43, City Point

37 and Dauntless 38. Narragansett snapped their steering wires soon after the start, the Lakemans fell astern. Near the mile, City Point was ahead and Dauntless three-quarters of a length astern of them. At the upper stake Dauntless had come out in front with a lead of a quarter of a length only after a close struggle, the New York crew making a splendid turn, owing to their having a coxswain, and soon after the turn had gained three lengths. City Point spurred gallantly and somewhat closed the gap. In the meantime the Shawmut six turned the upper stake some three lengths behind the City Point crew, with Narragansett and Lakeman in the rear. Finally the Dauntless crew crossed the finish, a winner by two lengths, time 19m. 11s. The crew from New York was composed of: Dyer Pearl (bow), Wm. S. Ridabock, C. E. Knapp, W. G. Demarest, H. W. Walker, David Rouch (stroke), John Kyle, Jr., (coxswain). In the professional four-oared race the Union crew, of Portland, Faulkner crew, Mahoney crew and Lowell crew made a fine contest. The Mahoney and the Boston fours led at the mile, Lowell a good third, and the Unions fourth. Faulkner made a bad turn and then stopped his crew to avoid collision with the Unions coming up. The Mahoney crew this got the lead, but the Boston crew, putting on a terrible spurt, closed again, and at the two and a quarter mile were in the van once more, pulling a stroke of 32 against the Mahoney's 36. The Faulkner-Reagan crew kept their lead and came in winners in 18m. 49½s. by a good length, Mahoney second, Lowell third and Union fourth. The race for the four-oared working boats for a purse of \$200, the race for the Lakeman crew No. 1, time 19m. 55s., resulted in favor of the professional single scullers' race the distance 3 miles. In the professional single scullers' race the starters were: Johnson, Williams, Kennedy of Lowell, Rourke of Lowell, Mahoney, Plaisted and Kelley. Johnson was the favorite, and took the lead at once. At the mile Plaisted came out to the front with a good lead and kept the race well in hand. He turned four lengths ahead, Kennedy and Johnson turning next, almost together, around the same stake, and a collision became the inevitable result through "Frenchy's" fault in having picked up the wrong stake and being in the other man's water. This let Lynch go around second and O'Rourke third. Plaisted had in the meantime been lying coolly on his oars and the other two had passed him, but it was not long before he had overtaken them and sent his boat across the finish in fine style, after stopping a second time, in 21m. 43½s.; John A. Kennedy second in 21m. 50½s., Johnson having given up; Lynch third in 21m. 52½s.; Lawrence fourth; Johnson, D. Kennedy and E. Williams in the rear. The *Herald* Cup was presented to the Dauntless crew at the Globe Theatre with appropriate formalities and speech making.

COURTNEY-DEMPSY RACE.—Though Courtney played with his rival all the way up, he suddenly was thrown from his boat by fouling a submerged wire, as he claims. To say the least, this is a tough yarn to swallow, and as no evidence whatever has been found to substantiate Courtney's claim, the whole affair looks like a disreputable trick in concert with the gamblers. It is strange that Courtney finds it so difficult to get accommodated and is always getting into snarls in his races. Though the blame in his latest fiasco has not been fixed upon any one as yet, the whole thing is calculated to throw a bad reputation upon all concerned, and Courtney will suffer with the rest. The judges decided to row the race over again, but Dempsey declines, and there the matter rests. They will meet again at Skaneateles.

HANLON-MORRIS RACE.—Pittsburghers generally are out of pocket, as they ought to be. Hanlon, the Canadian champion, has now finished up about everything excepting Courtney, and his pull on the Allegheny shows him to be a pretty tough customer over a distance of any kind. Both Hanlon and Eph Morris were in fine condition on the day of the race, June 20. The course was the same upon which Morris won the championship originally from Coulter. The start was effected at 6:10 p. m. Hanlon took the lead immediately, pulling 34 to the minute. At the mile Morris made a vigorous spurt, and as he reached the bend was gradually closing the gap. Near the buoys, however, Hanlon had again spun out his lead considerably, but the Pittsburgher bettered his position somewhat. From the turn Hanlon kept the lead all the way home, pulling a very long and graceful stroke of 28, and shot across the line with four lengths to spare in 37m.

NEW LONDON NOTES.—New London, June 17.—The Thames Rowing Association are building a boat-house 70 feet long by 20 feet wide, and 15 feet to rafters; will be ready for occupancy by last of week. Time of rowing Yale-Harvard race not yet decided, but the hour of eleven proposed. From an experience of three years' rowing a shell boat at all hours of the day, and a season's daily practice, I find that the hours to 8 a. m. and from 4 p. m. are the only hours when they may reasonably expect good water. At eleven it is generally rough or windy, a breeze coming in from eight and dying off about four.

THE HENLEY REGATTA.—The Shoe-wac-cae-mettes and Mr. Lee are in daily practice on the Thames. The Columbians are improving, and are better liked. The Western men, of course, are not much thought of by the lightly-trained British crews, nor does Mr. Lee seem to give them any anxiety. We see it noted in English papers that the above crews represent the championship of America. They do nothing of the sort, and we must protest against any such flimsy assumption. The Watkins Regatta has been fully exposed in these columns, and however creditable an English victory may be, they will not have met the real American champions at all.

ROWING RIPPLES.—In the Mystic regatta on the Passaic the Idler crew won the pair oared gig race in 7m. 5s. J. W. Adams won in the single sculls in 5m. 28s., and the Kate K. crew took the prize in the pair-oared shell race. The Freeborn crew won in the four-oared scrub race. Ariels have built a new boat house, and Mystics expect to lay out \$2,500 in a fine structure on the Passaic. Buffalo Bill is a new six-foot candidate at the oar. Courtney has him in hand at Owasco Lake. Harvard freshmen have put up their boat house on the same lake for their race with the Cornell crew. Geo. W. Lee will pull a paper boat in England. The Northwestern regatta will be held at Detroit in July. Beaver Boat Club has been organized at Windsor, Mich. J. Reagen now pulls stroke in the Boston Leverett four. Union Boat Club, Boston, has sold all its old boats owing to the present great demand for boats of any kind. Frenchy Johnson prefers paper boats. Wallace Ross thinks he can beat Hanlon. The race between them takes place July 25, on the Kennebecasis. Why does not Reagan row Plaisted? Best time made from Putney to Mortlake is 23m. 15s., made by Chambers against White in 1860, and by Renforth against Kelley in 1865. Higgins will keep the Newcastle, Eng., champion cup, having won it three times. Boston appropriates \$2,000 for the Fourth of July regatta. Frenchy Johnson will not go to Toronto, but at

tend races at home.....Raritan beat Rutgers College, June 13, for the championship of the river.....Warren Smith and Wallace will pull a three-mile race between July 10 and 20, on Bedford Basin, Halifax.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Centropristis atrarius</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Achoerargus probatocephalus</i> .
Land-locked salmon, <i>Salmo gairdneri</i> .	Striped Bass, <i>Morone americana</i> .
Black Bass, <i>Micropterus salmoides</i> .	White Perch, <i>Morone americana</i> .
<i>M. nigricans</i> .	Weakfish, <i>Cynoscion regalis</i> .
MacKaigoe, <i>Roxo nobilior</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Spanish Mackerel, <i>Cybitum maculatum</i> .
Yellow Perch, <i>Perca flavescens</i> .	Cero, <i>Cybitum regale</i> .
	Bonito, <i>Sarda pelamys</i> .
	Kingfish, <i>Menticirrhus nebulosus</i> .

TROUT FLIES IN SEASON FOR JULY.

Little Egg, No. 12.—Body and feet of orange and yellow, mohair and hare's ear mixed; wings, bright hyaline, slightly mottled; aede, same as wings.

Lightning Bug, No. 10.—Body of equal parts, of dark brown, and black mixed, tipped with yellow; feet, of feathers from the English grouse; wings, double, the inner wing black, the outer wing a yellow brown.

General Hooker, No. 9.—Body made of bright yellow and green, ringed alternately; feet; red hackle; wings, of the tall feathers of the ruffed grouse.

Little Claret, No. 11.—Body and feet, dark claret mohair, slightly tinged with blue; wings, of the bittern, or brown hen; aede, dark brown.

Claret Fly, No. 9.—Body, dark claret; feet, black; wings, of the brown hen.

Fetid Green, No. 10.—Body, feet and wings, a pale green.

FISH IN MARKET—RETAIL PRICES.—Bass, 18 cents; blue fish, 6; salmon, 18; mackerel, 18; ahad, 40; weakfish, 10; Spanish mackerel, 20; green turtle, 10; halibut, 15; had-dock, 6; king fish, 20; codfish, 6; black fish, 12; flounders, 8; porgies, 8; sea bass, 15; eels, 18; lobsters, 8; sheepshead, 15; Canada brook trout, 50; Long Island brook trout, 51; pompano, 75; whitebait, per pound, 51; hard crabs, per 100, 93; soft crabs, per dozen, \$1.50.

CANADA—Grand River, June 14.—The net fishing throughout the whole Gape District has been unusually good. The angling is just commencing. The salmon are not only numerous, but unusually large. We expect great sport. There has been an almost continuous rain during the ten days preceding the 12th inst.

IMBRIE.

NOVA SCOTIA—Halifax, June 18.—Two anglers back from a Restigouche fishing trip, report salmon plentiful and fine, and they back up their report by showing 33 splendid specimens. They were only absent eight days. One of the fish weighed 36 lbs., and the average weight of the lot was about 20 lbs.

SALMON ON THE RESTIGOUCHE.—The following letter from a correspondent is quite interesting. The presence of a fish bone in the stomach of the salmon would indicate, as the writer observes, that the fish had but quite lately left the sea:

Halifax, June 19.—While fishing on the Restigouche last week my companion killed a male salmon weighing 36 lbs., and upon opening it we found a part of the back bone of a small fish about two and a half inches long in its stomach. It was killed in Cross Point pool about forty miles from the salt water. The Indians thought it was the bone of a caplin. Now that fish must have come up very quickly from the sea to have not digested the fish. It is, I believe, very unusual to find anything in the stomach of a salmon in fresh water. In eight days, with two rods, we killed 33 fish averaging 22 lbs each.

G. W.

NEW BRUNSWICK.—Just in from a week at Kilburn Lake where trout fishing is excellent. I took 28 speckled trout in two hours last Monday afternoon. Largest weighed 2 lbs. 6 oz., and gave me some good fifteen minutes work. N. S. Dickey and W. W. Curtis, of Boston, were with me for the week. Jno. Stewart, Supt. of N. B. & C. R., of St. Stephen, was our guest two days. At Skiff Lake the other day two of us caught forty land-locked salmon in one day.

C. L. W.

MAINE—Machias, June 20.—Eighty-eight trout, four ounces to two pounds weight, is the catch this season up to June 15. Some nice dinners, I remember, as well as the catching.

S. B. H.

MASSACHUSETTS—Ashburnham, June 18.—Some good strings of trout have been caught here lately. One basket of seventeen weighed fifteen pounds, and one of fourteen weighed thirteen. Largest single trout, two pounds, which is large for brooks fished as they are here.

H. C. D.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals at this port the past week has been 77; 44 from Georges, 14 from the Banks and 19 from mackereling trips. The receipts from the Banks have been 257,500 lbs. codfish and 252,900 lbs. of halibut. The Georges fleet have met with continued good success for the season, the receipts amounting to 1,050,000 lbs. of codfish and 43,000 lbs. of halibut. The reports from the mackerel fleet are indicative of poor success thus far on this shore. The season, however, has not far advanced, and a good spirit would quickly change the mackerel fishery, and cause rejoicing among the owners and the fishermen. The first Bay fleet of forty sail are now getting ready and will soon be away.—*Cape Ann Advertiser*, June 21.

—Two Gloucester fishing schooners have fitted for a summer trip to the Greenland coast halibut fisheries. This is the first trip to those grounds since 1873.

FISHING AT HELL GATE.—Bass fishing at Hell Gate has afforded sport for a week past. On the 18th seventeen were caught. Mr. Wade caught twelve, average two pounds; Mr. Irwin two, one five and one two pounds, and Mr. John Rodgers, the champion of 33 and 25 pounds last year, caught one weighing 7½ lbs.

SUPREME SALMON.—At the invitation of Messrs. Abbey & Imbrie, the well-known manufacturers of fishing tackle, we called on Mr. Sutherland, of Liberty st., to look at some of the

finest salmon we have seen for a long time. These fish were caught by General Arthur, Collector of the Port of New York, and by R. G. Dunn, Esq. Seven fish in all had been caught in one day by these able fishermen in the Cascapedia. The largest fish weighed 50 pounds, and was 4 feet ½ inch in length, with a girth of 2 feet 3. The other fish weighed 38, 35 and 28 pounds. The fish were all clear run fish, in superb order, and had been only three days en route from the river. What a whizzing of tackle, what a clicking of reels, what a bending of upper and middle joints there must have been, and how the butt must have been called into play! and then the gaffing, and the excitement, and the doubts and fears, and the triumph about it! All these things were recalled to mind, as we saw these slabs of silver, with fins and tails, lying all quiet and peaceful on Sutherland's marble floor.

GREENWOOD LAKE.—Bass and pickerel still afford fair sport, but are more successfully taken with trolling spoon than with a fly. The hotels are in perfect order and already well patronized considering the weather of the past month, and only require a few bright, warm days to fill up. The Montclair and Greenwood Lake Railway deserve great credit for the promptness and regularity with which they have run their trains despite the discouraging influences of a late rainy season and consequent light pleasure travel. Every provision is made for the comfort and convenience of the traveling public, the elegant Pullman parlor car "Phaeton," Mr. Gilbert conductor, being regularly run on the 4:30 p. m. train to, and the 7 a. m. train from, the lake, at the remarkably low rate of twenty-five cents extra fare. It is currently reported that the company contemplate making at an early date a reduction in the rate of fare to Greenwood Lake, of which, when done, due notice will be given.

GREENWOOD.

—Fishing reports from the Thousand Islands record fair sport with rock and striped bass and pickerel.

NEW JERSEY—Forked River, June 24.—Bluefish, sheepshead and weakfish keep all hands busy.

ARTHUR.

Barneget Inlet, Kinsey's Ashley House, June 23.—Sheepshead, bluefish, blackfish and sea bass are the catches now.

B.

TENNESSEE—Memphis, June 20.—Fish have been biting freely in the neighboring lakes for some weeks past, and many fine strings have been shown. Hopfield and Marion Lakes have become depleted from the constant and out-of-season attacks of pot-fishermen, and afford sport no longer. Ten Mile Bayou and Burnt Lane hardly uphold their reputation of former seasons; but Blackfish is the Mecca of the initiated. One man caught 150 black bass trolling in one day. Trout (hass), white or speckled perch, hream, goggle-eyes, (crappie or dominicker), striped bass, etc., are found there in incredible numbers, and are caught with but little trouble.

P. C. H.

THE FLINT RIVER SQUADRON—Nashville, Tenn., June 13.—This is the rather peculiar name of a club of four gentlemen who pass a great deal of their time angling during the season. They often go out for two and three weeks together. Their last expedition was to Flint River, striking it at a point near Winchester, fishing down to near Fayetteville. They have a large boat, capable of carrying all their camping outfit, and a smaller boat of Bond's make for excursions up the smaller streams. The Flint is a tributary of the Tennessee River, and is one of the best stocked streams in the State. The water is free-stone, very clear and cold, and has been less seined and trapped than any other I know of. They took a great many trout (hass) and perch. Mr. Goodrich tried artificial flies, and trolling with a silver-spoon bait. As fly fishing was a novelty in that part of the country, considerable curiosity was manifested as to the result. The spot first fished in was a mill-pond, from the dam of which Mr. G. made his casts. Although the water was exceedingly clear, and he in that exposed position, at the second cast he took a fine perch (here called goggle-eye), and at the third a striped bass. Several striped bass were afterward landed, one weighing nearly three pounds. The fly used was black body with white wings. Quite a number of fine trout (hass) were taken while trolling. In a few days the club start off to Elk River, another tributary of the Tennessee. This they will descend to the mouth, a distance of nearly 200 miles, where they intend launching their boat. They are to have as guests two gentlemen from New York, one of whom has already fished with this club before, and who says he knows of no place North where he can have such sport as he enjoyed on his first visit here. I have made diligent inquiries from a number of sources, which, added to my own knowledge of the country, and I can safely say that there are few localities better adapted to the sportsman than our State. Could we induce the Legislature to pass protective laws and have them enforced, it would not be many years before our streams would all be full of magnificent fish.

J. D. H.

MICHIGAN—Grand Rapids, June 15.—Trout fishing in our northern streams is good. Parties from this place and abroad are flocking thither, and it is estimated that at least two hundred fishermen are now on the Jordan, Rapid and Boardman rivers and their tributaries. A small party from here returned last week from a few days' trip to the Jordan, and brought with them 150 pounds of brook trout averaging half a pound. Another party of two from here has just returned from the Boardman, near Mayfield; absent four days, and caught 400 fine trout. Musketoes have not been troublesome. Fine pickerel and bass fishing in Grand River, and in nearly all the small lakes surrounding this vicinity, and in the northern part of the State.

H. B. W.

WISCONSIN—Neenah, June 13.—The fishing here in Lake Winnebago is excellent; never saw it better. Black and silver bass, pike and pickerel caught in large numbers and of extra good size. A few shad taken. A gentleman and two ladies at Roberts' summer resort the first of the week, in two days with hook and line caught 301 bass and pike, and your correspondent went out fishing Thursday the 13th, noon, and caught sixty bass and pike. This I call good sport.

C.

"KILL YOUR FISH WHEN CAUGHT."—Another correspondent, signing "Grim," of Pottsville, Pa., recommends the method of inserting the finger in the mouth of the fish, and bending the head backward, almost parallel with the back, when the spinal column is severed at the neck, and life becomes extinct almost instantly.

For Forest and Stream and Rod and Gun. BLACK BASS FISHING.

"To sit upon the river's brink
And see my quill or cork down sink,
With eager bite of perch or dace."

WALTON.

THE most remarkable circumstance about all the writing on the subject of fishing, is the extreme reticence of all the writers as to definite information upon the subject of the kind of lines to use, the bait to use, and the size of hooks. One honorable exception, leaving out garrulous old Izak, is "Hallock's Gazetteer," than which no better compend can be found in the world. Of rare literary excellence, it is practical in all its details, and should be in every angler's hands. As to black bass fishing: In the first place, there is very great confusion in the nomenclature of many game fish. In the "Elkhorn," a stream in the blue grass region of Kentucky, there is a fish called bass. He is no more like a bass than a salmon is like a red perch. Loug, slender, and as guinea as a speckled trout, he is the prince of all the game fish for hard, stubborn fighting, and quick, subtle movements, which disconcert the ordinary angler, and leave him oftentimes fuming upon the bank, over the loss of "The finest bass, sir, in Kentucky." The same fish can be found in "Fork Lick," a tributary of the Licking. They are not yellow bass, nor are they black bass. You see I believe in "yellow" bass. I do, natural history to the contrary. To tell me that the slender, finely formed yellow bass is only a black bass, but of a different gender, is to stultify me and all other anglers. I have caught yellow bass and black bass out of the same stream, and have gone home and studied them. They are distinct fish. I believe it; and were this not a paper in which scientific discussion would be out of place—that is, I did not start on science—I would give the reasons for the faith that is in me. Should any French gentleman wish to break a lance with me on this subject, he is invited, with all due courtesy, to give his opinions in FOREST AND STREAM. I promise him some facts that will startle the one-bass theorists; and I promise him that, if confuted, I will yield, if not gracefully, at least cheerfully. I have caught bass, black and yellow, striped and spotted, and green, with fine reels and rods, and give me a long light cane in preference to anything in the shape of a rod. A cane eighteen feet long, one inch in diameter at the butt, with a perfect taper to the end, which should not be larger than a knitting-needle, is the rod of rods for bass fishing. Now take three strands of the very coarsest black silk that you can find, twist them thoroughly, lay them cable fashion, wax them, and you have your line. Make the three strands twenty feet when you commence twisting, and your line will be seventeen feet long when you have finished. Make five or six such lines and carry them with you. Put a bucket at the bottom, six inches above the hook, which should never be larger than No. 5; salmon hook; use a cork if you fish in still water, and if not, not. Hook your minnow through the back fin, and here your small wired hook does the work, for it does not kill your minnow. Fish on the bottom if you fish in the spring of the year, and half way if you fish in autumn or summer.

With such tackle I will kill more bass day by day than the most enthusiastic lover of the reel and braided lines and ounce sinkers. Has any one who is a finished angler, ever thought of the vast difference between pulling a fish whose weight you can feel all the time and pulling one whose weight you can never feel in full, for fear that your rod should break or your line snap? In fishing, as in all things else, as our years increase, we fall back upon a severe simplicity, characteristic of our infant days. I remember once, on a bright May morning, going to a mill in Kentucky, then famous for its bass fishing. Fifteen anglers, good and true, were standing on the dam, and these fifteen had caught nine fish. On a ledge of rocks, below the dam, stood two ragged boys, fishing with long, taper, sycamore poles! They had lines made of black flax, three strands to the line, and well waxed. They had a small rifle bullet on their line, and no cork. They had caught thirty fish, some of which would have weighed six pounds, and they sold them to the gentlemen anglers of the rod and reel, who threw their lines to within six feet of the place where the ragged disciples of the art piscatorial were "pulling 'em!" and they caught nary one! Colonel, that lesson sunk deep into my mind. The water was very clear and bright, and the bass were too sharp to be taken with lines that were large enough to hang a man, leaving out bass. And five rifle balls on the line! And a painted cork as large as my fist! *Ecco signum!* "But," says some timid brother of the rod, "will three strands of coarse black silk hold a bass?" "Try it, brother, and you will thank me forever! The main reason for using such lines, apart from the question of searing the fish, is the great increase of the sport. Of course, the smaller and the lighter the line you double your chances for bites, and your fish pulls—seemingly—double as hard. But the rod must be fast—the rod I have named above—or say good-by to your line; for a bass, when hooked, means business, and is quite as lively and game as a bream, with three times his weight.

In such fishing there is true pleasure. No reel to foul; no losing your fish at one hundred and fifty feet; no excretions upon the man that made the rod, the line, the reel, but a quiet peace with all things. I know how pleasant it is to hear the click of the reel. I know how you feel when the fish makes his first leap for freedom, way down the river, under the overhanging branches of the big sycamore. I know with what exultation, having subdued his first wild rusbea, you watch the line cutting the water and speculate as to weight. I know all this; and yet, I prefer a light cane rod. But the most killing bait for bass of any kind—black, striped, rock or green—is the crawfish. The rock bass—called red-eye in Kentucky—feeds almost entirely on crawfish, when he can get them. He—the "red-eye"—will bite at the leg of a "peeler" crawfish, when no other bait on earth can tempt him. He is a bold biter, and, with the tackle I have named, gives fine sport.

Judge Bibb, of Frankfort, Ky., by acclamation elected by the angling guild *Premius* Professor of the Gentle Art, was accustomed to say that "red-eyes" were only fit for women and children to catch. The Judge was an artistic angler. All of his appointments were of the most exquisite character. From the burnished reel to the slender tip of his long rod, all indicated the gentleman and true sportsman. But, finished angler as he was, the Judge was badly beaten once on the Kentucky River.

One bright morning in June, some thirty years ago, the Judge was seated at the mouth of a small creek that empties into the Kentucky River, now, as then, a famous fishing ground. The sun had mounted high in the heavens, and not a single bite had rewarded the patient watch of the expectant angler. Hearing heavy footsteps behind him the Judge turned his

head and saw a brother angler, whose type can be found only in "Old Kaintuck." With a rod longer and heavier than a Kaffir lance on his shoulder, and an old coffee-pot full of crawfish in his right hand, he stalked up to the Judge's fishing ground. He attached a "peeler" crawfish to the hook at the end of a line, about the size of a wheel-band, then sticking his poplar pole into the ground he looked round at the Judge with a patronizing smile. Soon a five-pounder jerked his infantile tree into the water, when, with a mighty effort with both hands, he threw him out over his head. Five times did that heathen throw a fine large bass over his head, and five times did the Judge, by a mighty effort, restrain the righteous anger that boiled in his bosom. For the sixth time did that inhuman violator of all the rules of angling go to his old coffee-pot for a new "peeler." But as he unkinked himself for the sixth bass the Judge met him, fire in his eye and a club in his right hand. In a solemn, judicial tone, he spoke as follows:

"My friend, you have murdered five fine bass this morning, and as an officer of the State of Kentucky I am compelled by the unwritten law of the land to kill you! I could stand fishing all the morning and catching nothing with a minnow, but when you come into my presence with a poplar pole twenty-five feet long, with a line taken off your plow horse, and crawfish! and catch bass and throw them over your head, why, you must die!"

How the matter ended I know not; but some say that the fellow "comp'd" by giving the Judge all his crawfish.

Ah, me! and I started to write of bass fishing, and I have said nothing of that at all, but have let my pen wander at its own sweet will among the bright memories and the dearly-loved associations of my boyhood. I could write an article on bass fishing which should be so severely scientific that no one would read it. But I promise one on this superb game fish, in which I shall attack everybody, and no doubt get a sound drubbing for my pains. Fraternally, J. W. ST. CLAIR.

Lavertonville, Ga.

For Forest and Stream and Rod and Gun.

CATCHING GUDGEONS (Dotted Silver-sides), *Chirostoma Notata*.

"Despise not the day of small things," therefore, while your readers, Mr. Editor, are reveling in the recitals of your correspondents of their catches of "big fish," how they have to "play" them; how to "start" them from their "sulkiness"—to "give them the butt," to "net," to "gaff," and all the rest of fish lore, let one who has tried these devices, and luxuriates in the recollections thereof, tell some of the sport of catching little fish.

There are numerous fresh water streams near the city of Baltimore, similar to scores of others more remote—all flowing into the Chesapeake Bay or its estuaries, which are the resorts of the gudgeon during its spawning season—say from early in April until beginning of June. During this period the fish come in countless numbers, actually crowding the rivulets as they force against the current to their spawning beds, which are as high up the streams as they can reach. The first mill dam or cascade of, say three feet in height, stops their career. Between this barrier and tide water is the space which the angler seeks, and with the smallest hooks attainable, baited with gentles or earth worms, generally succeeds in taking all he desires. The fish being a delicacy of the table second to no other, is too highly esteemed to be recklessly thrown away, and their beauty and innocent appearance (this is literally a fact) appeal strongly and successfully even to the typical small boy, who, with his pin hook, having caught ten dozen, winds up his tackle and declares he has "got enough," and that it is "a shame to catch any more." At some of the favorite resorts for the gudgeon, which are also those most accessible, may be found "the man and his net," with meshes small enough to serve as a fly trap, dragging the water, thereby spoiling the angling and securing for himself a monopoly, the proceeds of which he disposes of to the disappointed rod-fishers, whose ambition is to take home their baskets full and boast of their special good luck.

Imagine a clear, sparkling brook, just before it reaches tide water. Its banks carpeted with close grass, interspersed with the early spring flowers; the young leaves beginning to cast shadows from the trees that line its banks. A good little company of "nice folk," some ladies, and children a few, are tolerated; then to see the least skillful draw up the "doublets" with a gentle little scream, and the query, "What am I to do with them?"—the ready assistance of cousin John or uncle Tom, and the rapid recurrence of the scene, while John and Tom wish they could get a chance themselves to cry out for help from Mollie or Jennie to secure their prizes. The luncheon is eaten; the sun is low in the Western horizon (where it generally is at sun-down), and the whistle of the locomotive summons "all a-board" for home. Oh! the anticipation of to-morrow's breakfast!

The process of preparing the fish for table is very simple. The scales are so delicate as to require for their removal only the necessary handling to remove the gills and viscera. The usual mode is to cook in hot lard, butter or olive oil (the first is the best), taking care to use cracker dust or corn meal sufficient to keep the fish separate. Served as hot as practicable. Break off the head, a touch of salt (no other condiment is permissible), and two fair bites—on your part this time—and you have a taste of the finest fish in our waters.

To take these little beauties artistically, requires the smallest tackle to be procured. A "spreader," to be procured readily at the shop, or easily made by turning loops into the ends of a lady's hair-pin, admits two hooks or fine gut. A small float—quill preferred—good bait, and with a light red rod, the outfit is complete.

The gudgeon lingers in the tide water, near the mouth of the fresh brooks long after the spawning season is passed, and may often be taken as late as December, if the ice does not freeze them to deeper water. At this present time the small fry are just hatched, and may, by careful observation, be seen on the surface of the stream floating downward to seek such quarters as instinct may dictate. Whether they remain with the adults at the head of the tide, or near it, during the winter months, is not yet ascertained.

A recent issue of your hebdomadal answers my question at close of article "Gudgeons," viz., wherein is the difference between English "whitebait" and "American gudgeons?" The gudgeon cannot be the immature progeny of any other fish (as the whitebait is said to be herring, alewives, etc.), as it (the gudgeon) is full of spawn, and runs up stream on shoals (or schools) of both sexes. The young fry (about a quarter of an inch in length) are coming down stream abundantly, and the season to take the mature fish is practically over by the first of June.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wiletsville, Conn."

Remember that our Problem Tourney closes July 1, 1873. We expect that all our friends will enter at least one set.

Problem No. 19.

Tourney set, No. 15. Motto: Crossing the Danube.

White to play and give mate in three moves.

NOTES.

(a) The attack derived from this ally does not turn out as strong as might appear, if the defense answer on the seventh move, as in the present game; and we should, therefore, think that P-K Kt3, often adopted in similar situations, would also answer in the present case, e. g.: 6—P-K Kt3, 6—B-Q Kt5; 7—B-Kt2, 7—P-Q4; 8—P-K5 P, 8—Kt-K5 P; 9—Castles, and if Black takes the Kt with the B, White will ultimately obtain a strong attack by B-Q R2.

(b) This move, we believe, an American invention, and its illustrations in the present game cannot, we believe, be quoted in evidence against its soundness, though the attack finally succeeds.

(c) We should have preferred Q-R4 first. White could not then answer Q-Q3, for in that case Black would still capture the K P with the Kt; and, if White defended by B-Q2 or B-Q3, then the continuation of P-Q4 became still stronger.

(d) Black seems to be trifling with the danger. Surely he could, with greater advantage, first take the Kt with the B checking, and then exchange Queens, e. g.: 12—B-Kt5 ch; 13—P-Kt3, 13—Q-Kt5 ch; 14—Kt-K5, 14—Kt-K5; 15—B-K2, 15—P-K B4; 16—P-K B3, 16—Kt-K B3; 17—B-B5 ch, 17—K-B3; 18—B-B4 ch, 18—B-B3, etc.

(e) Evidently the most promising resource under the circumstances, and apparently also sound.

(f) Time was great object, and the attack had to be taken in hand vigorously, otherwise Black would have forced an uncomfortable retreat of the Kt by B-K3.

(g) B-K B4, with the view of offering the exchange of Queens at B7 was apparently more to the purpose.

(h) The precursor of future trouble, for it weakens Black's tenderest flank where the K has to be defended. Wearisome as it looks, we should have elected to retreat the Kt from K3 to Q sq, threatening B-K3.

(i) The way in which the Professor has accumulated minute advantages, and kept up a puzzling attack, is thoroughly admirable. The brilliant stroke he dealt at this point would have felled many a stout adversary.

(j) But Pan'sen is not dazzled, and coolly gives the correct answer. Simple as it looks, it covers combinations which were certainly extremely difficult to see through. Had he, for instance, yielded to the luring temptation of taking the P, the game might have proceeded thus: 30—P-K5 P; 31—B-Kt3, 31—Q-Kt3 B; 32—R-Kt3, 32—P-Kt3 R; 33—R-Kt3 ch, 33—K-R3; 34—Q-K B7, 34—R-K R sq; 35—Q-K Kt7 ch, 35—K-R4; 36—P-K R3, threatening to sacrifice the Q by taking the K R P, and winning easily.

(k) Mr. Paulsen has confronted the brunt of the hottest attack with remarkable steadiness up to this juncture, but now he fails to grasp security, which we believe was within reach, though it would not appear clear at the first blush. He ought to have moved the R to Q-Kt sq with the object of making his position impregnable by Q-Kt Q sq, unless White took that Kt at once. In the latter case, after the R retaking it, the unmaking of White's Q B would do no harm. The most menacing way of removing the B, was B-Q4, and then Black would simply take it off with the P, and stand the answer of Q or B Kt5 ch with impunity.

(l) Andersen every inch. If the R be taken, Black's Q is lost by B-Q4

no and he cannot give the ch at once, for the Kt would take the B, attacking the Q.

(m) The R is simply swept off without recompense. If Black take the Q, mate follows in two moves, commencing with B-K5 ch.

New Publications.

PRACTICAL BOAT BUILDING FOR AMATEURS. Illustrated. By Adrian Neilson, C. E., "The Bazaar" office, 170 Strand, W. C., London, England. Price 75c.

This is a neat little volume published by a gentleman, himself an amateur, for the benefit of others desirous of following in his footsteps. We can especially commend chapters 1. and 11., in which full instructions are given for drawing plans, calculating the necessary centres, the buoyancy, and other points required in a skillful design. A complete list and description of the tools and materials used in construction will also be found of value in the way of a general guide to the beginner. We say as a general guide, because in America we have a larger range of suitable woods than are at the disposal of amateurs abroad; and also because some of our woods are not rated quite as high for certain purposes as our experience in America justifies. Some of the dimensions for scantling or for siding and moulding size given in subsequent chapters, are rather heavier than we are accustomed to in America, where our superior materials and joiner work has rendered boat construction an art much more elastic and graceful than in England. Still, the principles involved in design and manipulation of course being alike, this work on boat building will be as favorably received in America as it has been in Europe. Among the many designs the book contains, those of the Rob Roy and canvas canoe strike us most favorably. The same may be said of the Canadian bateau, a type of boat with which the author has had experience during his sojourn on this continent.

THE YACHTMAN AND COASTERS BOOK OF REFERENCE, by Capt. Wm. A. Pratt. Case, Lockwood & Brainard Co., Hartford. \$1.75.

We are always glad to welcome anything in the way of professional nautical literature. This branch has so far been very much neglected in America and the nautical public, and particularly our yachtmen, have been obliged to look altogether to England for standard works of information of a modern character. It is all the more pleasing therefore to lay before our readers the work of Captain Wm. A. Pratt and to be able to give his book our hearty approval and indorsement. Navigation has been sadly neglected among the average yachtmen, deterred no doubt by the voluminous character and excessive cost of "Blair's Coast Pilot" and the full Government Sailing Directions. They have trusted largely to good luck and individual knowledge in making a landfall, or picking their way into port. Captain Pratt's work, which is both handy and low priced, will do away with all haphazard sailing, for it should certainly find a place in the library of every cruising yacht as well as in the cabin of our numerous fleet of coasters. The courses and distance, with bearings of lights are given from Cape Hatteras to St. Johns, N. B., together with clear and succinct "sailing directions" for seventy-five harbors, besides storm signals, and other matter valuable to seafaring men. With a hook like this in your locker there is no excuse for running ashore, or mistaking lights. The bearings are magnetic, according to the latest government observations, and will thus afford an excellent means of correcting compasses for local deviation caused by the attraction of a yacht's engine, or ironwork. By making a series of comparisons of your compass and the bearings given in the book on different courses the errors of the compass will be detected and may be calculated in the customary manner. Yacht clubs sailing over the N. Y. C. course will find the directions on page 81 of especial value. All know the difficulty of making out the buoys on the course, especially of a murky day, and how troublesome it is to steer a straight course for the S. W. spit. By following the bearings given by Captain Pratt any buoy can be made and the lights picked up without difficulty. This book appears very seasonable, and yachtmen contemplating cruises South, or East should not put to sea without this handy little volume of directions. It is bound in waterproof covering, printed in large clear type and will in many cases serve instead of charts.

LOYD'S YACHT REGISTER. Lloyd's Register of British and Foreign Shipping, No. 2 White Lion Court, Cornhill, London. James D. Leary, 73 William st., New York.

Through the courtesy of Lloyd's London office and Mr. J. D. Leary, their agent at this port, we are in receipt of the new yacht register just published in England. The appearance of this work signifies the commencement of a new period in yacht building. Hitherto every builder, especially in America, has consulted his own notions and conveniences in proportioning the scantling of his yachts, the owner generally knowing nothing concerning the requirements of strength and durability, and often paying the highest rates for work of the most flimsy and untrustworthy kind. The lack of some authoritative standard to hold the builder to, which could serve as a guide to owners and purchasers, we have always severely felt. Many of our yacht builders having started in life making small sail-boats, have not sufficiently readily increased their scantlings when branching out on a large scale. Their lack of experience at sea, and want of examples to follow, have left upon almost our entire fleet the stamp of flimsiness and unseaworthiness. Happily the excellent standard now set up by the tables in Lloyd's Register will remedy this, the most crying evil in our fleet. Owners, before contracting, will have something upon which they can draw up definite specifications, or be enabled to institute comparison between the class of work being delivered them and what such work ought to be if brought up to the highest grade. We do not wish it to be inferred from this that no deviation from Lloyd's tables are to be contemplated. Far from it; for our workmanship, joinerwork and fastenings especially, are generally of a character so much superior to that made in England that we can well afford to slightly diminish the scantlings given in consideration of longer and wider material and the better workmanship common to American artisans. But the tables are of great value as a definite starting point upon which to base such differences as we may deem permissible within discretion. Even after making all due allowances, it cannot be denied that our yachts are built altogether too light, and a return to sound and long-lived construction will be one of the many benefits we look for through the publication of the Register. It contains, besides the classifications to be assigned to yachts built under the survey of agents, a vast amount of useful and practical information. We do not see that any one intending to build can do better than provide himself with the Register beforehand, and, thus armed, infuse into his builder an amount of information which he will, at the present day, be found to stand very much in need of. The tables include dimensions of all the materials and fastenings for yachts from 15 to 500 tons, whether built of wood, iron or composite, an alphabetical list of yachts, signal letters, and yacht owners. In the table of yachts, tonnage (Thames measurement), dimensions, huller, sailmaker, date of construction, port, fastening, sheathing, engines, etc., are given in detail. There are also full directions as to the manner of having a survey effected, a list of surveyors and their addresses, list of subscribers to the book, and other matter of interest. As a means of obtaining a correct idea concerning the wonderful development the sport of yachting has attained in England, as well as an invaluable book of reference, the Register should be found in every yachtman's library.

Rational Pastimes.

QUOITING IN CANADA.—A simple, homely game that of quito. There is none of the dash of lacrosse or cricket about it, but for quiet recreation the pastime has great merits. Firstly, you may pitch your quoits in the shade with that indolent deliberateness which most befits a warm summer afternoon. Then there are opportunities for nice hair's-breadth measurements on disputed positions, as well as good-natured wrangling, which give a zest to the games. In Canada quitoing as a pastime receives much more attention than is accorded the game in the United States. Of the recent quito matches there a Toronto correspondent writes under date of June 20:

The Caledonia Quoiting Club of Toronto was organized in the year 1874, and has had a varied membership now numbering twenty-five. The officers are John Carruthers, President; John Dickson, Vice President; James Rennie, Secretary. Annual tournaments are held and the championships of the club played for, and also a pitching contest for the championship of the Dominion and numerous other prizes, players from all parts of the Dominion, taking part. Friday, June 14, closed a two-day match at which twenty-six players entered and some very fine pitching was done. Sixty-one points is the champion standard. On opening the game the players are pitted against one another in pairs, by ballot; those not scoring the required 61 retire, and the others draw again and play each other down. In event of an odd number the one drawing the "bye" counts without playing. The following are the different "draws":

First Draw—Geo Sheppard, 61; John Carruthers, 61; Joe Dobson, 61; W Patton, 61; David Purdy, 61; Jas Rennie, 61; John Brown, 61; S Rennie, 61; Wm Bright, 61; R Sylvester, 61; Jas McTague, 61; W J Reid, 61; W Glendinning, 61; J G Malcolm, 28; R McDowall, 33; F J R Mitchell, 13; Jas Brown, 38; Jas Patton, 26; John Dickson, 35; R A Fraser, 42; John Brown, 51; J Allon, 13; H Cameron, 60; Geo Gibb, 42; A J Reid, 56; W Purdy, 46.

Second Draw—S Rennie, 61; Jas Rennie, 61; Wm Bright, 61; W J Reid, 61; Geo Sheppard, 61; Jas McTague, 61; R Sylvester, 61; David Purdy, 58; Walter Patton, 40; John Brown, 37; John Carruthers, 28; Jas Cobson, 59. Walter Glendinning drew the bye.

Third Regular Draw—Wm Bright, 61; Jas Rennie, 61; W Glendinning, 61; Jas McTague, 55; S Rennie, 60; W J Reid, 58. Geo Sheppard drew the bye.

Fourth Draw—Geo Sheppard, 61; W Glendinning, 61; Wm Bright, 40; Jas Rennie, 42.

Final Play—W Glendinning, 61; Geo Sheppard, 59.

After the championship has been decided the number of points can be as agreed upon. The games were then continued to determine third, fourth, fifth, sixth, and seventh prizes. Intermediate first, second and third prizes. Then not to discourage any, a number of consolation prizes were given.

MANHATTAN ATHLETIC CLUB.—Open bandicup games, Club grounds, Eighth Ave., and Fifty-sixth St., N. Y.; June 23. Prizes:—For the one-mile walk and one-mile run, a gold medal to each winner; for the tug of war for light weights, a set of colors to the winning team; for the half-mile walk for schoolboys under sixteen years, a medal. The contests were as follows:

100 Yards Run—First heat, five entries, won in 10½s by T C Thomas, handicap 8yds; second heat, four entries, won in 10½s by G W Carr, handicap 11yds; final heat, won by Carr in 10½s, Thomas second.

One-mile Walk—Thirteen entries, won by J D Freeman, Manhattan A C, in 5m 3s; E W Brown, second; P J Mott, third.

Tug of War—Teams of five men; Scottish-American A C team defeated by Eagle Base Ball Club team in 2m 17½s. Hudson Boat Club team defeated by Harlem A C team in 1m 35s. In a second heat the Eagles defeated the Hudsons in 3m. 45s. Eagles ruled out on charge of foul, and Harlems defeated Hudsons in 2m 23½s.

Half-Mile Walk for schoolboys under 16 years of age—Seventeen entries, won by G Emig, 3m 51½s.

One Mile Run—Ten entries, won by T H Smith M A C, in 5m 2½s; T B Bates, H A C, second; A W Anderson, third.

NEW YORK ATHLETIC CLUB.—The long postponed games of this excellent club are appointed for next Thursday. The list of entries is such as to warrant the expectation of a fine display of athletic skill. There are fifty-one prizes and a proportionate number of entries.

UNION ATHLETIC CLUB.—The entries for the Union Athletic Club, Boston, games next Saturday number eighty-one. Among them are the names of many amateurs whose records rank with the best, and the event promises to be an interesting one.

LACROSSE.—A match at Toronto, Can., last Saturday between the Shamrocks of Montreal and the Torontos, resulted in a victory for the latter.

RUNNING IN CANADA.—In a match at London, Ont., June 15, between J. S. Barnes and G. A. Carruthers, 75yds., even start, Barnes soon gained the lead, when at 6yds. snatched a cord in his leg but limped on, running in 7½s. The physicians say he can never run again.

C. L. W., Cantonbury, N. B.—Write to Edw. Norton, Second Connecticut Lake, via North Stratford, N. H.

R. R. C., Sing Sing.—We can recommend to you Geo. Mercer, Williamsbridge, N. Y., as a dog breaker.

DEER'S HAIR.—The address of the firm you inquire about is Deer's Hair Mattress Co., West st. above Canal, New York City.

J. R. N., Newark.—The man is a rascal. We found him out two years ago and have never allowed him to advertise in our columns.

BOSTON.—From the size of your harrier, as you give it us, we should say he was all right. At the shoulder he might vary from 15½ to 20 inches.

WEBB, Nashua, N. H.—"Woodquests" are unfamiliar to our market men here in the city. It is probably a local name, perhaps for wild pigeons.

FIRST WESTMINSTER BENCH SNOW.—Gentlemen who left money with us for above pamphlet can have same returned by sending address to this office.

J. D. S., Quebec.—We do not think your English water spaniel is true if he has as much curl on the cheek and face as you write about. Liver and white is the right color.

INQUIRER, Clearfield, Pa.—The fyke is a long net, the large openings distended by hoops and offering easy entrance for the fish. Once in the fish cannot get out again.

E. A. A., Watertown.—In shooting at the trap under the Hurlingham rules how is the gun to be held? Ans. The butt of the gun must be held below the arm pit until the word "Pull" is given.

W. T. J., Fort Gratiot, Mich. Address *Science Gossip*, London, Eng., and *The Country*, London, Eng. You may order them through Wilmer & Rogers News Co., 31 Beekman st., N. Y., who import foreign papers.

TAROEZ, Aberdeen, Miss.—You should have made a provision for anch a case. Were our number 73 we should claim the pellet in dispute; and we now think that 73 should be awarded a prize in preference to 49.

J. C. N., Jr., Philadelphia.—You can go in a skiff from Philadelphia to the Delaware Water Gap, but above Port Jervis you will find much hard poling, as the water is low. There are plenty of good camping grounds.

A. L., Newton.—We are pretty certain that our correspondent meant dry Epsom salts. The person sending us the method of treatment can be relied upon. Would be glad to hear from you and your case. Give it to us in detail.

J. F. H., Agnetong.—Is it possible for a crow to be taught to talk, and if so please tell me as near as you can how to operate? Ans. Silt the tongue and the crow will devote his whole newly-acquired faculty to cringing you for your cruelty.

W. F., Troy.—You advise the use of kerosene for mange and lice. Will it take off the hair? How must it be applied? Ans. Rub the kerosene in thoroughly for a few minutes and then wash off with castile soap and tepid water 15 minutes later.

BRIDGEPORT.—These are two scores in dispute: H. 45455, 45455, 55445—69. T. 55655, 44545, 45445—69. Which of these wins? Ans. If shot under the rules of the N. R. A., H. wins, the first 69 having one more 5 in the last round than has T.

C. E. L., St. Paul, Minn.—You will find instructions for building canoes in many of our back numbers. See also book reviews this issue. There are so many different kinds of canoes that we cannot send you particulars until you specify what you want your canoe for.

VAL.—1. Is the — a safe and reliable gun? 2. Will a 12, 30 shoot buck, or duck shot, and make a good pattern? 3. What is the best length and weight for general upland shooting? Ans. 1. Perfectly so. 2. Yes. 3. Just the size you mention, 12 gauge, 30in barrel.

F. P. & Co., Oshkosh.—A spaniel of mine is losing all his hair from one side of his neck. The place has turned greenish and is offensive. He seems dull and is continually twisting his head. Ans. Your description is that of gangrene. The cause should be ascertained and removed.

J. D. H., Nashville, Tenn.—What is a goggle-eyed perch? Ans. A goggle-eyed perch is a strawberry perch, called ohab in South Carolina; croppie in Missouri; grass bass in Ohio; obinkapin perch in Louisiana and sac-a-lai by the Creoles. Its scientific name is *pomoxys hexacanthus*. See "Sportsman's Gazetteer."

W. H., Providence.—Much obliged for information about motor. As to the hammerless gun we are very much predisposed in its favor, though we have not as yet used one. It seems to be quite perfect and we really see no room for improvement. As to construction it is simplicity itself. Like all new things, however, it is objected to.

F. S., Oakland, Calif.—1. Are the firms of — and —, of —, reliable? Is Hallock's "Gazetteer" bound in cloth, or paper, at \$3? and is it a standard work? Do you know from whom I could get back numbers of the *Oologist*? Ans. 1. Both parties most reliable. 4. In cloth, and standard. 5. Address *The Oologist*, Oneida st., Utica, N. Y.

RUFES, Philadelphia.—Much obliged for information. We found out some time ago that Wesley & Son made the guns. It is not surprising, however, that Greener nor Eley knew the make, as the guns are built for the American trade. What we are certain of is this, that the Messrs. Grubb in Philadelphia would not sell them unless they were good guns.

F. B. Y., Trenton.—1. At what time is it against the law to catch black bass in the Delaware? 2. Is there any law against fishing for pike in mill ponds with a hook and line? 3. Is there not a law against fishing with a net in mill ponds and creeks? 4. What is meant by point blank range? Ans. 1. April 1 to July 1. 2. No. 3. Yes. 4. See F. and S. May 30, 1878, page 328.

BAN NONE.—Would not advise glazed tiles for your kennel, but there is a roughened tile which would be better. Sometimes the back of the tile has ridges which we think would be better suited to your purpose than the slippery side of the tile. You must have a gutter. For white-

washing your wooden kennel add some half pint of carbolic acid to your wash.

A. D. B., Carlisle, Pa.—My — 12 gauge gives an average pattern of 391 pellets in 30 inch circle 40 yards, 8½ drs. powder, 1½ oz. No. 7 (317 to the oz.), centre of target 6 inches square, 26 pellets; same charge, 45 yards, target a FORREST AND STREAM, 147 pellets. Would a 12 gauge full choke — do any better? Ans. An excellent pattern and many guns made by crack makers will do no better.

J. B. H., Buffalo.—Deer claws would be objectionable on the show bench. Some 18 months ago a friend of ours was outraged on the receipt of a cocker spaniel (not from your party). It was all deformed, he said. That dog has turned out splendidly and he has refused \$50 for him. Still, we don't know your party and must again hold ourselves perfectly irresponsible of advertisements.

D. L. G., Berghen.—The period of gestation in the bitch does not vary as much as you suppose. The period is something between the sixty-first and sixty-fifth day; before or after that it is abnormal. Consult your calendar as to the date, for you must be wrong. Let her lap all the milk she wants. If raw milk should purge, boil it; then oatmeal is good. Cod liver oil you can give her puppies in about the fifth week.

H. G. P., Providence, R. I.—1. Has the proposed Government trial of "Magazine Rifles" been attempted, and if so with what result? 2. What is style of mechanism of the new Winchester rifle (Hotchkiss patent)? Ans. 1. The ordinance board for trial of magazine guns is now in session at Springfield, having opened on the 18th inst. Have heard no reports as yet. 2. The new "Hotchkiss" is on the "bolt system," having magazine in stock and can be used either as single loader or repeater.

SHRIMPS, New Bedford.—I find salt water shrimp the best bait for black bass. How can I preserve them alive for a day or so? Ans. See our Fish Culture columns to present issue. The following method taken from the "Gazetteer" has stood the test: Put them clean and solid into a basket and place on ice in a refrigerator. If to be carried a distance before used, the basket or box in which they are should be packed in ice. If you are near the water a better method is to keep them in a perforated box in the water.

H., New York.—1. Are the shooting qualities of a — double-barre gun equal to those of others of American manufacture? 2. What will be the cost, and where can I have a hunting coat made? I have the goods. 3. What game is in season in the Catskill Mountains in the months of August and September? 4. What is the price of the game laws of New York and Connecticut of 1878? Ans. 1. Quite so. 2. Consult your tailor. 3. Bears, partridges and foxes. 4. Write the Secretaries of the States and they will send them to you.

W. J. M., Hingham.—1. Is the Danley pocket cartridge loader as good as represented? The price and where to get it? 2. Have a foxhound that is afraid of a gun. How can I break him of gun-shyness? 3. Does the ground about Sea Breeze belong to any club, and what kind of game is hunted (rood and fall I suppose), and time for shooting? Ans. 1. Very good; costs \$1.60. Send to Mr. Squire, No. 1 Courtland st. 2. Hard thing to cure in a foxhound. Cap a gun dead, and expel it, so as to accustom him. 3. What Sea Breeze? There are over so many

G. A. S., Toledo.—I have a number of brass cartridges which have a rent or open seam close to the head or breech part of the cartridge, about one fourth of an inch long. The rent or open seam is large enough to permit the smoke of the powder to issue out. Whenever I fire one of these cartridges in my gun I find they are always hard to extract. Would you advise me not to use them? Are they in any way dangerous to use? Ans. Not so much dangerous to you as to the gun. You might wedge in the head of a shell and have trouble in getting it out. Discard the shells.

A. B. P., Norristown.—1. I am to buy a 40-60 Maynard rifle, and would like to have you tell me how far it can be depended upon to place the bullet in the regulation sized hull's-eye every shot? 2. Which bullet would you advise me to use, the No. 2 or the No. 3 cylindrical? 3. What is the weight of the bullet you recommended me to use? 4. Every one questioned as to how many times the Maynard shells can be shot without danger of expansion, answers, "An indefinite number of times." What number of times can one 60 grain shell be fired—50 times, 500 times, or 5,000 times? 5. Which wind-gauge is the most accurate and durable, the Hart, Remington, or Marlin? Ans. 1. 500 yds., if held properly. 2. The No. 2, the mollin. 3. 2-40 grains. 4. Makers say they will last as long as the rifle. Made out of solid metal. 5. No appreciable difference. (The reason why your first was not answered was because it was anonymous.)

S. B. H., Machias, Me.—I own a small pond about 50 acres, depth of water 15 to 60 feet, now stocked with trout; those caught this season about 13 inches average, well fed. It is good water, no grass except at outlet and inlet—a small spring brook. The outlet is about one mile in length; good bottom for trout. Would it be proper, or would it improve the sporting upon it to introduce land-locked salmon. I am keeping it as a reserve for my family and friends. I do not understand the spawning habits of land-locked salmon. Ans. Your lake seems well adapted to land-locked salmon. The spawning period begins about the close of October and ends in about a month. (See our Commissioner's Report for '78. Mr. Atkins' notes. Page 911). We should not like, however, to trust too small trout in the presence of land-locked salmon, or of the little locked land-salmon with elg trout.

J. T. B., London, Ky.—I want to stock a mountain stream with fish. Please tell me kind to get and where to get them. Runs down and cold all the year. Forty to fifty miles to the mouth, some slight falls and two mill dams on the stream near mouth. Would trout, salmon, or bass be likely to stay above the dam? Cool, deep pools all along and well stocked with minnows of different kinds. Some pike below the upper dam, none above. Got one last week weighing ten pounds between the dams. Ans. Your mountain waters being similar to those of the Tennessee ranges we would advise you to transport mountain trout from Tennessee. Geo. F. Akers, of Nashville, State Fish Commissioner, can aid you. Put mountain trout into the head waters of your streams, black bass (called trout and chub at the mouth) in the middle waters and let the pike breed down below the dams. The bass will probably not run up high enough to encroach upon the trout. To learn how to transport fish refer to our fish culture department in this issue.

C. W. K., New York.—Though we have, with one or two exceptions, no really fast steam yachts in America to compare with the English, our river steamers are universally faster than those abroad. English passenger steamers rarely reach sixteen knots an hour in actual practice, the Dublin Royal Mail packets being the fastest, we believe, in Europe, and they made only eighteen knots on trial at the measured mile under the most favorable circumstances. The Reindeer, on the Hudson, made 116 miles in 4h. 57m., including five landings. Allowing 3 miles an hour for current or tide, gives the speed of 20½ miles per hour as the maintained speed. On a spurt she could reach 22 miles. The Allida averaged 23 miles, the Daniel Drew made 21 miles, not de, including landings; the Chauncey Vibbard ran from Rhinebeck to Catskill, 23 miles, in 1h. 6m.; the Mary Powell has averaged 21 miles, and the Sylvan Dull over 20. Of large ocean steamers, the City of San Francisco, built by Roach & Son, and the Lindero, built by Pusey, Jones & Co., average greater speed on less coal consumption than any English steamers.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, June 28.—Creedmoor: Fifteenth battalion. Regatta: Yale vs Harvard, at New London. Cricket: Philadelphia vs Dorlan, at Nicetown.

Saturday, June 29.—Creedmoor: Remington Long-range; Amateurs' 200 yds.; Seventh Regiment trophy. Nova Scotia Yacht Squadron Harbor Cruise. Union Club (Boston) Annual Spring Games. Cricket: Germantown (84) vs Belmont (20), at Nicetown; Chestnut Hill vs Young America, at Chestnut Hill; Merion (23) vs St. Timothy, at Ardmore.

Monday, July 1.—Nahasset Yacht Club Regatta, at Cohasset, Mass.

Wednesday, July 3.—St. George vs Young America cricket match at Hoboken.

Thursday, July 4.—Regattas: Seawanhaka Annual, at Oyster Bay; Savannah Yacht Club; Detroit, Mich., Open; Danbury, Mass., Yacht Club; Lowell, Mass., Open; Boston City; Buffalo City; Albany Open Amateurs; Royal Benley, Eng. Athletics: New York A. C., at Mott Haven; Staten Island A. C. Summer Meeting; Norwich, Conn., Caldonians; Scottish-American A. C., New York.

GOING WEST.—Charles Hallock, Esq., managing editor of FOREST AND STREAM and ROD AND GUN, left us on Saturday by the Old Dominion steamer en route for the West via Virginia, Kentucky, and Minnesota. His wife accompanies him. He will revisit the territory covered by his trip of last summer. The letters which he then wrote, setting forth its natural attractions, have been so favorably regarded that the Grand Rapids and Indiana Railroad Company traversing Michigan have had them republished in a pamphlet to advertise the road. As Mr. Hallock always utilizes his vacations by bringing new regions into notice, we are pleased to state that nearly all steam lines have been most prodigal in furnishing him every facility for investigation. Mr. Hallock will probably extend his journey to New Mexico, which is now made easily accessible by the recent completion of the Denver and Rio Grande Railroad.

TO CORRESPONDENTS AND CONTRIBUTORS.—An unusual press of material this week has obliged us to defer several articles and communications. We ask the indulgence of our correspondents and contributors.

A CARD.

HALLOCK'S AMERICAN CLUB LIST.

In order to render this work complete and serviceable, clubs or individuals will confer an obligation upon the publishers by sending us the names and addresses of their President and Secretary, in order that they may be printed in a revised edition of the Club List also designate errors and send names of any clubs not mentioned.

Purchasers of the first edition will receive a copy of the revised Club List free. FOREST AND STREAM PUBLISHING CO., 111 FULTON ST., NEW YORK.

EXPLORATIONS IN FLORIDA.

A PRACTICABLE WATER ROUTE ACROSS FLORIDA FROM JACKSONVILLE TO THE GULF OF MEXICO.

IT is with no little satisfaction that we print the following letters. They furnish the solution of the intricate problem which we and others have for so many years been trying to solve. During the years 1873-6 the FOREST AND STREAM went to considerable expense in fitting out the "Fred Beverly" and "Al Fresco" expeditions to Lake Okeechobee, the results of whose respective explorations are fully set forth in the book entitled "Camp Life in Florida." This volume not only contains most valuable general information regarding the climate, geography, fauna and resources of Florida, but describes localities in the interior and along the coast which had previously been wholly unknown. Fred Beverly gave us an insight into the domestic life of the remnant of the Seminole Indians which still inhabit and cultivate with their negro slaves the regions bordering the Everglades, and described as far as he could the fluvial system of the interior, a map of which was printed in FOREST AND STREAM in Vol. II., No. 10 (April 16, 1874). His labors were afterward supplemented by a party of gentlemen, of whom several were from Indiana, and their discoveries and routes were fully described in the FOREST AND STREAM of Dec. 30, 1875 (Vol. V., No. 21), and illustrated by a full-page map and other diagrams. Meanwhile the indefatigable Dr. Chas. J. Kenworthy, better known as "Al Fresco," was equipped with a boat selected for the special service, and examined the watercourses, including the Caloosahatchie, which were supposed to communicate between the Gulf of Mexico and the lacustrine bodies of water in the interior of the State. What we give our readers this week is the sequel of their efforts and the proof of the correctness of their theories and endeavors. A low stage of water alone prevented them from accomplishing what fortuitous circumstances have enabled others to do. Much credit belongs to all concerned, and we do not know which most to admire, the pluck of Fred Ober ("Beverly") who waded waist-deep through mud and water into the home of the alligators and moccasins, or of Mr. Driggs who pursued his lonely way through the sawgrass and submerged marshes around the headwaters of the Caloosahatchie. Messrs. Ingram Fletcher and A. M. Conklin, of Indianapolis, have been most persistent in their researches, and the latter has done much toward explaining the system of canals and earthworks which are found along the fluvial route discovered and now located by the several explorers referred to. There can be no doubt that these gentlemen have merely traced out an old and long abandoned line of intercommunication across the State, which was once defended by earthworks by the jealous inhabitants who populated that section. This water route is now choked at all times by sawgrass, water lettuce, and other rank vegetable growth, and at some seasons is dry in places; but that it can be made practicable by reopening channels and digging canals, at no great expense, can be easily demonstrated. Whether it will ever be utilized remains for the future to disclose. The fact, as made known, is sufficiently valuable for the present. We subjoin the correspondence:—

FROM OKEECHOBEE TO THE CALOOSAHATCHIE BY WATER.

Editor Forest and Stream: As you are well aware, several of us have made three different rounds of Lake Okeechobee with the belief that a passage could be found across the sawgrass to Lake Flirt, and from thence down to the Caloosahatchie. This theory seemed the true one this spring when we found the lake (Okeechobee) but two feet higher, while the Kissimmee River indicated ten and twelve feet more water. The three previous seasons the river averaged one hundred and fifty feet in width—this season it was fully three miles wide! All this was sufficient to convince us that the water "spilled" off in the direction of the Caloosahatchie.

Barber, Dr. Hunt, Packard, Rooney, West and myself left Fort Bassinger with the river "booming," so that we skimmed across the "honnets" and marsh-grass with ease. But our stay at the Heronries was too long, and our time required us at Mellonville by the first of April.

On our return to Fort Bassinger we met Mr. James W. Driggs, of Orange Hammock, who had started in pursuit of our party, determined to go across the Caloosahatchie with us. To him belongs the honor of taking the first boat across to the Gulf by way of water communication. A few days since I received the enclosed letter from him, which you are at liberty to publish if you so desire. In conclusion I will say of Mr. Driggs that he is a thorough explorer. He has spent several years on the Kissimmee, gathering eggs and preparing bird skins. Any one wishing to communicate with him will find him at Fort Mead until October.

get scared. Take down sail and row along near shore. Night comes on and we have no camping ground, but we pushed our boat into the marsh, beat down brush, and piled it beside the boat for a fire-place, having wood aboard, cooked supper, and passed the night on the boat, resting very well considering circumstances.

Tuesday Morning.—Took breakfast very early, and by daylight were well under way, rowing again, for there was little or no wind all day. Found no obstruction in Fish-Eating Creek, and stopped for dinner at the banana plantation nearly a mile from the lake. Dinner over, we proceeded until within sight of the mound at old Fort Centre, and then turned south across the marsh back of the sawgrass and down the prairie; but here it was not the free open sailing as on the Kissimmee prairie, and although the water was two or three feet deep we encountered a great deal of switch grass, coarse prairie, but poled along without wind three miles an hour and camped on an old Indian field in one of the small hammocks which dot the prairie all the way; but most of them are flooded now. Here we had a good camp with plenty of wood. Next morning we started again, having the wind south, while our course was a few degrees west of south. No change for some time, and then we saw fine timber beyond the clumps of hammock on the prairie, and soon it loomed up in front, and also off our port bow. We were running S. S. W. now and thought this timber must be on the south side of the Caloosahatchie prairie, which proved to be the case.

We now began to notice a slight current in that direction, and before noon were sailing W. by S. down the marsh, not sawgrass, through which winds an open slough—the head of the Caloosahatchie River, distant from old Fort Centre perhaps eighteen miles. Two miles farther down, the channel enters the Indian cane and is obstructed by water lettuce; so we got outside on the prairie (south side) finding four feet of water, like a lake. After going perhaps seven miles from where we first entered the river, we struck Lake Flirt which, at low water, is a beautiful prairie, the bank of the river fringed with willow; and at Fort Thompson, now from four to six feet under water, is a splendid park-like place with river flowing rapidly between its walls of rock. Below these falls the tide flows, they say; but now the plant life oak and clumps of cabbage palmettos seem standing in a lake of water, with current barely flowing. Soon the river gets crooked, as we pass down, winding through the heavy hammock of oak and cabbage, the current increasing. We camp for the night on the first dry land we find—a pine bluff three miles below Fort Thompson.

For the next five or six miles the banks are getting higher, and we pass now and then a settler's cabin, some of them abandoned because of the flood. Current increases to three miles an hour or more until we get below Fort Simmons, which is an old field where the old road crosses the river. Fort Deyland (pronounced Deno) was an important post during the Indian War, but the building and stockade have been burned, and it is a wilderness again. Below here the country improves some, and we passed several pretty places, but none of them well improved, as the people are not rich, and but few of them are have lived here more than three or four years. Nearly all of the semi-tropical fruits do well on these hammocks. The country seems to have a limestone and shell foundation, and even the many scrubs of palmetto will produce good potatoes, peas, or orange trees, melons, and other things which are raised here to some extent for the Key West market. The people are from every section nearly, and are generally kind and polite.

Our camp the fourth night was seven or eight miles above Fort Myers, on low ground again, and in the night the tide rose so that we were obliged to take up our bed and walk to the boat to keep it dry. Next day we passed the mangrove islands, entered the broad shallow river, with deep narrow channel and low-lying flat woods on either side. For twenty-five miles from the coast the river is one or two miles wide. Fort Myers has perhaps 150 inhabitants living near enough to be neighbors, three stores which sell inferior goods at war prices, a post office, a school, Masonic lodge, poor land, and saw palmetto. There are a few bearing orange trees, and Major Evans has a few coconut trees bearing. The Major gave us an account of an exploring expedition which was fitted out for the Okeechobee country, and which returned a few days before we arrived. Capt. Henry, he, and several other residents of the river started with two small boats and succeeded in reaching Lake Hick-po-chee, which they say is two by three miles oblong and, unlike many of the Florida lakes, quite deep. They worked some distance into the sawgrass toward Okeechobee, but returned without getting a sight of the great lake. I saw several of this party. Some of them still wear cloths on their hands, and all exhibit blisters from the oars, and cuts from the sawgrass.

Leaving my companions at Fort Myers I sailed on down the river to Punta Rassa, where I caught the first mess of salt water fish, chiefly sheephead. The town, which consists of two buildings, stands on a ridge of sand backed by a mangrove swamp. One old frame building covers a good deal of ground, and is occupied by the telegraph and post office, signal service station, etc. The other is for the stock men, and both are still high on timbers to be above the high tides. A wharf and set of cow pens complete the town. For five miles south, after leaving the river, we must sail outside; and then I entered the Estero River. Through this salt lagoon and oyster bay nothing is visible but mangrove swamps, shoals, oyster bars, etc., except the pines in the background on the mainland and a fringe of pines on the gulf beach. I found one bird rookery on an island, but few plumbeous birds. I also found one galaxy of pink enlure and captured two of them, but birds are not plentiful in these parts just now. I am told that April is too early, but if I should come in summer the insects would devour me, I know, for they nearly drove me crazy the other night while I was putting up my mosquito bar.

FORT MEAD, May 12, 1878.—Persistent head winds, insects, and bad weather admonished me to hasten back, and I returned with fair wind. At Fort Myers I learned that Pierce and Platt had bought a small skiff and returned, but were obliged to hire two men to help them against the current. I came without trouble, but had head winds and a rough time on Lake Okeechobee. Was all day heating up from this side of Fish-Eating Creek to the mouth of the Kissimmee river. There is very little game and few birds or alligators on the Caloosahatchie. The coast would be a pleasant place to cruise in, with a large flat-bottomed boat to live on and small boats to hunt with, only for the mosquitoes.

JAS. W. DRIGGS.

THE RECENT YACHT MATCHES.

AMONG the many unprofessional critics who have dilated upon the paucity of entries in some of the recent regattas in the waters of the metropolis, we notice a tendency to judge of the extent and prospect of the sport of yachting by a numerical comparison of the entries of one year with those of another. This inclination is entirely wrong, and leads to very deceptive and valueless deductions. Yacht sailing and yacht racing are two quite distinct branches of the same sport, and the status of one has no connection with, nor does it indicate in any way, the prosperity or adversity of the other. The number of yachts coming to the line with racing colors attached depends so much upon secondary considerations that inferences based upon their number are misleading. The weather, expenses, temporary attractions abroad, lack of particular ob-

ESTERO, Monroe Co., Florida, April 4, 1878.

MR. INGRAM FLETCHER:

Being weather-bound here on the coast twenty miles south of Punta Rassa by a strong northwest gale, it seems a proper time to begin to write you an account of my exploring trip. * * On Monday morning, after I saw you at Mr. Dougherty's, I started from Platt's place, four miles below Fort Bassinger, taking as working passengers to Fort Myers, Messrs. Pierce, Platt and Jones. We sailed down the flooded prairie on the east side of the river (Kissimmee) until within a few miles of the lake, and then turned short across the marsh, entered the channel, and down its winding course to the greatest lake of the South, the mysterious Okeechobee; head wind, some waves, and green hands

jects or rivalry, absence on cruises, and many minor points govern the amount of spirit displayed in yacht matches. Perhaps one of the chief causes of few entries, however, is the growing conviction that time-allowance in practice is a failure, and the diversity of size and classification is annoying and aimless in too many cases. In light winds and smooth sea, when all is in favor of the smaller boat, the large one is nevertheless compelled to give time to her favored adversary; and again, in heavy winds and a sea the amount granted the smaller craft is based simply upon the theoretical difference due to size, when sailing in smooth water, whereas the greater momentum and power of the larger yacht is altogether left out of consideration and comes to the line unchallenged. Time allowance, unless among yachts very nearly matched as to size, is a dead failure. There is but one way out of the difficulty. Follow the English plan, select certain standard sizes, let owners and builders conform as far as possible to such sizes and race the yachts in classes without time allowance. Ordinarily our fleets would crystallize to the standards set up, and racing could then be followed to some purpose. To match *Tidal Wave* and *Clytie*, or *Volante* and *Petrel*, is aimless and profitless. "I will never race again unless with something about my size," is an expression too often heard, and goes far to account for the slackening interest and diminishing entries at our regattas. But racing *per se*, is not to be confounded with yachting as a sport. There has never been a season in its annals where so many small craft have been built, or where the Corinthian and cruising spirit has attained its present development. Yachting is not on the decrease, as hasty critics would infer. On the contrary, its prospects were never brighter, its popularity never greater. As a people, we are simply passing from yacht owning to yacht sailing. So much the better.

COFFEE—HOW TO MAKE IT.

IF there is anything which people think they can make, and don't make, that thing is coffee. When that peculiar old man in Arabia first found out how to make Mocha, he oracularly said (you will find it paraphrased in the Koran): "Source of joy and bitterness; consoler of man and bane of women." All that this Arab meant, was, that since ninety-nine women in a hundred did not know how to make coffee, the brewing of it would bring trouble to them in reproaches from the men. Now, Miss Juliet Corson very kindly comes forward in defence of her sex, and is willing to tell how coffee is made. We recommend most particularly the receipt which is called "Coffee With a Stick." It is perfectly possible to make the best coffee in this way, providing there is coffee, a pot, a stick and hot water. Having tasted of coffee made with a stick, we declare it to be admirable. We are sure that this summer, many of our readers, when in the woods, will make their coffee "with a stick," and will thank Miss Corson for having added to their comforts. May we, as simple commentators on coffee, say, that Turkish coffee is excellent. There is a very stupid prejudice against the grains in coffee. Just you take, reader, some day, any little copper vessel which will stand fire and will hold about a half a glass of water, and pounding your coffee as fine as you can get it, adding a lump or so of sugar, put it in your water, and bring up quickly to the boil, then let it stand a minute and drink it. Now tell me if it is not barbarous, but good! A few coffee grounds do no harm. The Turks deem the sediment an admirable tonic and thus drink it in Stamboul. As funny a chapter as we know of in "Canoeing in Kanuckea" is where the marine party blow up their coffee pot. Now, we stand up for that particular coffee pot, as that identical pot was the one we had presented to an ungrateful member of that crew. When we gave it to Mr. Alden, we remember distinctly that his face assumed a woe-begone and dazed appearance. We felt sure, because we could not impress on him which was the top or which the bottom of the machine, that some disaster would be certain to occur. The world is to be congratulated, then when the innocent coffee pot was placed on a funeral pyre, big enough to cremate a Sutee, that Messrs. Alden, Holberton and Norton were not sent to Kingdom Come, and this world deprived of the services of three most clever journalists. With Miss Corson's method of making coffee fully understood, we trust that the canoeist of the future will run no such terrible risks:

The best coffee is a hot, clear, fragrant infusion, aromatic and exhilarating. It can be made in any rather deep vessel; either a coffee pot, a tin pail, an earthen pitcher or an iron pot will answer the purpose, always providing the utensil is clean. Intense heat is required to develop all the valuable properties of the berry, but actual boiling dissipates its delicate volatile oil, and extracts its tannic acid; the action of this acid upon the cream or milk generally used with coffee is to harden their albumen into an indigestible compound, which irritates the sensitive membranes of the digestive organs. The strength of coffee must be decided by the taste. One ounce, or two heaping tablespoonfuls of ground coffee will make a quart of pleasant, well-flavored beverage, suitable for breakfast. *Cafe noir*, or black coffee, used after dinner, requires a cupful of coffee to every quart of water. *Gloria*, or burnt coffee, needs a like proportion of coffee and water. French coffee, as served on the Continent, requires six ounces of coffee to each quart of water, and the addition of three-quarters of an ounce of chicory. Below we give receipts for all these beverages.

Coffee With a Stick.—Have ready the quantity of water actually boiling; if you use a pitcher heat the coffee in a frying pan, stirring it over the fire one minute. If you use a pot or pail, heat the coffee the same length of time in that. For one quart of water use two heaping tablespoonfuls of ground coffee. When the coffee is hot pour the boiling water upon it and stir it with a stick or spoon for one minute; let it stand

by the side of the fire, where it will keep hot, but not boil, for one minute; then stir it again for one minute; keep it by the fire for two minutes to let it settle, and then pour it into the cups carefully enough to leave the grounds at the bottom of the vessel. The object of stirring is to thoroughly saturate the coffee with the boiling waters, so that the grounds will sink to the bottom with their own weight.

Cafe Noir.—Proceed as above, allowing one cupful of coffee to each quart of boiling water; if you use a coffee pot with a percolator, or strainer, put the coffee into that and pour the boiling water through it gradually; let it stand near the fire while you are pouring in the water; do not stir or shake the coffee pot, and serve the coffee as soon as you have added all the water.

Gloria.—Make the same as *cafe noir*; sweeten it almost to a syrup, pour a little brandy into each cup over the bowl of a spoon, set it on fire; and when it is half consumed, blow out the flame and drink the coffee.

Soyer's French Coffee.—Stir together over the fire six ounces of coffee and three-quarters of an ounce of chicory, until hot; pour over it one quart of boiling water, set it by the side of the fire for ten minutes, and then serve it with milk and sugar; it can be made in a percolator, or in a pail or pitcher, stirring as in the first receipt.

CAMP LIFE MENUS.—We are in receipt of numerous letters from correspondents who, not being bachelors, confess their masculine ignorance of the culinary art, and crave enlightenment as to the mysteries of the kitchen. Appreciating their plaint we shall, from time to time, endeavor to give to our friends, suddenly cast upon their own resources in the woods, such hints and receipts as shall absolve them from all dependence upon a feminine monopoly of these accomplishments. We shall studiously confine ourselves, however, only to such menus as are adapted to the woods alone. The bare intimation of the average man ever becoming independent of a helpmeet in his domestic life suggests a radical revolution in society which would be as deplorable in its character as fatal in its effects. We append a part of one of several letters which we have received:

"The sluggish stream furnished no better fish than the ordinary sun, the sprightly shiner, the ever snapping perch and the slimy, despicable bull pout. The kettle was half filled with water, and the parsnips, onions and potatoes cut into slices and set boiling merrily for twenty minutes with a large piece of pork. Next the fish were cut into pieces and all kinds cast in without exception. Last, when the fish was done, a quart of milk and a lump of butter were added, and as soon as the mess showed signs of boiling it was served with hot toast. Nobody knew what dish was originally intended, or would result, but on tasting, we all, with one voice, called it oyster chowder, and a very good one it seemed to be. Nobody ate anything else. The success of the experiment was doubtless due to the parsnips and made a very pleasant variety in the course of our camping out cookery. We record it as a hint to other wanderers, and with the hope that you will publish all Miss Corson's new dishes, venturing only to suggest to her that what we crave is ingenious variety of the fewest and simplest materials, such as are alone procurable in the woods. H. D. J.

FISH CHOWDER.—The following receipt for making chowder is from C. F. Hotchkiss' new book entitled "On the Ebb," printed by Tuttle, Morehouse & Taylor, New Haven, Conn. The best fishes for chowder are cod, blackfish and sea bass:

Put the kettle on a slow fire, of a capacity sufficient for your needs; put in a layer of clear sliced salt pork; Put in a layer of clear cuts of fish, free from bone as possible; Put in a layer of clear sliced potatoes; Water to cover only; Repeat the three layers twice, after which one pound of butter, with pepper and salt to suit; Pour in one pint of brandy, one pint catsup, one pint port wine, the juice of six fresh lemons; Then, for the purpose of knowing when done, put three good sized potatoes on top; No pilot bread or crackers in the kettle, but they should be toasted, stewed in butter and served separate. No meat or flour; don't burn, or forget the lemons. Serve the chowder from the kettle, unless you have extra large platters. Fish cuts should be tied in muslin.

Send Hotchkiss a dollar for his little book, and you will be interested. It contains much information regarding salt water fishing in Long Island Sound, which fishermen will find useful.

FOR THE COLD COUNTRY.—On Wednesday last the Eothen, Capt. Thomas F. Barry, left New York for her long cruise amid the ice. The departure of this vessel has a certain scientific importance, since she carries out Lieut. Schwatka, U. S. A., Lieut. Gilder, Henry Klutschak, Frank Meleus and "Esquimaux Joe" Eberling. The mission of these volunteers is to find the remains of Sir John Franklin. The Eothen is a staunch whaling schooner of some 120 tons. Her intention is to land her party of explorers at Whale's Point in Hudson's Bay. Here, if possible, dogs and sleds will be bought of the natives, and then some more distant point on an island in the Gulf of Bothnia will be sought for, where it is reported the remains of the brave English Arctic explorer are to be found. The schooner expects to be absent some thirty months, and a meeting place has been agreed upon in Repulse Bay in the spring of 1880. The exploring party hope to find musk ox in abundance. The party is well supplied with Winchester, Sharps, Whitney, Remington and Springfield rifles. During the long absence the Eothen will cruise for whales. The outfit of the party is due to the liberality of Chief Justice Daly and to Carson Brevoort, Esq. Of course ample stores of food have been carried out. At the suggestion of a correspondent of this journal we called on Captain Barry with the request that attention should be paid to the ornithology of the countries he visits. It is quite a question as to the heron, which are said to breed in the neighborhood of King William's Land. The Captain has assured us that he will do his best in procuring information on this and kindred topics in natural history, all of which we trust to present to our readers at some future day.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

Tennessee State Sportsmen's Association, Nashville, Dec. 2
Soc'y., Clark Fritchett, Nashville, Tenn.
Wisconsin State Sportsmen's Association.
Massachusetts State Sportsmen's Association, at call of President
Missouri State Sportsmen's Association.

MESSINA QUAIL.—The Messina quail received by the Salisbury, Conn., Club, and liberated by them as detailed in our columns last week, were part of a shipment of which other distributions were: 200 to the Rod and Gun Club, of Springfield, Mass.; 400 to Northampton, Mass.; 200 to Rutland, Vt. We have already announced the return this spring of some of the original birds liberated at Rutland last year. The number of birds now in the country is so large that the question of successful importation cannot long remain unsettled.

—A correspondent in Warren, Pa., writes under date of June 21:

The "Warren Club for the Protection of Game and Fish" have just received from Mr. D. Bonano, of Messina, a consignment of 192 quail (200 ordered), all being in excellent condition and strong flyers.

—A New Jersey correspondent also writes:

DEAR SIR: On Saturday I received from Messina, Sicily, two hundred African quail, or, as they are generally called, "migratory quail." I put them out in Morris County, New Jersey. They were all strong birds; none of them alighted on their escape from the box within five hundred feet, except one whose wing feathers were broken. They were sent out by Mr. Bonano, of Messina, through the kindness of Mr. Evans, our Consul in Sicily, to whom the American Acclimatization Society desire to return their thanks for his great politeness and attention to their order. If we can succeed in acclimating these birds, we shall have done a good thing for the sportsman, the farmer and the table, as they are a first class game bird, feed largely on insects that are injurious to vegetation, and are very delicious as food. They are said to be better than woodcock. Their flesh is unlike our quail, in being dark instead of white. They are about half the size of our birds. The "Duke," with whom I conversed while shipping the birds at Hoboken, informed me that he had frequently hunted them near Naples, that they arrived in that vicinity about May, and left in September; were found in high stubble; were delicious eating. JOHN W. GREENE, M. D.

CECIL COUNTY SPORTSMEN'S ASSOCIATION.—The officers of this club, whose headquarters are at Elkton, Md., are: Wm. R. Gilpin, Pres.; W. K. Rockafus, Sec.; R. G. Reese, Treas.; Dr. R. F. Tull, Cor. Sec. The club has been very efficient in securing the enactment and enforcement of game protection measures.

OCCASIONAL.

The Rifle.

FOREST AND STREAM AND ROD AND GUN TEAM MATCH.

On Monday evening, June 24, the Third Association Match of the Sharpshooters' Union of the United States of America was brought to a close. From early morning of June 16 to midnight on June 24 the festivities had never ceased. Each day many thousands of persons visited Union Hill; all day, save on Sundays, the crack of the rifle was heard.

The Americans would not know how to carry out such a vast enterprise with the same success. It is our German friends who have taught us the lesson. We take our pleasure sadly and demurely; we make a labor of it. Now your Teuton, without ever once outstepping the bounds of propriety, goes in for good, honest fun. He enjoys a hearty laugh, and he takes it whenever the opportunity presents itself. Think of it! There must have been as many as 200,000 people who visited Union Hill during the week, and throughout all that time there was never a fight—not even a quarrel. The Schuetzenfest was a festival in every sense of the word, modeled after the fairs held in the Fatherland. There were all kinds of amusements all day long; there were aerobats, rope-walkers, prestidigitateurs, who carried on performances in the open air, and these were paid by the association. Fine bands of music were stationed at intervals through the grounds, who made the air joyous with their harmonies. There were no end of side-shows, which could be visited for a trifle, and there were greased poles to be climbed. On certain days the Turners went through their feats, and the leading singing societies gave vocal entertainments. Long, covered sheds, handsomely decorated, were given over to dancing, where string bands presided. Of course there was beer, good honest lager, in profusion, and mountains of empty casks at the close of each day showed the quantity consumed. One great feature of the Schuetzen Park was the Prize House. This was a real treasury. Through the windows could be seen some \$50,000 worth of prizes. There were silver goblets, silver tea-sets, wine-coolers, sewing machines, billiard tables, gold watches, gold and silver medals, and no end of gold eagles. Standing watch and guard over this wealth were the cadets, a corps of young gentlemen who, with gun and bayonet, patrolled the neighborhood of the Prize House. In the long, covered house, which was the rifle-gallery, method and system was the rule. How to accommodate the thousands who shot, how to keep all the scores correctly, and how to make them immediately public, is a secret which our German friends possess, which is beyond the power of our clerical force at Creedmoor. The shooting house having been enlarged for this special occasion, every match was shot on time, and there was no delay. At the Castle a spacious room was given up to the press, and every attention possible was shown to representatives of the newspa-

pers. Contiguous to the press room was the office of the Secretary, and particular thanks are due to Mr. B. H. Tienken, the Recording Secretary, and to Mr. J. H. Behrens, the Corresponding Secretary, for facilities in obtaining scores.

In considering the immensity of this meeting, the great administrative power necessary, and the good judgment and sound common sense which was displayed in carrying out this Association Match, it would be invidious on our part to mention any single name as having alone been conducive to the great results obtained. Captain George Aery, the President of the Association, never for a moment was off duty during the whole week. With a fund of good temper, combined with untold capabilities for hard work, very much is due to him. Mr. Jose, Captain Aery's first lieutenant, with Mr. Anton Meyer, the adjutant, were indefatigable in their labors. On the shooting committee Messrs. H. Raschen, Ph. Klein, J. H. Mueller, J. N. Crusius, and G. A. Kundahl, managed the innumerable details of the matches with the best of judgment. Of course, when so many riflemen are in the field, differences of opinion must exist; but in almost every case, when any disputes arose, the good judgment of the riflemen themselves settled the point, and appeals to higher authority were very rare.

We have given in our last week's issue, and in our paper of to-day, the winners in the various matches. We now come to what was to us one of the leading events of the Schuetzenfest—the team match for the Forest and Stream and Rod and Gun Medal. Our first medal was given early this year, for a team match at Conlin's gallery, and on Monday we had the honor of presenting through Judge Gildersleeve a third medal, to be shot for by teams.

We can safely say that this event caused as much speculation and excitement as any match yet shot in the vicinity of New York, the International matches only excepted. It was known that the crack shots, who had distinguished themselves during the last week at the various targets, were affiliated with various societies. The King, Mr. W. H. Farrow, was a member of one club, and his distinguished rival, Mr. W. Hayes, was the mainstay of another. Then, too, there was the Helvetia Club, celebrated for its skill, with other clubs from New York and Philadelphia, who had entered into the lists with fine records.

It is with a great deal of pride that we record the fact that the winning team, the Zettler, carried off the prize with a superb score, one in fact which it is believed has never been equaled. An average of 199.50, almost 200, for eight men, means that at 200 yards the eighty balls all struck on an average not over eight inches from the dead center of the target. In examining Mr. P. Fenning's score of 223, which has rarely been beaten—that means, too, that in shooting ten shots this rifleman struck the bulls-eye every time at a distance of only three inches from the dead center of the bulls-eye; M. Farrow's score, 211, is also a very fine one. In the Zettler's score one-half of the team made 200 and over. Mr. Hayes, of the Newark Club, as fine and reliable a shot as can be found in the country, made 218. As had been surmised, the contest for the first prize was between the Zettlers and the Helvetias. Between the Zettlers and their rivals there was the large difference of 150 points.

At 3 o'clock the fifteen clubs who had participated in the match, having fired their last shot, formed in a body and proceeded to the Prize House, where his honor Judge Gildersleeve, on behalf of T. C. Banks, Esq., of the Forest and Stream and Rod and Gun, in presenting the following abstract. Judge Gildersleeve said: He had not anticipated being present on this important and agreeable occasion; not for lack of interest, but on account of his judicial duties. He addressed the riflemen present with a certain amount of painful emotion. If it had not been for the sad and unexpected death of a gentleman, an officer and a rifleman, the prince of good fellows and the prince of riflemen, Major General Dakin, it would have been General Dakin who would have stood there and addressed them. Judge Gildersleeve delivered an eloquent eulogium on General Dakin, who had been appointed one of the prize committee, and warmly endorsed a plan, now being proposed, of having a trophy to be called the Dakin Trophy, to be shot for at Creedmoor, the trophy to be obtained by contributions among the riflemen of all nationalities in New York. The benefits of rifle-shooting were mentioned by the Judge. "It was a pastime which was healthful and invigorating, intended to strengthen the brain, the hand and the intellect. It tended to develop a proper military spirit within the length and breadth of the land, and gave the necessary preparation when at any time the nation was required to defend itself." In presenting the badge to the Captain of the Zettlers, Judge Gildersleeve congratulated Captain Zettler on the fact of its having been the third medal won by them, all the gifts of the FOREST AND STREAM AND ROD AND GUN. The conclusion of the speech was particularly happy, when the Judge declared that the losing teams now perfectly understood "what little things they had omitted doing, which, had they done, would have made them come in first." Appropriate replies were made by the captains of the various teams, and the performances concluded with cheers for the Zettlers, for Judge Gildersleeve, and the FOREST AND STREAM AND ROD AND GUN.

The conditions were: Match to take place at the Schuetzen Park, Union Hill, on Monday, June 24, 1878, each team to consist of eight men. Entrance fee, \$15 per team. The team making the highest score to win the Forest and Stream and Rod and Gun Medal. The entrance fee money, after deducting cost of markers, will be divided among the teams, pro rata. All the members of such teams must belong to the same society, and must have been members of it for ninety days previous. Any rifle club or shooting society of the United States will have the privilege of sending their teams without being members of the Union.

Landolt, N. Y., 46; 178th, M. Grau, Chicago, 46.

The Point Target.—The following is the score of those gentlemen who competed to make the most points in 600 shots: Wm. Farrow, N. Y., 1,040 points; Wm. Hayes, Newark, 1,046; Wm. Hahn, Williamsburgh, 956; W. H. L. Koenig, San Francisco, 831; H. Gohl, N. Y., 829; D. Wiggert, St. Louis, 820; O. Q. Zettler, N. Y., 819; G. Quittmeyer, Bridgeport, 787; P. Feunung, N. Y., 764; F. Landolt, Hoboken, 714; W. Chrenyfort, San Francisco, 687; T. F. Norris, Baltimore, 671; J. P. Delihenty, Pittston, 652; Ed. Rnegger, Wisconsin, 599; W. Keller, Chicago, 422; Aug. Gellusa, Newark, 385; E. Graf, Minnesota, 356; Peter Bertschy, Chicago, 289.

Sunday, June 23.—Sunday was grand gala day, devoted to the coronation of the King. This honor fell to Mr. William Farrow, who made 1,049 out of a possible 1,800. Mr. Wm. Hayes, of Newark, had made the same score in 600 shots, but, having been crowned last year, gracefully gave up the place to Mr. Farrow. Mr. Farrow is a Maine man, and is well known for his skill with the Ballard rifle, and is a member of the Zettler Club. The ceremony of making the King was charmingly managed, little Miss Anna Ermisch making an appropriate speech. Around the neck of the King was placed the scarf of honor. It is quite probable that Mr. Farrow will go abroad and contest for the palm of victory in the great German rifle contests. For descriptions of the team for the FOREST AND STREAM AND ROD AND GUN Medal see other column.

THE KING OF THE SCHUTZENFEST.—Mr. William Farrow, the King of the Schutzenfest, leaves on Saturday next for England and the continent. Sir Henry Halford has entered Mr. Farrow for various matches at Wimbledon, and, being a member of the Bund here, he will have the privilege of shooting at all the matches at the great Schutzen Bund, to be held at Dusseldorf on the 20th of July. We should not be surprised if Mr. Farrow would be king both in Germany and America. Our American king takes with him in lieu of sceptres some half dozen republican Ballards. Mr. Farrow says that 1,049, made by him for his king score, has never yet been beaten. No better representative American rifleman could be sent abroad than Mr. Farrow, for to his great skill he unites a singularly modest and unassuming manner. The king goes

abroad with the best wishes of all his American and German subjects.

Boston, June 20.—There was a large concourse of people to witness the "Shot-Gun Match" at 800, 900 and 1,000 yards. Mr. Jackson was the winner. His score has been a very strong one, and he has secured the much coveted gun. The record of 213, 212, 218 in three consecutive trials, makes an average of 214.65. The following is the score:

W. H. Jackson.	
800.....	5 5 5 4 5 5 4 5 5 5 5 4-72
900.....	5 5 5 4 5 5 5 4 5 5 5 5-69

Law.....4 4 3 5 4 4 4 6 4-42

In match No. 3 four gentlemen completed their scores; seven shots at 300 yards:

O. M. Jewell.....4 5 4 4 5 5 4-41 H. Rogers.....4 5 5 4 4 5 3-30

J. C. Meador.....4 4 4 5 4 4 5-30 E. W. Law.....5 5 4 5 4 4 3-30

CREEDMOOR.—On two days of last week the Twenty-third and Sixty-ninth Regiments shot in order to qualify for marksmen's badges. Of the 100 of the Sixty-ninth, only 27 qualified. Of the Twenty-third, in 302 officers and men, for the third-class shooting, 100 and 150 yards, 220 men qualified, and for the second class, 300 and 400 yards, 48 men.

Saturday, June 22.—Second competition for the Soldier's Match, open to teams of eight (privates or corporals) from each company in the National Guard, each having the right to send as many teams as it sees fit. Distance, 200 yards; position, standing; weapon, rifle or carbine. State model; third-class target. Competitors to be in uniform. The match to consist of two stages. First, firing by file, five rounds per man; time not to exceed two minutes from the command, "Commence firing." Second, firing by volleys, five volleys for each team. The firing in both stages to be conducted according to the tactics. Eight entries were made by four teams. The highest score of each was as follows:	
Co. H, Seventh Regiment.....	Fila. 53
Co. I, Seventh Regiment.....	Volley. 59
Co. G, Seventy-first regiment.....	Total. 117
Co. G, Seventh Regiment.....	53
Co. G, Seventh Regiment.....	76
Co. G, Seventh Regiment.....	119

Champion marksman's badges; distances 200 and 500 yards:

MEDAL OF THE STOCK EXCHANGE CLUB.—It is natural that Broad street should do things in the most superb way. Accordingly, Mr. C. J. Osborne has offered a magnificent medal to be shot for by N. Y. S. E. R. O. It is a Creedmoor square target of gold, surrounded with a wreath of laurel. There is a rising sun in gold, and the inscription above is Osborn Medal, and below, Creedmoor. The Messrs. Tiffany designed and executed the medal. The intention of the donor is that it be awarded to the best shot at 300 and 500 yards distance, in three competitions, at Creedmoor.

MORRISANIA SCHUTZEN VEREIN.—This club, of which John Eichler, Esq., is President, and Mr. Charles Geib, Secretary, is of quite recent formation, having only been organized during the last three months. Not having joined the regular organization, they had, however, presented a handsome prize to be shot for at Union Hill. Captain Aery gave them permission to shoot at the target of honor, which courtesy they declined. In a very pleasant speech the President of the shooters' association congratulated them on their fine appearance, and expressed the belief that the Morrisania Schutzen Corps would soon take rank among the leading rifle clubs in the United States. Mr. A. G. Genez, the well-known manufacturer of arms in Chambers street, is the shooting master, and showed his skill by winning a handsome prize, as did Mr. Julius Brenner.

THE ZETTLER CLUB.—This club was organized in 1874. It has gained the pre-eminent position of being the strongest German rifle club in the United States. Such skill as they have attained is due to hard and persistent work. At Zettler's gallery shooting is going on almost all the time. The club is quite prepared to turn out a team of 25 men. At 200 yds we are pretty certain, with slight practice they could hold their own with any team at Creedmoor. Gallery practice with the Zettler club is a *sine qua non*. It is there that they have acquired their skill. There can be nothing like chance in a team which within six months won the first

prizes when opposed to the best American and German teams in the gallery (we refer to the Conlin match) and at the Schutzen Park.

MOHAWK VALLEY RANGE.—In a report made by us of the military team match some errors were made. The Utica Veteran Zouaves used the N. Y. State Remington rifle, open sights. We append the corrected scores:

Adj. Bason Caisles.	
Meyers.....	0 2 0 2 2 4 4-12

NORRISTOWN RIFLE OLD.—The club spent June 19th at Valley Forge, and was present at the exercises and military reviews. Before going to Valley Forge two of the members shot a match "to fill in" the day's work. They have a hard range to shoot over, being across the Schuylkill River, 200 yards range; 3 scores of 5 shots each at 300 yds., standing; N. R. A. rules to govern:

A. B. Parker.....5 2 4 4 4 4 4 5 4 4 3-53

M. M. Thomas.....3 3 4 4 4 4 4 3 3 4 0 1 4 8 2-48

Out of a possible 75 in a bad 4 o'clock wind.

Game Bag and Gun.

GAME IN SEASON FOR JULY.

July is a close month for game, except as to woodcock, in certain States.

NEW YORK LAW.—The open season for woodcock in New York State begins August 1; for quail, Nov. 1; and for ruffed grouse or partridge, Sept. 1.

GAME IN MARKET.—RETAIL PRICES, POULTRY AND GAME.—Game—Wilson Snipe, \$3 to \$4 per dozen; wild pigeons, 15c; 15c; stall fed do, \$1.75; Philadelphia squab, \$2.50; wild do, \$1.25.

Poultry.—Philadelphia and Bucks County dry picked chickens, 20 cents per pound; do fowls, 16 cents; do turkeys, 16 cents; do ducks, spring, 20 to 25; do geese, Boston green, 15; Stato and Western chickens, 15; do turkeys, 15 cents; do fowls, 15; spring chickens 20 to 30 cents.

MAINE.—Machias, June 20.—Prospect of deer being more plenty this season. Grouse are having a good chance this spring to hatch. If black duck shooting was not allowed after the 1st of January, we should have plenty of good duck shooting in the fall. I saw in one small pond eight the other day, all males.

ADIRONDACKS.—A Brooklyn correspondent writes: "Paul Smith, of hotel fame, writes me from the Adirondacks that he has made his house double the size of two years ago. Terms for board, three dollars per day. (A No. 1 fare, as we can attest.) Stabling for horses, five dollars per week. Says 'he sees deer every day feeding on the marsh opposite house. Largest trout taken in the St. Regis, so far, fifteen pounds; largest one taken in the Upper Saranac, twenty-six pounds. Guides are now \$2.50 per day."

MARYLAND.—Elkton, June 19.—Woodcock are abundant. OCCASIONAL.

TENNESSEE.—Nashville, June 23.—In addition to the fishing there are many parts of this State where there is still an abundant supply of large game. In the winter time water fowl are found in abundance in all of the many streams in the State; and for the canoeist there is not more picturesque scenery anywhere to be found than along the Upper Cumberland and Tennessee Rivers. While on the Flint, the Elk and Duck Rivers, which are not navigated by steamers, game and fish in such quantities are to be found as to offer a never ending series of sport. The people are everywhere glad to meet strangers, and as the country, though thickly settled, is dotted with vast areas of forests in almost their virgin state, the tourists have the advantage of both the comforts of civilization and the excitement of frontier life (less the Red Skin) agreeable blended.

MICHIGAN.—Grand Rapids, June 15.—Deer are very numerous, more so than I have seen in years. Two fawns were caught near our lumber camp last week, and also two young bear cubs.

STORM LAKE.—Waterloo, Ia., June 18.—In your issue of June 13 you say to H. H. T. Leland, Ill., "You will find quail and pinnated grouse about Storm Lake, Iowa." Quail are extremely scarce in that vicinity. Pinnated grouse are quite plenty. I had good shooting there last season. Ducks and geese are very plenty in the lake during the migratory seasons. It is getting to be well settled about Storm Lake, and of course game is not so plenty as it has been. I think that the best place for hunting and fishing in this State, if not in the United States, is around Spirit and Okoboji Lakes, The M. and St. P. R. R. now reaches within fifteen or twenty miles of these lakes.

NEVADA.—Columbus, June 9.—As for this place, it is part of the great desert lying between the Rockies and the Sierra Nevada. There is not a drop of water (except what is dug for), a blade of grass or a tree within 20 miles. Walker's River, 100 miles north, and Owens River nearly as far South, are the nearest rivers. Both are swallowed up by the thirsty desert, like all the rivers flowing east from the Sierras and west from the Rockies. Columbus is a mining camp on the edge of a valley 10 miles in circumference, said by scientists to be the crater of an extinct volcano. It is covered with immense deposits of borate of lime and soda, so that it looks precisely like a frozen lake with snow on the ice. The object of the works I spoke of is to extract the borate acid from these compounds and use it to manufacture borax. I doubt its feasibility. Twenty miles west are the White Mountains,

je20 4t Boston.

Painting.

PAINTING.

EVERY ONE THEIR OWN PAINTER.

50 Per Cent. Saved.

We are manufacturing a very fine Pure Ready-mixed Paint, mixed in such a manner, that any ordinary stable or farm hand can make as good a job painting as a painter can with paint mixed in the old way. This is because our paint does not set quick, and thus show marks of the brush. We sell it lower than materials can be bought in the ordinary way, and pay no rent on certain sized orders.

Any one wishing to Paint, will have mailed free, upon application, our book—"How Every One can Paint and Select Harmonious Colors." Address INGERSOLL PAINT WORKS, South and Dover streets, New York.

Laflin & Rand Powder Co.

No. 26 MURRAY ST., N. Y.

Sole Proprietors and Manufacturers of
Orange Lightning Powder.

No. 1 to 7, strongest and Cleanest made, in sealed 1 lb. canisters. Higher numbers specially recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6 1/2 lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and PFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs. and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less residue than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

ELASTIC POWDER and ELECTRICAL BLASTING APPARATUS. MI ITARY POWDER

of all kinds on hand and made to order.

Safety Fuse, Frictional and

Platinum Fuses.

pamphlets, showing sizes of the grain by wood cut, sent free on application to the above address.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it can not get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle .32, .38, or .44 as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 22 and 28, extra long, and No. 44, model 1873. Send for Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,

NEW HAVEN, CONN.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

At the international pigeon shooting, Monaco, Feb. 1878, the Grand Prix de Cielino, an object d'art valued at £160, and a money prize of £100, for the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Chalmers E. Greener, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 25 yards and 1 foot and 2 1/2 yards. He also won the second event, killing 8 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, was a 17-gauge by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. J. Purdy, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 86 birds out of 100, using one barrel only.

The winning gun also at the great London Gun Trial, 1876, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 6, 1875; No. 163,323. BEWARE OF IMITATIONS OR IMITATIONS.

W. W. GREENER, St. Mary's Works, Birmingham, England.

H. C. SQUIRES, Agent, No. 1 Cortlandt Street, New York City.

IMPORTANT TO FARMERS, COW-KEEPERS AND DAIRYMEN.
The Wonderful Self-Acting Cow-Milker,
PATENTED MAY 28, 1878.

THE MOST USEFUL INVENTION OF THE AGE.

Tested and approved by many of the leading Agriculturists, Dairymen and Farmers throughout the United States, and highly recommended by all who have used it.

WILL MILK A COW IN FROM THREE TO FOUR MINUTES and can be adjusted and used by a CHILD. Usefulness, simplicity, cleanliness, durability and cheapness combined. PRICE, TWO DOLLARS.

Apparatus, with full instructions and pamphlet containing description of the milker and sectional views and treatise of the cow's teats and bag, sent prepaid to any address on receipt of price, \$2.

READ THE FOLLOWING TESTIMONIAL: 21 LEXINGTON AVENUE, N. Y., June 5, 1878.

I hereby certify that, in company with the Superintendent of the American Society for the Prevention of Cruelty to Animals, and other officers of that society, I have witnessed the operation of the Self-Acting Cow-Milker, and that it fulfills all that is claimed for it.

(Signed) JOSEPH B. COLEMAN, Veterinary Surgeon.

Member Royal College of Veterinary Surgeons of England and Veterinary Surgeon to the American Society for the Prevention of Cruelty to Animals.

STENT & CO., Manufacturers' Agents, P. O. Box 2,997, 162 Nassau Street, New York.

Hart's Sportsman's Favorite Metallic Shells.
FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing misfires. The Cone is made of nickel, and fastened solid in its place. Neither rusts nor corrodes fast like movable anvil made from steel. The Nickel Cone also prevents misfires when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These Shells are finely finished, and made any length ordered, from 2 1/2 to 3 1/2 inches. Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses throughout the country.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA. Messrs. GEORGE E. HART & Co.—Gentlemen: The fifty Shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly, A. H. BOGARDUS.

Compressed Buck Shot.

FIRST PREMIUM, CENTENNIAL EXHIBITION—REPORT—"Exact uniformity of size, truly spherical form, high degree of finish and general excellence."

Gunpowder.

THE HAZARD POWDER CO.
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. and 1 FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

TROUT FISHING!

The Wisconsin Central Railroad

THROUGH TO

LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland
and return for \$20 are sold at 63 Clark street, or the
C. & M. and St. Paul, Madison Street Depot, Chicago;
also at low rates from Milwaukee. Dogs, guns and
camp baggage taken free.

The points of attraction to sportsmen on this
"Forest and Stream" route are Menasha and Green
Bay for bass fishing; Butter Creek and Lake for
muscalonge; the many branches and lakes of the
Plumbeau and Chippewa which teem with bass, pike
and pickerel, never till last season fished by sports-
men. Between Silver Creek and Ashland all are
trout streams, and many others can be easily reached
along the shore from Ashland or Rayfield, while
rock fishing for speckled trout and brookling in the
Bay affords excellent sport.

The Chequamegon hotel at Ashland, built last
year, has been enlarged, and is supplied with a
steam-yacht, sail and rowboats and excellent guides.
The atmosphere at Ashland is a sore preventive of
hay fever.

Steamers from Ashland to all Lake Ports.
Send for Guide Book.

Sportsmen's Routes.

"THE FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
of Northern Michigan,
VIA THE

Grand Rapids & Indiana RR

(Mackinaw, Grand Rapids & Cincinnati Short Line.)
Sportsmen who have cast a fly, or trolled a spoon
in the

Grand Traverse Region

will come again without solicitation. All other lovers
of the Rod are invited to try these waters, wherein
the fish named above, as also Muscalonge, Pike and
Pickerel abound.

In no other streams east of the Rocky Mountains
is the famous AMERICAN GRAYLING found in
such numbers.

BROOK TROUT Season opens May 1.
GRAYLING Season opens June 1.

The Sportsman can readily send trophies of his
skill to his friends or "Club" at home, as ice for
packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery
of the North Woods and Lakes is very beautiful.
The air is pure, dry and bracing. The climate is
peculiarly beneficial to those suffering with

Hay Fever and Asthma.

The Hotel accommodations are good, far surpass-
ing the average in countries new enough to afford
the finest of fishing.

On and after June 1 Round Trip Excursion Tickets
sold to Points in Grand Traverse Region, and attrac-
tive travel facilities offered to tourists and sportsmen;
also Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns and Fishing Tackle Carried Free, at
owner's risk.

Camp Cars for fishing parties and families at low
rates.

It is our aim to make sportsmen feel "at home"
on this route. For Tourist's Guide, containing full
information as to Hotels, Boats, Guides, etc., and
accurate maps of the fishing grounds, send to

Hotels and Resorts for Sportsmen.

Invalids' and Tourists' Hotel,
BUFFALO, N. Y.

A new and elegant summer resort; overlooks Lake
Erie and Niagara River, and is in the midst of beau-
tiful parks. The Canada shore and the spray from
Niagara Falls may be distinctly seen from its tower.
Trains run to the Falls every hour. Climate deli-
ciously cool, equable, and invigorating. The cool lake
breezes so temper the atmosphere that no summer
day is too warm for comfort, while the temperature
at night is appreciated by all who have sojourned
here during the warm months.

What man with a family, having once been crowded
into some small "sky parlor" in that hottest of all
times places—Savannah—has been continually
jostled and elbowed by the metropolitan throng that rolls
alternately in dust and surf at Long Branch, but that
has vowed never again to repeat to summer resorts!
And yet with each returning season, comes the query,
where shall we go? No place on this continent
possesses more advantages for the tourist, pleasure
seeker, or those in search of rest and relaxation from
the cares of business, than this hotel. Its accessi-
bility, its cool, bracing and salubrious climate,
the thermometer ranging in summer from 65 to 75
degrees Fahrenheit. Its attractions of the hotel
and its environs. All these combine to render it the
most desirable resort for those in search of relaxa-
tion and rest. The architectural features and interior
finish of the house are such, by good judges, to be the
finest of any hotel in the world. Its furnishings are
unique and superbly rich. Table unsurpassed. Ele-
vator, hot and cold, Turkish, Russian, electric, needle,
and other baths; billiard room, bowling alley, speak-
ing pipes communicating from every room with the
office, telegraph and R. R. ticket office, and all mod-
ern conveniences are provided. Advantages for fish-
ing and boating are unsurpassed. Terms, \$3.00,
\$4.50 and \$6.00 per day, according to location of
room. Address,

MANAGER INVALIDS' AND TOURISTS' HOTEL,

Bogardus' Patent Rough Glass Balls and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit. CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the potter, is now ready for the market. Price \$8. Old style, \$6.
Parties buying glass balls will receive, in each barrel containing 300 balls, score book and rules for glass ball shooting, containing 40 pages.

HEADQUARTERS FOR BALLS, HARGREY BROS. & CO., 10 Platt Street, N. Y. City.
FOR TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," by A. B. BOGARDUS, containing instructions for Glass Ball Shooting, and chapter on breeding and breaking of dogs, by Miles Johnson. Price \$2, by mail, postage paid. Address, Capt. A. B. BOGARDUS, Elkhardt, Logan Co., Ill.

IRA A. PAINE'S FEATHER FILLED GLASS BALL. PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls. No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.
Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.
Send for price list. Special inducements to the trade.

THE STRONG BLACK BASS ROD--IN TWO PIECES.

The undersigned is making a rod for Black Bass fishing, to which the attention of anglers is called. It is made from drawings and suggestions furnished by the well-known expert, Dr. J. A. Henshall, of Ky., who says of it: "It is the finest rod made, and just 'the thing' for the best black bass angler." The two-joint principle, applied to rods of this style and class, Dr. Henshall considers by far the best. The butt of the STRONG ROD is of the choicest second-growth ash, and the top joint of Cuba selected lancewood. The rod is finished with solid German silver mountings; reel bands above the hand, and standing guides throughout. Length, 8 ft., to 8 ft. 6 in.; weight, 3 ozs. to 9 ozs. The finish of the STRONG ROD is equal to any rod made. It is warranted in every respect. Price complete, as above, \$10; price with extra top joint, \$13. Address F. A. STRONG, Honesdale, Pa.

Rods of all kinds made to order. Send for price list. je21 1t

THE TALE OF THE TERRIBLE FIRE

I WILL tell you the tale of the terrible fire:
It springs from the earth—it is dreadful and dire.

In the dark
Wintry sky,
See the spark
Upward fly;
See it grow
In its frame—
See it glow
Into flame!

See it burning and blazing;
See it spring into life
With a vigor amazing—
How it longs for the strife!
Hear the noise and the rattle—
How it swells, how it grows,
Like the crash of a battle,
Like the clash of the foes!

See it rushing and rising and roaring,
See it trying to touch a tall star:
It seems in the sky to be soaring
Like a flag of fierce flame from afar.
See it turning and burning and braving—
See it streaming and gleaming and red!
Ah! the smoke in the air is now waving
Like a winding-sheet of dull lead.

Hear it laugh with wild glee at each futile endeavor
To quench or to quell its exuberant force:
It is flaming and free and fantastic forever;
It delights and exults with no pang of remorse,
With no pain, with but passion—mad passion—it quivers
With its pennon of scarlet, the bloodiest hue,
With its gleaming streams and its rearing rivers,
It dares to do all things that flame dares to do.

How it darts, how it dances and dashes,
As though it had taken for aim,
To reduce all the world into ashes
And to fling all the stars into flame!
It is glittering and glowing and glaring—
And razing it rings its own knell;
It is showing its wonderful daring—
It is turning the sky into hell!

How it lazily lingers
With its swell and its fall;
With its fiery fingers
Woridly weaving a pall;
With its horrible hisses,
Like the wind in a storm;
With its hissing kisses,
On face and on form!

Of its flashes
Bereft,
Only ashes
Are left;
Till its cries
Tell its doom—
And it dies
In the gloom.

I have told you the tale of the terrible fire:
It has sung its last song to its luminous lyre—
It has sung its last song, it has breathed its last breath,
It has lived without life, it has died without death.

—Appleton's Journal for July.

For Forest and Stream and Rod and Gun.

In the Chippewa Country.

UNCLE SAM has large interests at stake in the northern and western portion of his dominions, and often has occasion to send special commissioners or agents to those regions to look after the proper enforcement of his Indian and public land policies. The instructions given me in the spring of 1875 required that I should visit certain bands of the Sioux and Chippewa Indians in Dakota, Minnesota and Wisconsin, and assign to them, in severalty, allotments of land in accordance with previous treaty stipulations. About the first of June I turned my face from St. Paul toward the northwest, via the St. Paul and Pacific Railway, in company with the agent for the Sisseton Sioux and his brother, whom I had found in St. Paul. Our first objective point was "Morris," a small station about 175 miles distant, where we were to leave the railroad and cross the prairie some seventy miles to the Indian agency. Arriving at Morris, we quartered for the night at the Falsom House, a small two-story frame with perhaps six or eight apartments, each as many feet square and divided by

pasteboard and wall-paper partitions, a fact that rendered all Caudle lectures the topic of mirthful conversation among the assembled guests the following morning. After breakfast a ride across the prairie to Foss Lake, some four miles distant, was in order. A clumsy, flat-bottomed scow was the vessel Mr. Foss rented to amateur fishermen at fifty cents an hour. Our circuit of this small lake resulted in the capture of a dozen or more large pickerel, upon which we amply dined and breakfasted. A team and driver from the Indian agency arrived the next morning, and we pursued our journey, having added to our company a companion in the person of Carlow, a fine setter dog. Carlow had been the property and companion of an English sportsman in that neighborhood the previous year, but having had the misfortune to lose an eye through the awkward shooting of his master, was left in charge of the freight agent, Mr. Fisher. Carlow was a thoroughly educated gentleman of the most refined and tender instincts and feelings, and since his residence in Morris had been deeply humiliated at the manner of his treatment; no one seemed to assume the role of patron; no one encouraged him with kindly sympathy or friendly greeting; had boys cast loose stones and stray clods of dirt at him as he rapidly disappeared around friendly corners; proletarian curs snarled their displeasure or vented their deeper malice upon him at every opportune occasion. Bored down with the weight of these afflictions and the want of an occasional nutritious bone, Carlow had degenerated into a mere shadow of his pristine strength, beauty and activity. A casual glance at him was sufficient to tell the whole story, and I found no difficulty in procuring Mr. Fisher's permission to take charge of the unhappy dog and use him during the summer. A hearty meal of boiled beef and potatoes—doubtless the first in many months—with a few friendly pats upon the head, at once rendered me the focal point of Carlow's affections and inspired him with a new life that was fully manifest in his joyous bark and scampering antics as we started for the Indian agency on the morning of the 9th of June. Our course was due west, and as far as the eye could reach on either side stretched the boundless prairie, a novel sight to one whose life has been spent in the older States. The grass was fresh and green, and the numerous small lakes studding the bosom of the prairie like diamonds of rare brilliancy set in the brightest emerald, relieved all sense of monotony. As we wound along the black and snake-like trail, first skirting the bank of some beautiful little lake, whose bosom was literally alive with wild ducks and geese, and anon far out upon the prairie that swarmed with plover, curlew and an occasional prairie chicken, our spirits became buoyant and we drank in the inspiring sights on that beautiful day until our hearts became filled with wonderment at the marvelous extent, richness and variety of nature's creative genius. The material instincts of humanity, however, soon overcame all dreaming propensities and Carlow was kept busy retrieving ducks and birds throughout most of the day. In this connection I noticed a peculiarity of the curlew—it may be familiar enough to those who have had much experience in shooting them, but was novel to me— which is, that the sound of a gun seems to attract rather than frighten them; thus at times, after firing, there would be three to half a dozen of these birds rapidly circling around the wagon, within easy range and uttering their shrill screams, which they would continue for half a mile or more unless sooner victimized themselves.

Thirty miles west of Morris we reached Lake Toqua, a fine sheet of water several miles in length, a peninsula at the north end of which is covered with a dense cluster of oaks, the only timber sighted since leaving the former place. Two squatters had already fastened themselves upon this priceless grove and had erected comfortable log-houses within its shelter at a distance of thirty miles from the nearest neighbor. One was a man who had in early life been a newspaper editor in Connecticut, but, crossed in love, had left the comforts of civilization and was now the husband of an dirty and ugly a squaw as I remember to have met with. Fish were so abundant in the lake that a reasonable number could be caught almost any time by standing upon the bank, casting a trolling spoon as far out as one could readily throw, and rapidly hauling in.

After dinner we resumed our journey over a country similar in all respects to that we had been traversing all day, and at dark reached Brown's Valley, twelve miles distant from the agency, where, to avoid a drenching, we ate supper and spent the night. Brown's Valley took its name from a former Indian Agent and person of considerable local prominence and wealth in the earlier history of Minnesota. He married a Sioux squaw, and though he died some years since in New York City—where he was attempting to perfect an invention of a steam wagon for navigating the prairies—his widow, three sons and three daughters still reside in the valley. Two of the daughters were educated at Georgetown College, D. C., and are fine scholars, musicians, equestrians or sportswomen. This valley occupies a singular position; it is a depression of an hundred feet below the general level of the surrounding country; perhaps a mile in width and two in length, and as far as the eye is capable of judging is perfectly flat. At one end of this valley lies Lake Traverse whose waters find an outlet through the Traverse des Sioux, Red River of the North, etc., into Hudson's Bay; at the opposite end is Big Stone Lake which, through the medium of the Minnesota and Mississippi Rivers, eventually mingles with the Gulf of Mexico, and yet the nearest point of approach of these widely diverging currents is not much in excess of a quarter of a mile.

From this point to the Indian Agency, the country continues level or gently rolling prairie. The Agency itself occupies an elevated site upon the summit of the first terrace or "Little Coteau," as it is commonly called. These "Coteaus" or hills of the prairie are of singular formation. They traverse the country from N. W. to S. E. for a distance perhaps of a hundred miles or more; they rise abruptly from the level prairie to the height of two to five hundred feet, but, unlike other ranges of hills, terminate in no sharp summits or peaks, and, viewing them from the plain below, resemble a great terrace or military earthwork. A closer inspection indicates that they are intersected in all directions by deep ravines; these ravines are filled with a heavy growth of oak timber, sufficient to supply the needs of the Indians for many years to come. On the summit of the "Coteaus" as far west as the eye can reach, and in fact nearly to the crossing of the James River, the country is decidedly broken and scarred with alternate hillocks and ravines, with scarcely more than a mile or two in any direction without a lake. These lakes are all shallow with but two or three exceptions, scarcely exceeding ten to twenty feet in extreme depth, and many of them that present quite formidable sheets of water in June are nothing but meadows of succulent grass by the middle of August, that but a few years since were the delight of the thousands of buffalo frequenting this region. The water of the lakes and streams is quite strongly impregnated with alkali, which increases in proportion as you travel westward. At Fort Wadsworth, twenty-seven miles beyond the Indian Agency, it is absolutely unfit for drinking purposes, and the only resource of the troops stationed there is to put up large quantities of ice in winter and drink nothing but melted ice in summer (spirited fluids of course excepted). The presence of this baneful substance is manifest in the milk, butter and eggs, and the hardness of the water must be broken with ashes or strong lye before it is available for washing purposes. The Indians occupying this reservation number some 1,700, and are the remnant of those formerly residing at Yellow Medicine and other points on the Minnesota River; they were largely engaged in the Sioux massacre at New Ulm and thereabouts in 1862, though numbers of them were then loyal to the Government and, at great personal risk, aided and rescued unprotected settlers from their bloodthirsty brethren. They are now provided by treaty with a reservation of nearly a million of acres, one-fourth of which is as fine agricultural land as any section of the country affords. The entire reserve furnishes fine grazing for stock, the only drawback being the length and severity of the winters.

After a few days spent in resting from the fatigues of travel, and in preparations for beginning the practical work contemplated by my instructions, I found myself armed and equipped after the following style—viz., one army ambulance and pair of good horses; one one-quarter blood Sioux interpreter, who also acted in the capacity of driver; one surveyor, with necessary instruments; one canvas wagon cover to be stretched across the wagon tongues and used in the capacity of a tent; one pair of blankets each; a rubber blanket, a gossamer waterproof coat for myself; one Fowler split bamboo rod; one breech-loading and one muzzle-loading shotgun; necessary cooking utensils and food, and Carlow, together with a native Sioux pony, which I purchased from a roaming band of Yanktonai Sioux, at that time visiting at the Agency.

It was our custom in this shape to leave the Agency each Monday morning, and after prosecuting assiduously throughout the week the work of surveying, marking and assigning to the various Indians their several allotments of land for future residence and cultivation, as well as, incidentally, the sport of shooting and fishing, to return to the Agency on Saturday night for a rest.

One Monday morning in the latter part of June found us en route for "Enemy" Lake, as the Indians designate it, near the western edge of the reservation, upon whose banks lived, or camped, a band of perhaps half a dozen lodges of the least civilized portion of the tribes, but who, hearing of my arrival at the Agency, had sent in word of their desire to receive allotments of land, and in future to follow the white man's mode of life. The road from the Agency leads directly to the foot of the "Coteaus" some half mile away, and winds along the sides thereof for a considerable distance, gradually ascending to the summit, from which a view of unparalleled magnificence and novelty is spread before the gaze. To the northwest and southeast, beyond the limits of human vision, stretches the huge back-bone or ridge, intersected in all directions with deep ravines, from which rises the thick, dark foliage of the great oak groves, while far out to the north and east and three hundred feet below you, is spread a vast expanse of perfectly level prairie, covered with the greenest and most succulent of grasses. From this point the road was simply an Indian trail, over a country more or less rugged and not particularly interesting until we reached "Enemy" Lake, some twenty-five miles west of the Agency. I at once assembled the Indians and had each one designate as near as he could the tract of land desired for his allotment, after which I caused the lines to be surveyed and marked, by which time the day was well nigh gone, and after moving a mile or so to the north, pitched camp on the shore of the lake, cooked our supper, and went to bed tired.

In the morning I rose bright and early, determined to have some fish for breakfast if possible, while "Billy," the interpreter, took a gun and went in quest of birds. A small "dug-

One day we had started what Holt denominated an "old she one," the most savage and dangerous animal we had yet encountered. The time she made through the canebrakes, and her off-hand, or off paw, manner of scattering the dogs, was, as far as our knowledge extended, without precedent. It did not take her long to distance most of the party. This excited Ned to a pitch of enthusiasm and determination that the occasion demanded, and being mounted on a tough old mule, whose hide seemed almost invulnerable, and whose endurance was without apparent limit, he soon distanced the rest of us, excepting always the indomitable Holt and the persevering Walne. This bear had a trick of veering suddenly to the left or right very unexpectedly, and on several occasions during the day Ned found himself in very close proximity to her in consequence. At last she came to bay in the thickest and most impenetrable canebrake she could find, and Ned, with his mule, regardless of consequences, made a rush to break his way through to get a shot at her.

He succeeded in reaching a point within a few yards of the animal, when the obstacles of further progress proved too great, and Ned and his mule at last fell to the ground, tangled in vines, briars and cane, and neither could rise. The bear, in her savage fight with the dogs, was moving nearer and nearer to the prostrate Ned, and soon discovered him. With open mouth and glowing eye-balls she rushed upon him. The mighty Nimrod had no weapon at his command but his hunting-knife, and, drawing it, he struck her full in the mouth. The faithful dogs in the meantime seeing the peril of their master, made desperate efforts to attract her attention. But not by the dogs, nor by Ned's superhuman efforts was the battle finally won; so at least I am fain to believe. Ned is always silent when pressed on that point, but I suspect that the mule, simply following his well-known instinct, kicked, and that the blow thus delivered discouraged the bear from further effort in that direction. I found afterward an indentation in the bear's head that corresponded in shape to the hoof of a mule. This question has never been satisfactorily settled in my mind; but I shall always believe the mule gave the decisive shot. Walne came up and liberated the prostrate horseman, and Ned's pluck being nowise diminished, he made a rush on foot through the cane. Soon the report of his rifle was heard, and on arriving at the spot we found him standing over the body of his enemy. This animal was the largest killed by our party during our hunt, and would turn the scale, dressed, at about 400 pounds.

It is a rule in bear hunting not to shoot deer or other game, as it is apt to mislead and demoralize the dogs which are trained to follow bear only. It is very difficult to train dogs to follow only bear, and but few packs can be found in this region that are serviceable in this direction. The pure bred foxhounds make the best bear dogs, though some old hunters claim that a cross between the foxhound and Scotch terrier produce superior; but terriers are too rash, and are almost sure to get killed on their first encounter with bruin. Our hunt was suddenly brought to a sad termination by the sickness and subsequent death of our beloved companion, Geo. P. Walne, by whose invitation we visited the Sunflower country. A nobler, more generous type of the old Southern planter is seldom met with. How could we remain longer? And, bidding farewell to the best hunting grounds it has ever been my fortune to visit, with sad hearts we broke camp and turned our faces homeward. I will say, in conclusion, for the benefit of sportsmen, that I have had experience in deer hunting in the Adirondacks, Northern Michigan and Wisconsin, Colorado, Southern California and Florida, and hardly think the Sunflower region equalled for abundance of this noble game, or ease in obtaining it. Deer seem to be as plentiful here as in either of the above-mentioned localities, while wild turkey and water-fowl abound in great numbers. The steamers Fair Play and Sunflower Belle make semi-weekly communication between Upper Vicksburg and the Sunflower. Capt. Bookout, of the former, and Dent, of the latter, are first-class sportsmen, and interest themselves in forwarding the wishes of all who visit this region. They will leave you anywhere you desire, and always make a landing when passing your camp to bring or take your mail.

The climate during the early winter months is superb, having sufficient frost to kill all insects, yet warm enough to make camping out a pleasure. After January 1 rains are more frequent and the climate less agreeable. H. L. S.

LONG ISLAND RESORTS.

THE PECONIC BAY VILLAGES—NOYAC AND NORTH SEA AS SUMMER RESORTS—SHOOTING AND FISHING FACILITIES.

NOYAC, L. I., May 25, 1878.

I have located during summer months at various resorts of country visitors, but never have I been in any place which so exactly suited me as does the village of Noyac, Long Island, situated about four miles northwest of the old town of Sag Harbor, in Suffolk County. People go to the country during hot weather for divers reasons. Some go out of town because "it's the thing to do, you know." Others, simply for healthy relaxation; others again for sporting purposes; while still others leave town simply to while away time or get rid of ennui. Now, when I "get up and get," as the "sports" say, I do so for the purpose of breathing pure air, eating fresh food, enjoying mental rest, and especially to take things easy. I have no notion of going into the country to dress up and pay attention to the conventionalities of city life, as some people do who go out of town to the fashionable watering places; consequently I seek out retired localities unknown to Mrs. Grundy and her crowd—places where I can dress as I please, and, in the full sense of the term, take everything easy. Hence I have for the past four years selected this sequestered village of Noyac for such leisure days as I can steal away from my desk labors in the city.

As I said before, I selected that spot because it was out of the way of the run of summer tourists. I get up at daylight in the morning, put on my blue flannel pants and shirt and an old straw hat, and then am dressed for the day, ready to go rowing or fishing, shooting or driving, play croquet or loll on the turf beneath the shade—in fact, enjoy my "otium cum" like a sensible fellow. What with the pure air which prevails here, invigorating breezes wafted from the Atlantic or over the Sound waters, and the clear crystal water which rolls on the white, sandy beach; the homestead fare at my boarding house and the opportunities afforded for pure frolic and enjoyable relaxation—a week or so of all this makes quite a new man of me.

But I think I hear a reader say, "Tell us all about this place you extol so? How do you get there? What does it cost? Where do you board and what do you pay? What kind of fishing and shooting is there to be had?" and so forth. Here, therefore, is my answer to these several pertinent queries.

You can get to Noyac either by rail or steamboat; that is, you can go to Sag Harbor by the Long Island Railroad, fare \$2.50, or by the steamer W. W. Coit, from Pier 25, East River, fare \$1.50. The trains leave at 8:30 A. M. and 4 P. M., and the ride to the Harbor occupies about four hours. The boat leaves Tuesday, Thursday and Saturday at 5 P. M., and reaches the Harbor at 6 A. M. the next day, passing Shelter Island, Greenport, etc., a very pleasant sail of a hot day. From the Harbor you reach the village either by a hack—\$1.50—or the boarding house proprietor you stay with comes for you on due notice of day of arrival. You can get board at any of the farmhouses where they take boarders at \$7 a week or \$1 a day. Two of the residents of the village make a specialty of boarding, Nathan Pierson and Dr. Thomas. The former has an old homestead, and his good wife is very happy in making her boarders feel at home. Dr. Thomas has a large and new house, and he is prepared to do likewise with his guests. Now as to the fishing. In the bays—Noyac and Little Peconic Bays, on the shores of which Noyac is situated—there are blue fish, king fish and other fish peculiar to the eastern waters of the island. But—these huts are sad things—the fact is the pound nets have played the deuce with the good fishing one used to have here, still you can get good sport occasionally. Certainly as regards blue fish excellent sport is to be had in the rapid tide waters which run past Jessup's Neck—the headland of the promontory which divides Noyac Bay from Little Peconic Bay. In the way of shooting, the fact that you cannot pass along the road of a fine morning without flushing quail, or through the woods back of the road without starting up partridge or woodcock, speaks plainly in this respect. Snipe, too, in season, are found on the sandy beach at the shore of Jessup's Neck and in the little inlets, while duck shooting in the fall is one of the shooting attractions of the locality. But for rowing, sailing and bathing facilities this place cannot be beaten by any resort at the east end of Long Island, and as for beauty of scenery and extent of prospect it is unequalled. Just now the place is really lovely. The bright green foliage, with the combined fragrance of the woods and the pure sea air is worth a visit only to enjoy for a day or two. But I am trespassing on your space, and will avail myself of another column later on in the season to write about North Sea and adjoining places.

OLD SPORT.

A BUFFALO HUNT IN THE FOREST AND STREAM OFFICE.

OF course all of the readers of the FOREST AND STREAM have gazed upon its cover and noticed an animated and exciting representation of a buffalo hunt. The first thing in this picture that attracts a Western man's attention is the ridiculous position of the sportsman. Examining this picture carefully, and you will soon discover that the daring hunter is mounted on an English saddle; he is standing up in the stirrups, holding the bridle high above the horse's neck, his right arm crossed over his left, and is shooting with a bulldog pistol, barrel two inches long.

In the left-hand corner of the picture is what I suppose to be a buffalo skull, but which looks as though it had on spectacles. I was in the office when the editor received a letter from a Southern lady saying that she thought the picture a mistake. The look of disgust that overspread the face of Mr. Hallock would compare well with the picture under consideration.

Then he remarked: "The idea of writing us a letter saying that cut is a mistake, when our artist spent one whole summer hunting buffalo, and found one old bull; and he used to get up early in the morning, and run him until late in the afternoon every day for three weeks. The bull lasted well, and our artist returned satisfied that he was capable of making a cut for the FOREST AND STREAM."

The mystery was solved the moment he commenced his story about that old bull. I knew at once how it happened. The buffalo that this artist hunted is known to every Western man on the plains. He lived in our place for many years and was known as "the one-eyed buffalo of the Republican." This same old fellow had been hunted from time immemorial, and is the identical bull which made "Buffalo Bill's" reputation. The secret of this picture on the cover of the FOREST AND STREAM is, that when the artist saw this old bull standing in a canyon he made a rush for him. Of course he ran up on the left side of him, but you can't fool an old bull, and as soon as he heard the artist's wild cry he ran around on the other side of the intrepid hunter, so he could see what was causing the excitement!

The moment his one eye rested on the young hunter from the East, his bulldog pistol and English saddle, he at once entered into the spirit of the chase with a vim, and did his best to give the FOREST AND STREAM artist an interesting course of instructions in buffalo hunting. Having finished his studies, the artist returned home and left this old veteran bull quietly running in the valley of the Republican. He was doomed to a sad fate however.

No buffalo could spoil the cover of the FOREST AND STREAM with impunity. When the Western men saw that cover they one and all swore vengeance on the old bull. An opportunity soon offered to dispose of him. The Grand Duke Alexis came to this country for a buffalo hunt. General Sheridan took him in charge and went to the Republican. As they were preparing to break camp one morning the old bull hove in sight. The command surrounded and drove him into a deep canyon where he could not turn round. Bill Reed held him by the tail until the Grand Duke, with the assistance of Sheridan's command, destroyed him. DR. W. F. CARVER.

Forest and Stream Office, June 20.

[We are at a loss which to admire the more—the ingenuity of the above, or its audacity. To steal into a hostile camp and slay the enemy with his own sword, is, we believe, a perilous and notable exploit in war. What shall we say, then, of the man who has crossed a Continent, invaded an editor's sanctum, seated himself at the editor's desk, and with the editor's pen sought to cast ridicule upon the editor's own paper? The deed is audacious, preposterous, unparalleled, un— We have nothing more to say. That noble specimen of his bevine race shall remain. He shall sink or swim, live or die, survive or perish with this paper, and let no buffalo-hunter of the whole North American Continent think to tame the fire that still illumines his one eye.—EDITOR AND ARTIST.]

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

Fish Culture.

HABITS OF EELS.

EDITOR FOREST AND STREAM:

Mr. Roosevelt, in your last number, speaking of the habits of eels, says the facts are "that the grown eels go down stream late in the fall; the fry—minute, semi-transparent, evidently just hatched—make their appearance in the spring before their parents come out of the mud where they have lain dormant during the cold weather, and the fry go down to the salt water almost as soon as hatched, and that the only fact yet unsettled is the time of the return to fresh water."

Now, the habits of eels in Mr. Roosevelt's ponds and the habits of the same in the Sagadahoc River must differ very much if I am correct in what I consider facts, which are that the grown eels go down to the bay late in the fall, staying there in the warm water all winter. The young, from four to six inches long, make their appearance here in the spring coming up from the bay, keeping close in to the shore and making good time. When the water is clear they appear a dark, wavy line, from one to several feet in width. These fry leave the shore as they increase in size and strength, penetrating to the headwaters of the river and its branches; when returning to the bay in the fall they are about one foot long, and are called here the black eel, and will average two feet long when grown.

In this river, in my opinion, no eggs would hatch in the spring if deposited in the fall, owing to the floods and ice-gorges, which even kill grown fish. Furthermore, if they did hatch after lying all winter, the fry would all appear at the same time, which is not the case, for they run up at intervals all through the spring as they hatch out.

That young eels when first hatched should drop down with the stream, I think natural, for shad and other fish fry do the same.

When seen here the eels must be three or four weeks old, and steadily fight their way up, overcoming every obstacle; sometimes the belt of eels narrows down to a mere line as they pass close to the shore to get above a rapid, and then, reaching quiet water, spread out and resume their march with an insistent which appears as strong in a little thread of life three or four inches long as it is in a fifty pound salmon on his run from the sea.

The fishermen say, and I believe, that the grown eels return up the bay and river (and spawn, no doubt) at the same time as shad, herring, etc., eating immense quantities of the eggs of these fishes, and also attach themselves to the shad and eat their way into the eggs. This mostly occurs when the shad are fast in the gill-nets, but some fish are taken with the eels in the river that have eels hanging to them. Eels, I think, are more destructive to the shad and herring than anything else except the inventions of man.

There has been a great deal said about the number of young shad eaten by black bass, but if they attack the eel fry that pass up the river every spring, they will do more good to the shad than harm in the end.

Professor Baird must be right in finding spawn in eels in March, this year especially (if it can be found at all), as the water in our bays and rivers was unusually warm for the season.

Just here I wish to say that, having been much interested in the articles in your paper on the connection between the movements of sea fishes and the temperature of the water, I have noticed its effect on the shad in this river, which, being broad and full of rapids and falls, chills very quickly, and a sudden cold snap in March or April, after the water is warm enough to bring the fish up, makes them immediately drop down stream again, as is proved by the fish dams beginning to catch them. This shows how delicate they are to changes of temperature. B. T. B.

June 17, 1878.

LOOKING AFTER THE FISHWAYS.

PORTLAND, Me., June 17, 1878.

EDITOR FOREST AND STREAM:

I have just returned from a professional visit, as engineer, to some fishways in the Eastern part of the State. Maine will soon lose the country in this matter, if, indeed, she does not already. Salmon retelling here from ten to fifteen cents per pound. Maine salmon are considered of better quality than those from the Dominion, and command higher prices in Boston market. Within a very few years Maine waters will afford more varied and finer fishing than can be found elsewhere in North America. Already there is the black bass fishing, land locked salmon of two varieties, the largest known trout, pickerel, white and yellow perch, etc. In fact, all of these in such abundance as to afford fine sport anglers, and there will soon be good salmon fishing with the rod. We expect to build five fishways on the Kennebec River the present year, and a number upon smaller streams. Salmon were supposed to have become extinct in the Saco River, but a few fish have been taken there recently, and now the Saco people are clamoring for a fishway. Making a specialty of the construction of fishways, I shall hope to receive calls for service in other States as the work and interest increases. Instead of the long and expensive trip to Canada for salmon, American sportsmen will soon swarm to more accessible Maine. I expect soon to accompany Mr. Stillwell, our energetic Fish Commissioner, on a tour of examination of the various falls and dams of the Kennebec River. The most important of these is at Augusta. While I was examining the great fishway at Bangor, the water was shut off for a few minutes, and salmon and alewives were found in the act of going through. An efficient warden in charge is doing good work by vigilantly watching and prosecuting poachers who attempt to net fish too near the dam. S.

STRIPED BASS IN THE GENESSEE RIVER.—Rochester, June 28.—Mr. Editor: I have been thinking that some of our inland waters could be stocked with the striped bass, and have just made a successful attempt to stock the Genessee River tributary to Lake Ontario. I had one of my men, Mr. A. W. Marks, obtain as many fish as he could, take charge of and bring them to Rochester for the above river. He obtained 142 bass and succeeded in placing 140 in the river in fine condition. This is the first attempt, I believe, that has ever been made to transport the striped bass alive. The fact, then, is established beyond a doubt that bass can be transported successfully in warm weather. I intend placing more in some other of our inland water, and will then await the result of the experiment. SETH GREEN.

A FRENCH LEECH FARM.—The subjoined account of a curious industry in France, we believe will be novel to many enthusiastic fish culturists:

One of the leech farms which were established by M. Laurus, is at Parempuyre, about nine miles from Bordeaux. Here an area of about four hundred acres, near the Garonne, is devoted to this industry. The marsh is subdivided into compartments of five or six acres in extent, each of which can be inundated separately. Each compartment is intersected with drains and can be flooded or laid dry at will by opening the hatches with which the ditches are provided. Besides these breeding grounds, there is a reservoir, which is replenished at every opportunity with the larger leeches, so that, when the other beds are laid dry, there is always a stock on hand ready for the market. This reservoir is always kept covered with water to the depth of three to five inches and holds from forty to fifty thousand leeches to the acre,—a rate rather larger than that observed in the breeding ponds, which are populated to the extent of thirty or forty thousand leeches per acre. During the cold season the leech remains quite underground; but the first rays of the spring sun bring him out, and then a troop of horses is made to enter the breeding grounds, in the proportion of ten to the acre. The leeches attach themselves to the lower part of the legs of the animals and then gorge themselves. The same troop of horses remain on service for five or six hours, when they are recalled and tended and sent back to their pastures, where they are allowed to rest and regain strength. After eight or ten days' rest, the horses are again dispatched on duty; the hitherto unfed leeches and those that have digested their last repast come out again, and from about the first of March to the middle of June they are thus fed about eight or ten times each.

In June the leeches all go underground, and the laying dry of the parks commences; the horses are kept out of them, the weeds and reeds are allowed to grow, and the soil becomes better knitted together, as it were. In July and August the leeches come out to deposit their eggs in the tufts of herbage, and then the drains before mentioned are filled with water enough to keep the ground moist. The leeches, having performed this duty, again burrow underground, and in a short time the young ones make their escape from the eggs.

The parks are inundated, and at the end of August the fishing commences. The fishers, protected by high boots, enter the ponds, arranged in lines, and beat the water with sticks to arouse the dormant leeches, which soon appear in great numbers, ready after their long fast for another feast. The large ones are carefully lifted out and placed in bags, with which each person is provided; and the line of fishers gradually advances till the whole bed is thoroughly beaten. It is then left to be subjected, three or four days afterwards, to another careful search, a sufficient stock being always reserved, in the shape of young and small leeches, and those that, not having digested their food, do not put in an appearance on the unceremonious summons of the collectors.

An establishment such as that described above will produce several million leeches annually in a healthy condition.

Paris alone consumes some twelve million leeches annually; and, prior to the establishment of the system of producing them in artificial reservoirs, the annual importation into France from abroad, exclusive of its own production, was nearly fifty millions. The enormous demand for these useful surgical attendants throughout the world may be estimated from the above figures.

Natural History.

MACKEREL ON THE NOVA SCOTIA COAST.

HALIFAX, June 19, 1878.

Mr. Editor: In some papers published some time since in the FOREST AND STREAM upon the habits of the mackerel, it is asserted by Prof. Brown Goode that there is no reliable evidence of mackerel being seen upon the coast of Nova Scotia after the 25th of October, quoting me as his authority. Had he quoted me as giving the 1st of November, 1868, when the fish market at Halifax was full, I should have felt more complimented, as I should have known he had read my paper with more attention. In summing up my remarks I stated that mackerel remain usually all November on the surface in N. Scotia, and during mild winters linger to December. This, Prof. Goode says, is not reliable as scientific evidence, because no specific dates are given. To admit this would be to destroy almost the whole mass of information compiled in the report of both the Royal and American Commissioners of English and American Fisheries. But as I am certain that Prof. Goode's desire is to have the truth simply, will you allow me a place in your columns to add to my previous assertions such specific dates as I may be able now to obtain though not admitting his principle.

On May 23, 1875, going into the Halifax fish market, I asked generally how long are mackerel in market? I was answered, generally all through November. On asking how long in December they had known them in market, Mr. Grey-wire said: "I recollect them as late as the 10th of December. We keep our nets out to the 30th of November. Men hire to that time. Mackerel are seen after that date, but the seas are so boisterous that our nets are destroyed. Some few parties will keep them out in December in spite of cold and storms." Mr. White corroborated this. Mr. Thomas Brackett said he had taken them often in December, and often in weather so cold that the fish were frozen in removing them from the meshes of the nets, but could remember no dates. Mr. Wm. Duffy stated he saw one once on the 24th of December. He recollected it because it was Christmas Eve, and on account of its rarity; but he had frequently taken them during December, though having no dates. The nets used are about two fathoms deep, set near the shore in about five to ten fathoms of water. My own recollections, but without dates, are seeing stops made in very cold weather and frozen ground, which must have been late in November. I think I have now made good my assertion that they linger to December, and that in any future history of their habits it must be assumed as truth that they remain in numbers during November, but are found sparingly later on our coasts. Where they are during those dates in any intermediate point from Maine to Virginia, must be left to American observers. When these blanks are filled and a generalization made their history will be more complete, a task we may well leave in the hands of the American Commissioners of Fisheries.

In my paper (1865) I speak of their asserted torpidity and

the story of their blindness as needing more proof before they are asserted as facts. I have had nothing to alter my opinion since. In examining the eyes of many mackerel on May 23 and 27 and October 27, in different years, I have found that, as in most fish, the bony orbit is much larger than the base of the eye, and that the space is filled by gelatinous substance, which may be called cellular membrane and adipose deposit, to this transparent membrane arising from the outer angle of this orbit spreads half way over the pupil of the eye. It may easily be raised and defined by passing a pen-knife between it and the eye. At the inner angle there is also a similar, but much smaller, membrane, not reaching to the eye. As the mackerel appear on our coasts about the 15th of May, and these observations were made the 23d, I do not think it can be asserted the eye is closed entirely in spring; and as the same appearance is found in September, we must admit it to be a permanent structure. An analogous membrane is found in the eel, and doubtless other fish. On asking Thomas Lloyd, our roughest and oldest fisherman: "I don't know anything about the scales of the eyes, but I do know that, curse them, they see too sharp for us, steering clear of our spring nets," and doubtless old Tom was right.

On dissecting a mackerel, May 23, I found the heart first presenting the tri-cornered ventricle with its white aorta and deep red auricle resting upon the fringe of coeca that covered the intestines, sweeping down to the vent. The liver and stomach were both covered by the coeca. The latter was about three inches long, its upper lobe thick and round, but ending in a narrow tail or point. The cardiac end of the stomach was prolonged two and a half inches, ending in a point. The coeca were attached to the gut about an inch below the pylorus. There was but little difference in appearance and size between stomach and gut. This we may roughly sum up: Stomach and gut very simple; coeca unusually large and complicated; liver small, all noteworthy facts in the study of comparative life. The fish being a male one, lobe on either side of ivory-white; melt reached from gills to vent, slightly adhering to the sides by thin membrane, and covered by a similar one. They were divided in lobes by shallow lines, the upper lobes slightly fimbriated. On removing both entrails and melt a dark-purple space about an inch wide extended from gills to vent beneath the back bone. This, when opened, seemed filled with coagulated blood. It had in some respects the appearance of the air bladder in the salmonids, though wanting in the direct communication they have with the oesophagus. But this communication is also wanting in the gadids, where especially in the hake, the air bladder assumes its highest form of organization. I have often found coagulation and reticulated plexi in air bladders of other fish.

It has been asserted the European mackerel have no air bladders, and a new genus proposed, but with more probability they have the same organization as our own, and the difference lies in the opinion whether or not it is an air bladder.

The mackerel appear on the Atlantic coast of Nova Scotia, and almost simultaneously on the Bay of Fundy, about the 15th of May. Nearly all spawners, male and female perform a somewhat easterly and northerly route, disappear from the surface in a few weeks and reappear again in September without spawn and fat, remain in numbers during November, and very sparingly during December, coming from the eastward and then disappear. It may be asserted generalizing from observation extending over a series of 8 or 10 years, that they are irregular in their movements as regards localities, though probably not as regards ocean surfaces.

The very great difficulty of accounting how these enormous masses of surface feeders find food after disappearing from the surface has caused many ingenious theories, as to the question in what state and where they pass that time. These are all pleasant reading, but valuable more or less as regards the ingenuity and scientific standing of the writers. In this paper and the one I enclose (1865) I have stated what I think are facts, and which must be accepted in the future history of American mackerel, which I hope soon to see written by the Commission which has already done so much in Atlantic waters.

BERNARD GILPIN.

OBSERVATIONS ON CERTAIN FISH IN THE U. S. NATIONAL MUSEUM.

The following carefully prepared description of some new fish is a valuable contribution to ichthyology. The Burbot, or American fresh water ling, has caused a large amount of disputation. Dr. Bean seems to have considerably narrowed down the question, as he proves quite clearly to our mind that there is but one species in American waters:

1. *Lucania parva* (B. and G.) Bean.—In the Ninth Smithsonian Report, 1855, Baird and Girard described a small Cyprinodont under the name of *Cyprinodon parvus*. An examination of the type specimens proves the species to belong to the genus *Lucania* of Girard. They have a single series of conical, recurved teeth in each jaw, and the other characters ascribed to the genus. The affinities of *Lucania parva* with *L. venusta* and *L. affinis*, Girard; not with the unnamed species which Günther has taken as the type of the genus *Limnurus*. The National Museum has *L. parva* from Beesley's Point, New Jersey, and Greenport, Long Island (S. F. Baird), Sinepuxent Bay, Maryland (Otto Logger), and Noank, Connecticut (U. S. F. C.).

2. *Trichodon octonemus* (Girard), Gill.—In a fine collection of fishes received last week from Mr. Silas Stearns, of Pensacola, Florida, is one individual of the above species. Inasmuch as it is not often observed, I give some additional particulars drawn from two of Girard's types and the Pensacola specimen: Size—Type from Brazos Santiago, Texas, 63 to 85 millimetres (2 1/2 to 3 1/2 inches). Pensacola specimen, 62 millimetres (2 1/2 inches). Proportions—Eye, 3 1/2 times in length of side of head; upper jaw, half the length of side of head. Head contained about 3 1/2 times in length to end of middle caudal rays. Some of these measurements differ from Girard's, as given in the Ichthyology of the U. S. and Mexican Boundary Survey. Scales: 6—50—12. Radial Formula: B. VIII; 1st D. I, VII; 2d D. I, 12, A. III, 13; P. 16; V. I. 6. Girard refers to the Brazos Santiago specimens as adults. If so, they represent a very small species of the genus.

Two other species of the same genus are known from the coast of North America—*T. plumieri* (Lac.) Gill, and *T. octofila*, Gill. The former has but seven pectoral appendages, while *T. octonemus* has eight. *T. octofila* may be distinguished from *T. octonemus* by observing that it has in the second dorsal eleven soft rays. Its first dorsal is punctuated with black, and its pectoral is almost wholly black, while *T. octonemus* has no such markings. The upper jaw in *T. octofila* is contained nearly 2 1/2 times in head, and the longest pectoral filament reaches scarcely to the vertical from the middle of the interval between the dorsals. The longest pectoral filament in *T. octonemus* extends beyond the origin of the anal. Concerning this species Mr. Stearns writes: "No. 45 unknown. The first and only specimen that I have seen. Unknown to the fishermen. Captured by me at the surface

of the water in this bay (Pensacola), with a slight wound in the belly and apparently dying." The only known specimen of *Trichodon octofila* is the one taken at New York by Mr. J. Carson Brevoort, and presented by him to the U. S. National Museum.

3. *Lota maculosa* (Le Sueur), Rich.—The American fresh water ling, burbot, or eel-pout, has been the occasion of no little description and disputation. Forster and Pennant referred it to the *Gadus lota* of Linnaeus. Their examples were from the Hudson's Bay region. In 1817, M. Le Sueur, in the Journal of the Academy of Natural Sciences of Philadelphia, published descriptions of two supposed new species of burbot—*Gadus maculosus*, from Lake Erie, and *Gadus compressus*, from Northampton, Connecticut. In February, 1819, Mitchell described his *Gadus lacustris* in the American Monthly Magazine. He spoke of it at the time as identical with the Lake Erie burbot, which is true, and the name must be regarded as a synonym of *Gadus maculosus*. In 1819, Le Sueur, in *Mémoires du Muséum d'Histoire Naturelle*, re-described *Gadus compressus* under the name of *Molva huxita*. In 1849, Zoology of New York, Fishes, DeKay described *Lota inornata*, from the State Cabinet at Albany. In 1844, Boston Journal of Natural History, D. H. Storer described the Winnipissogee Lake burbot—*Lota brosmiana*. From this it will be seen that six species of burbot have been claimed for American waters, that from the Hudson's Bay region being identical with the European. Various and conflicting have been the opinions of writers concerning the validity of these species and their relation to one another. *L. inornata* was early challenged and relegated to the shades of synonymy, *L. brosmiana* with *Gadus lota* soon following, to keep it company. *Lota compressa* was believed longer, but that, too, has lost support. Günther, in the Catalogue of Fishes in the British Museum, vol. IV, 1862, places all the names applied to the American burbot in the synonymy of *Lota vulgaris*, holding that we have only one species, and that identical with the European. Even if his view were correct, he should use the name *Lota maculosa*, which really has priority over *L. vulgaris*. Cuvier did not use the name *Lota vulgaris* anywhere, so far as I can learn, although it is attributed to him. He does refer to *Gadus lota* and *La Lotte commune*, but he who seeks *Lota vulgaris* in the Regne Animal, or in Griffith's Cuvier will seek in vain. Jardine says nothing of *Lota vulgaris*, though it is credited to him. The first author to use and claim the combination was Jenyns, in "A Manual of British Vertebrate Animals," Cambridge, 1835. If, then, Europe and America have but one species of burbot in common, its name should be *Lota maculosa*, but of this more hereafter. Just here it may be supposed that I have overlooked Walbaum's *Gadus lacustris*, based on Pennant's description of the "mathemeg," or "land cod," of the Hudson's Bay region, and referred by later writers to the genus *Lota*, but not as: Pennant probably described the "mathemeg" from hearsay, and supposed it to be allied to the burbot, to which it has no close relationship. The "mathemeg" was really a catfish (See Richardson, "Fanna Borealis Americana," page 135, and Jordan, in Bulletin X., of the United States National Museum, 1877, page 84). Walbaum was misled by Pennant's careless blunder, and in his turn misled others. It is now pretty generally believed that only one species of *Lota* is found in the Old World and the New; but perhaps no better opportunity for reaching a conclusion could be afforded than that presented by the large collections of the National Museum. It has been my privilege to study specimens from the Hudson Bay region, the Yukon River, the Yellowstone, the Little Big Horn, the Great Lakes, Seneca Lake, Lake Winnipissogee, the Connecticut River, and other parts of our own country, and from England, Sweden, France, Switzerland and other parts of Europe. Many individuals have been submitted to careful measurement and comparison. I have been unable to find anything upon which to separate the European and American species, save the number of vertebrae. Of course FOREST AND STREAM could not burden its columns with the long tables of measurements which have been prepared, but they will be presented at another time and place. I can only say here that I am forced to believe that but one species of *Lota* is so far known to America, and this is to be determined in no other way than by comparison of specimens from all the localities whence species have been described. Differences more apparent than real account away under dividers and the proportional scale. Having adopted the name *Lota maculosa* for the American species, since the European, so far as my examination of the skeletons goes, has a smaller number of vertebrae I propose, for the present, to call it *Lota maculosa* (Le Sueur), Rich., variety, *vulgaris*, Jenyns. I have counted the vertebrae in two American specimens, and find twenty-four abdominal and forty caudal. In two European they were, abdominal twenty-two to twenty-three, caudal thirty-eight to thirty-nine. Günther gives a still smaller number (21x28).

Notes on the habits, distribution, etc., of the *Lota maculosa* must be reserved for a future paper. To those who doubt the propriety of using Le Sueur's name *Maculosa*, I must say that a series of surprises awaits the student of its synonymy.

In unraveling this synonymy, I have received valuable assistance from Professor Gill, and in determining the significance of certain anatomical characters.

4. *Amiurus lacustris* (Walbaum), Bean.—The *Pimelodus borealis* of Richardson (*Amiurus borealis*, Gill), is, in my estimation, the "mathemeg" of Pennant and the *Gadus lacustris* of Walbaum, hence I adopt for it the name *Amiurus lacustris*.
U. S. National Museum, June 23, 1878. TARBLETON H. BEAN.

RARE ANIMALS OF THE ROCKY MOUNTAINS.

BY J. H. BATTY.

THE fauna of the Rocky Mountains, and particularly that of their highest peaks, is exceedingly interesting. In the snow ranges, animals of curious forms and habits abound, and but few zoologists have had an opportunity of studying them. Even those who have made short excursions in the lower and most accessible ranges have visited them when hostile Indians were least liable to be met, and but partial investigations and hasty returns were made. The geology, botany, mineralogy, ornithology and conchology of the Rocky Mountains is much better known than the zoology. The latter branch of natural history is very difficult to study, and requires experience, perseverance, endurance, craftiness and keen observation in the explorer.

Having made a special study of the animals of the mountains during two years of steady hunting and trapping, I give the following original data on the rarer species, which is a part of the results of my researches: The Rocky Mountain bison is now nearly extinct, and, though accepted by some as a species, it is nothing more than a small dark variety of the common buffalo. I have found their skulls on many of the highest peaks of the mountains, also on the tops of the Bear's Paw, Sweet Grass and Sierra Madre mountains. They were commonly found in the Rocky Mountains above the forty-ninth parallel, and they are probably to be found much further north, to the extreme northern range of the buffalo. In accordance to the statements of old Indian and white hunters, the bison of the mountains were all bulls, roaming

singly or in twos or threes. They are known as "roamers" by the Indians, and are said to be driven from the herds of the plains. Their solitary life, lofty habitat and variety of feed may cause them to vary in size, color and habits. Climatic variations in size and coloration are common with birds and the smaller mammals, and why should the Rocky Mountain bison be an exception? The common buffalo are as different in anatomy and color as some breeds of domestic cattle. I have killed bulls from the same herd and of about the same age that differed in color, size, form, length of tail, and size and shape of horns.

The Big Horn or Rocky Mountain sheep is another curious inhabitant of the mountains. Marvelous stories of his terrific leaps have been told and exaggerated, until the most credulous hunters believe that he can leap extravagant distances from cliff to cliff and alight on his great horns uninjured. The agility of the mountain sheep is indeed remarkable, and he rivals the chamois of Europe in climbing. Both sexes and the young of the mountain sheep make long leaps recklessly over rocky mountain sides, but they alight squarely on their feet, with toes spread to their widest extent, instead of on their horns. The sheep and lambs will descend steep mountain sides with the same agility as the adult ram, and they will follow wherever he may lead. On three occasions I have seen hands of the big horns make head-long retreats down steep mountain sides. They will gallop over loose stones with ease, where one would think they could not possibly find a footing. I have seen an adult male make a clean leap of thirty-five feet (by measurement) in the mountains of Colorado, and pass over a declivity of about 600 feet, by successive leaps, without slackening his pace in the least. When striking the ground after the first leap he slid about fifteen feet through snow and mud and over loose stones, with the toes of all feet broadly extended.

The big horn sheep are more numerous than is generally supposed, and inhabit a wide tract of country. They range as far south as New Mexico, where they are abundant on some mountains. In Colorado I found them in small bands throughout the Sierra Madre Mountains, but owing to the inaccessible nature of their haunts they are seldom seen. In the Sweet Grass and Bear's Paw Mountains of Northern Montana, I have seen them in bands of nearly a hundred, and their whitish looking trails over those mountains on the loose rocks can be seen for miles from the plain. The Yellowstone Valley is a favorite resort for the big horns, and I have often observed them in the bad lands of Dakota, and in the valley of the Missouri, from Fort Benton down the river for eight hundred miles. The big horn has more the habits of the goat than the sheep, and has the stiff-legged lope of the former. He is very tenacious of life, and a .44 ball shot from a Sharps sporting rifle, through the base of the horn and part of the skull, failed to have any perceptible effect on an adult ram. An adult male in medium condition will weigh one hundred and forty pounds dressed, and a doe from ninety to one hundred and twenty pounds. The enormous horns of the old rams are greatly out of proportion to their bodies. I once killed one whose head weighed forty-two pounds. Near the base of the horns, over the brow, they are rough and have a weather-beaten appearance, which is natural. It is, however, unusual for them to be rough, as the horns of most individuals are worn and have a smooth surface on their fronts near their base. It is produced by the animals butting and rubbing their horns against the rocks, a peculiar habit they seem to take a pleasure in. In a pair which I have sketched the tip of one of the horns is wanting. This is the case with every pair of adult horns that has come under my notice. Many pairs have both their tips splintered, which is caused by fighting or butting them against the rocks. The horns, which I preserved, are 37 inches long; spread at tips, 17.50 inches; spread at middle of horns, 23 inches; circumference of single horn at base, 14 inches. The horns of another are 30.50 long, with a lesser spread of but 20 inches, and a circumference of 16 inches at the base. The latter dimensions are more in proportion to the average horns.

The mountain goat is one of the rarest large animals of the Rocky Mountains, and only inhabits the northern ranges. The Cascade ranges are said to be the southern limit of its range, though from its heavy coat and general appearance it probably migrates to the arctic regions in summer. Although having hunted one season where the goats are said to range, not one was seen nor any sign of them. What data I have of them was given me by three hunters that were camped on the upper Missouri. They killed nine in the Blackfoot Country in '74, where they were found in small bands on the highest mountains. It appears that they are even better climbers than the big horns, and are more wary and difficult to shoot. When alarmed they retreat to the highest mountain peaks, where it is next to impossible to follow them. The best time for hunting them is at morning and evening when they come down from the rocky peaks to feed on the grassy slopes. The mountain goat is nearly white, with a long banging coat and beard. Its horns are like those of the female mountain sheep and domestic goat. Its legs are short and strong, and the flesh resembles mutton.

THE WHITE-HEADED EAGLES IN THE HUDSON HIGHLANDS.

(Read before the Linnean Society of New York, April 6, 1878.)

BY EDGAR A. MEARNS.

IT may interest some of your readers to learn that the bird that has been honored with the distinction of being adopted for the heraldic representative of the famous Confederacy of the United States is abundant here in the Highlands of the North River, where it constitutes a marked and romantic feature of the superb scenery of this part of the Hudson, lending another charm to a scene already grand and impressive, but rendered sublime and awe-inspiring by the presence of this noble bird, seen perched upon some blasted tree above the massive cliffs, or soaring—the merest speck—in the higher atmospheric region, far above reach of the coming tempest, while its shrill scream falls faintly upon the ear, answering the loud, quivering cry of its nearer mate. In winter, when the river is frozen, the eagles are seen soaring above the mountains, searching for the scanty prey upon which they are obliged to subsist when fish, their favorite food, is unobtainable; but later, when the ice is in motion in the Hudson, carried swiftly by the current, numbers of them may be seen sitting in pairs upon trees low down by the river's edge, watching for their finny prey, or else floating upon the ice-cakes in the stream, in company with the crows and gulls. In summer their favorite perch is upon some withered tree

on the mountain's side, from which, at intervals, they descend to the river, or some secluded lake, to seek their food. They are always seen in pairs, and their consubstantial attachment is said to continue through life.

Here I have observed the white-headed eagles during every month in the year; but, though in my constant rambles I have examined every mountain and valley in that section of the Hudson River valley known as the Highlands, in pursuit of their nests, guided by rumor or vague suppositions, I have always been disappointed and have failed to discover any. This eagle is said to nest almost exclusively upon trees, except in regions where those of a desirable size are not to be found, under which circumstances they have been known to nidificate upon cliffs. This, I think, is the case here, where, in the remote mountain regions, the soil is poor and rocky, and the trees never attain any very considerable size. On the other hand, there are vast, inaccessible ledges of rock, which could not but attract any wild, cliff-nesting species for purposes of nidification.

Unless we accept the above conclusion—that our eagles have in so much departed from their usual habit as to nest upon cliffs instead of on trees—I am convinced that no white-headed eagles breed anywhere in the valley of the Lower Hudson (*Pandion haliaetus*) seldom nests at present. Nevertheless, the fact of the presence of these birds during the season of reproduction strongly favors the supposition that they do nest here. But it is at the time when the ice first breaks up in the Hudson that these splendid birds appear most abundantly. At that season I have myself counted more than twenty-five eagles at once, and I am credibly informed, by a person who resides in the immediate vicinity of their favorite feeding place, that it is no uncommon spectacle to witness an assemblage of not less than fifty eagles, gathered there for the purpose of feeding, very early in the morning in March of certain years.

The place to which they are thus attracted is a large tract of flats and marshy lands, lying between the Cold Spring Foundry and Garrison's Station. This tract occupies what formerly constituted an east channel of the Hudson, as it then divided north of Constitution Island and flowed on either side of it; but the east channel, which was the shallower, has been filled up by an alluvial deposit, so that the river now uses only the deep, west channel, while Constitution Island is separated from the ancient bank of the east channel by a broad belt of meadow land, which has been dyked and ditched, but the efforts to reclaim and cultivate which, have been but partially successful. The alluvial deposit here reaches to a depth of more than sixty feet. There are persons, now living, who have sailed vessels over these meadows. A large flat of shoal water is situated at either end of this marsh, which, being cut off from the river channel by the Hudson River Railroad, which also cuts off two projecting points from the east side of Constitution Island, is called "cove." Each of these coves is supplied by fresh-water streams. The Upper, North or Foundry cove is led by the foundry creek, while the Lower, or Gouverneur's cove is supplied by the large Indian Falls stream, the beautiful falls of which are well known to all residents and tourists who have visited this locality, which empties into it near its upper end; and at the lower end a triple stream empties into a beautiful deep basin at the foot of the falls of the main stream, each of the others being successively less in size, the smallest entirely vanishing in very dry times. Just at this place a large arm of the flat makes up into the land as if to meet the pure waters of the brook. Its banks are high and very rocky, in places precipitous; but, like all parts of this shore, they are clothed with trees which, in the rich, dark soil, grow to an unusual size. Towering hemlock and lofty deciduous trees grow upon the sides with pitch-pines and tall, symmetrical red cedars crowning the summit or maintaining a precarious footing upon the sides of the perpendicular cliffs, while the graceful, drooping branches of the birches and willows shade the waters below.

Now, as is well known, a place where fresh water streams flow into brackish waters is a perfect paradise for certain kinds of fishes, and this place, reader, is certainly not an exception, as you might easily believe could you but see the fishermen hauling their heavy seines to the shore laden with different species of fishes which, however, have to be carefully sorted over, for many of them are unfit for food. Among them are carp, goldfish, suckers and roach, all of which are cast aside to furnish an abundant and agreeable feast to the crows, raccoons and foxes, or else are used for "compost," but the sun fish, white and yellow perch, pickerel, striped bass and a few chub-suckers, and an occasional trout, are all piled carefully into the stern of their skiffs, and are destined for the market.

This, then, is the secret of the great abundance of the white-headed eagles in these coves. Their food consists almost entirely of fishes, and where could they be so easily taken as here? For, when the tide is out, the water becomes very shallow, and the fishes can then be easily seized. These places, therefore, are the natural resorts of all kinds of fish-eating birds—ducks, mergansers, gulls, terns, herons, the osprey, and the noisy king fisher, as well as the eagles, all resort thither in quest of food.

But, reader, if you would see these noble birds in their full native vigor and beauty, you must visit them in their wild haunts. Perhaps you can do no better than to accompany me to-day, for I am all accoutred for the day's shooting, and the special object of pursuit is the white-headed eagle. It is early in March, and the heavy ice of the Hudson has broken loose as far above us as New Hamburg, and now the great masses of ice are moving swiftly with the current, crushing and grinding each other with fearful force and deafening noise, piling up great ice walls upon the flats at the angles of the river's course, while the north winds are howling fiercely.

Are you all ready—warmly dressed, with heavy pea-jacket, and extra overcoat and gloves? All right! Then come along, for the sun will soon be up. We have reached the river, and see! The sun is just rising over grand, homelike, old Sugar Loaf Mountain, and sends the warm sunlight over against the top of Bear Mountain opposite, on the bald summit of which rests a huge boulder, cleft in twain through the middle. Geologists believe that it was deposited there by the huge ice masses that swept this continent ages ago. We view before us, on a very limited scale, an exhibition of the fearful power of those agencies, and are filled with awe to think of the powers which have been. Into the crevice of this boulder is fixed the base of a tall flag-staff, which stands out in sharp relief against the pale blue of the sky. This peak is called "Bald Rock," and is celebrated for the superb view which it affords to mountain climbers.

But how are we going to launch our boat, you ask, when the firm ice reaches quite far out into the stream? It will be a difficult task, but we'll manage it. Now, here goes—out upon the ice, bow first. Now take a close hold of the stern painter. Get her stern gently over the dock. Hold! Look out for that sharp spike, or we'll have a hole in her bot-

tom. Now we are all right! Her keel cuts through the spongy ice, which we must break in front of her bow, then, hauling her forward a little way with the gaff hooks, the ice has to be broken again in the same manner. This breaking the ice is a very tedious process and is accomplished by standing outside the boat upon the ice prepared to support upon one's arms the weight of the body when the ice gives way beneath it. Where the ice is too heavy for this the boat must be dragged along over the sodden mass by main strength, her keel only cutting through.

At last we reach the open water, but only to encounter new difficulties and greater exertions; for, struggling amongst the ice, against both wind and tide, is only easy to those possessing youth and strength and ardent zeal and determination. So we buffet away, always looking out for the open spaces between the great ice fields. There is a nice opening ahead, but when we have reached the spot the ice has again wedged in and filled it up, and we are once more drifting backward before it. See how the ice is grinding against that sharply-projecting, rocky point on shore, breaking off huge pieces and piling them up in a high wall just on the other side.

Herring gulls are flying overhead in small bands, with here and there a larger gathering on the ice, where some lucky one has discovered a bit of food. See them all rise at once on wing in pursuit of that one that has tried, but unsuccessfully, to bolt with the booty; but they do not get it all away from him so, for his stout bill has seized the fish across the middle and he never lets go, submitting, rather to their buffetings till enough has been torn from either end of it to allow him to swallow the remainder, which he does at a gulp and with evident satisfaction. Now they all fly away together. How beautiful they are, with their long, narrow wings; how exquisitely curved, with all below white of the purity of snow, and above, the mantle is of the delicate gull-blue. And how graceful their flight! How strange that such beautiful creatures should be so greedy and gluttonous. Crows are floating upon every ice cake, eagerly searching among the debris for carrion. Nothing eatable is distasteful to their omnivorous maws.

But what is that large creature sitting upon the ice? It is the eagle, and there comes its mate and alights beside it. We may save ourselves the fatigue of going in pursuit, for we should never get near them; besides, we have arrived at the termination of the river expedition near the little boat-house north of the Garrisons tunnel. Now we are fairly landed after a long row; for, though we have done our best, we have not made a mile an hour, and it is now eleven o'clock.

We have not too much time, so we must put on our overcoats and push on to the lower cove, which, I may say, is a better place than the upper one; for it can scarcely be called quiet near the foundry, where they are often trying the heavy Parrott guns; and then, too, they suffer less annoyance from the gunners and workmen than above. So the Gouverneur's cove will be the scene of to-day's exploits. And here it is before us. About one-half of the cove is already clear of ice, and upon the ice, at the edge of the open water, we see several of the eagles sitting, while perched upon the loftiest trees on shore are several others, and a number of them are seen soaring high in the air. Let us not stop to look, but hasten around to the other side, where the two large hemlocks stand, for, on the summit of each tree, I see one of the great birds sitting, perched erect, their snowy-white heads making them conspicuous objects, seen even at this distance. You do not think we can approach them near enough for a shot? I am glad you do not, for that is just what I think, and being agreed in this will save us the time that would otherwise be consumed by a fruitless attempt to stalk them; for, from their lofty perches, they would discover us long before we could creep within gunshot.

(To be Continued.)

THAT OUNNING OLD FOX.—He was afflicted with fleas. Went for the river; walked in slowly; took a mouthful of moss by the way; balanced that moss on the end of his nose. Then he sank in the water. The fleas hived in the moss. He cut loose from the moss, and the fleas floated down stream. A correspondent sends us this. A reliable Tennessee gentleman saw the fox. We read about this same fox when we were ten years old. There was nothing about the reliable Tennessee gentleman. We wouldn't have believed it even then. Another fox was troubled with fleas. He went to the apothecary, paid twenty-five cents for Persian insect powder, borrowed a bellows, dusted himself with the powder—and was happy. Moral: The wicked flea, *Pyrethrum Roscum* does the business.

CHESAPEAKE ZOOLOGICAL LABORATORY.—One of the departments of the John Hopkins University was opened for students at Old Point Comfort, Va., on the 25th of June. A laboratory is especially designed to facilitate the researches of advanced scientific workers, either ladies or gentlemen. Of course, the locality is a particularly good one for collecting marine animals, and students will receive proper help and guidance. The price of board will not exceed \$5 per week, and a fee of \$10 only is charged for the use of the laboratory outfit. For further information, address Mr. H. J. Rice, of the Johns Hopkins University, Baltimore, or to Dr. W. H. Brooks, Old Point Comfort, Va. The following is the list, as far as made out, of the members of the party: Dr. W. K. Brooks, Prof. of Zoology and Com. Anat., Johns Hopkins University; Mrs. W. K. Brooks; Mr. H. J. Rice, Mr. H. Sewell, Dr. Chris Sihler, Fellows in Biology, Johns Hopkins University; Dr. Emil Bassels, Smithsonian Institution, Washington; Prof. L. V. Tuttle, Friends Academy, Baltimore, Md.; Prof. N. B. Webster, Webster Military Academy, Norfolk, Va.; Dr. E. P. Webster, Norfolk, Va.

TRANSPORTATION OF SHELLS.—In the last number of *Nature* Charles Darwin states that in his "Origin of Species" he had suggested various means of transportation, "but as few facts on this head are positively known," he gives the case of a living Unio, which had caught one of the toes of a duck's foot between its valves, and duck and Unio were thus secured. It was Mr. Arlbur H. Gray, of Davenport Mass., who procured this exemplification to Mr. Darwin's surmises. A blue

winged teal (*Querquedula discors*) was shot in September last near Newbery, and to the bird's toe was attached by the valve of the shell a mussel the *Unio complanatus*. The *Unio* was alive and had abraded the skin of the bird's toe. Mr. Gray writes: "It (the *Unio*) would have been transported to some pond or river, perhaps miles from its original home, had the bird not been shot, and might have propagated its kind." That aquatic birds disseminate the spawn of fish in this way: the ova adhering to their feet is quite possible.

SNAKE EAT SNAKE.—Allow me to contribute my personal observation on this subject. If the rattlesnake use its rattles as a love-note I have never observed it, but that they use it as a slogan of war, and to gather the clans to the fray, I have seen; and heard the pibroch sounding, sounding from afar. In the summer of 1859, gun in hand, on a still hunt for squirrels and ticks, I fell in with a negro digging gentian roots. While talking to Sam he disturbed a rattlesnake, which immediately tooted its tail. Sam got a little excited, jumping round a good deal, and striking at the reptile with a hoe, and always managed to keep between the snake and the gun, so that I could not get in a shot. Ere many seconds elapsed, two other rattlesnakes came from other different directions, sounding their battle-cry as they came. Sam cried enough, dropped his hoe, and left. In 1860 I had another experience, in which one answered the call for assistance. Up to 1869 I had met with many of them, and have never known them to spring their rattles unless excited by anger, or within hearing distance of one in trouble, when they would answer and come in haste. At times they are not easily excited. When gorged they will remain undisturbed, apparently unconscious of the presence of the enemy; but let a dog come on the ground, and peace is at an end—it is fight or run. I do not know of anything that will excite them so quickly as a dog, and they seem to smell a dog at a considerable distance. Their food is rats, mice, birds and eggs, young rabbits, squirrels and toads. A rattle for every year is no criterion to judge age by. I have known one instance of two rattles being matured in one year, and I believe if they could be carefully noticed there would be instances of still more. I have seen a snake with three rattles larger in length and girth than one with thirteen rattles, both killed on the same day. Have seen one with seven rattles larger than one with twelve rattles, both killed on the same day. Twenty-eight rattles is the greatest number of rattles I have ever seen on one snake, and it was not as large as some I had seen with a less number of rattles. Of the mortal enmity existing between the black snake and the rattlesnake, two instances have come under my notice, in each of which the rattlesnake proved an arrant coward, making a great noise, while the black snake did all the fighting—if I may call it fighting; it was rather a strangling and a squeezing. My attention was aroused to it by the rattlesnake passing close to me, paying no attention to my presence, but apparently endeavoring to get away from something in pursuit, his rattles springing to their loudest note. I was in the act of throwing gun up to stop him, when the black snake passed like a flash, going five yards to the rattlesnake's one, and the way he seized that rattlesnake by the back of the neck and went round him was something wonderful. This was in 1866; my next experience was in 1868. Neither victors eat the vanquished. I have heard of other instances, and since 1866 I have not killed a black-snake.

My experience with the king snake and the moccasin ran through a course of thirteen years, and in that time I have seen the king snake get outside of the moccasin many times. When the king first seizes his prey he coils around it until they are almost like a ball, turning occasionally and biting the coils of the moccasin. After being some time in the coil he will open out, and if the moccasin shows signs of life it receives another embrace. When life is extinct the king snake stretches out his victim and commences at the head. It takes some time to gorge, especially if the one going inside is about as large as the one crawling outside. THOS. CHALMERS.

Pittsfield, Mass., May 17, 1878.

THE OPOSSUM ONCE MORE.—Editor *Forest and Stream*: In reply to a query by "Tonic," in your issue of April 11, on the "Embryonic Development of the Opossum," let me say that I have hunted and taken many scalps of the opossum, and have heard some absurd theories on the breeding of the varmint—said theories all conjecture—taken from the formation of the sexual organ of the male.

As the hunting season is not the time to answer "Tonic's" query, we must go back into early spring—and just here comes the difficulty. I believe the female lies close concealed during the period of gestation. After some years of careful watching, I have never found the female when carrying embryos. I have found them in many stages of growth in the marsupium or pouch. Have found one with seven young—small, hairless and blind, and apparently not many hours old—fast to the fount of all infantile comfort—the uterus of the mother showing all the marks of having given recent birth, conclusive evidence to me at least that the young were placed in pouch after birth. The opossum, when not hibernating, have no permanent abiding place—here to-day, elsewhere to-morrow, wherever food is most abundant; nocturnal in their habits, and putting up at the first safe retreat on the approach of day. Of five, size of half grown rats, taken from pouch in July and marked in ear, one was captured by myself the following winter, two miles from place of first capture, two were captured by another party, six miles away, and two I never heard of. I have marked many other lots—the contents of different pouches—but never heard about them afterward. There are probably others who have had more time and been more successful in their search, and, as "Tonic" says, let us have it.

THOMAS CHALMERS.

P. S. On April 17, when out trouting, I observed a pair of partridge with a fine brood of chicks. On Wednesday, May 22, on my way home from trout brook, raised a pair of woodcock; female carried off three young hanging to her. The young were well grown, and so heavy the old one could carry them but a short distance.

Having nothing better to do, I am spending a few days tenting on the old shad ground. On Friday of last week, 24th, took twenty-two shad; Saturday P. M., eleven; Monday P. M., eleven. T. C.

Holyoke, Mass., May 28, 1878.

[April 17 is certainly unusually early for young ruffed grouse to be out, but then we all know that this is an "exceptional season." Woodcock have been seen to carry off their young before, but never three at a time, we think.—Ed.]

BREEDING OF THE SNOW-BIRD IN PENNSYLVANIA.—Noticing in a recent issue of your valued paper, reference to the presence of the American goldfinch (*Chrysomitris tristis*) in Connecticut during winter, I thought it might interest you to know that said bird habitually winters in this part of Pennsylvania, although not infrequently the mercury falls to sixteen degrees below zero. They congregate in large flocks, and appear to be as comfortable and cheerful during cold weather as at any other time.

The following may also be interesting, showing how sharply the range or latitude of the habitat of certain birds is marked. I have been an observer of birds since my boyhood—some twenty odd years—but never noticed a snow-bird (*Junco hyemalis*) after warm weather fairly commenced, although they are usually plenty here in winter. Last June, while trout fishing only thirty miles north of this city, I found quite a number of snow-birds, and surmised that they bred in the neighborhood. In fishing near the same locality this season my surmises proved correct, as I found one of their nests, May 2, containing four eggs. Last week, my brother with others visited the same place, and he found no less than three nests. All of them were built on the ground, along old roads, and hidden under a tuft of moss or a moss-covered log, and, with the exception of one, each contained four eggs. The exception contained five eggs, but one of them was covered, or built over, showing that the parents did not propose to feed more than four young ones—perhaps on account of the "stringency" of the times! The rose-breasted grosbeak (*Goniaphea ludovicianae*) which only arrives in our immediate vicinity for a short time early in spring, also nests in the locality referred to above; but thus far I have not been so fortunate as to find a nest.

Williamsport, Pa., June 3, 1878.

[With regard to the winter range of the *Chrysomitris tristis* we would refer our correspondent to a recent issue of *FOREST AND STREAM*, in which it is shown that this species habitually winters as far north as New Hampshire. The note on the breeding of *Junco hyemalis* near Williamsport is interesting, as this is one of the most southerly localities on record for this occurrence.—Ed.]

ARRIVALS AT THE CINCINNATI ZOOLOGICAL GARDEN UP TO JULY 1.—One white pelican, *Pelecanus trachyrhynchus*; one copperhead snake, *Atractodes contortrix*, presented by Messrs. Thrall and Mamford; two American elk, *Cervus canadensis*, born in Garden; two fallow deer, *Dama vulgaris*, born in Garden; two wild cats, *Felis rufa*, presented; three rattlesnakes, *Crotalus durissus*, presented by Dr. Jno. Franke; four ponies, *Equus caballus*, deposited by Mr. Jno. Robinson; one ditto, born in Garden; one orangutan, *Simias satyrus*; one chimpanzee, *Protophytes niger*, deposited by Messrs. Obas, Relche and Bro.; one red deer, *Cervus elaphus*, born in Garden; one black bear, *Ursus Americanus*, presented by Mr. C. Goshell; one pronghorn antelope, *Antilocapra Americana*, presented by Mr. W. H. May; two passenger pigeons, *Ectopistes migratorius*, hatched in Garden; two lined buzzards, *Buteo lineatus*, presented; one black sea lion, *Zalophus gilgipici*, born in Garden; one Texan civet cat, *Basaris astuta*, presented by Mr. B. H. Robb.

THE CHINESE AZALEA.

THERE is no plant cultivated for winter or spring decoration in the greenhouse or conservatory, that will give better returns for a little extra care and attention than the Azalea, and when the varied and gorgeous colors of many of them are taken into consideration we cannot wonder at the admiration expressed and love shown them by the true florist, as he admires his pets and goes into ecstasies over a newly imported variety, or mayhap a seedling of his own, that, in his estimation at least, is better, or richer, or purer than any other variety of the same color. We are led to these remarks by, the other day, with Mr. William Bennett, Florist, Flat-hush, L. I., looking over and comparing with each other the different varieties in his large and interesting collection, and thinking a few notes would be acceptable to our readers we here present them. Much complaint exists among botanists in regard to the hybridization of plants, as causing confusion—breaking up the natural division of plants by crossing the species; but we feel assured that instead of confusing the labors of the botanist it has been the means of more clearly defining these divisions, and has given to the world thousands upon thousands of plants far more beautiful and useful than the types from which they were produced.

The production of new varieties by the artificial crossing of flowers, by which we can blend the best characteristics of each, affords a source of pleasure and interest, to which there are no bounds. Although the art of producing new varieties in this way is of comparatively modern origin, it has now become the acknowledged source of improvement, and the best means for the acquisition of new and improved varieties. For many years florists were content with the old *A. indica alba*, *pupurea*, *Phœnicea* and other varieties of comparatively early introduction; but since the newer varieties discovered by Fortune in China have been obtained a large stride has been made in the production of superior sorts, for many of which we have to thank our Continental nurserymen, who in these, as with the hardy Azalea pontica, have taken the leading position in their cultivation. A most desirable cross or hybrid might be accomplished between the Azalea *indica alba*, which is hardy in Greenwood, and some of these hardy Japanese sorts, such as *A. amœna*, *A. obtusa*, and others. Hybrids between the two latter have been raised in England, and are spoken of as models of elegance and beauty, and exceedingly useful for decorative purposes as well as for cut blooms, the small flowers being much more useful for that purpose than the larger varieties.

In the treatment of established plants it is essential that the

pots should be well drained with broken potsberds or some such material so that the plants may take a full supply of water without the earth becoming sodden and sour. The plants should at all times have a regular supply of water, especially when in flower and while making their growth. It is good policy to keep them in the greenhouse until the weather becomes warm outside that they may ripen their wood thoroughly. They should then be removed to a cool, shady place, or if allowed to receive the mid-day's sun the pots should be plunged in some substance, so as to prevent the roots from becoming injured by the heat of the sun on the pots. The best season for repotting is just as the plants start to grow in spring, or immediately after they have done blooming, and the best soil to use is half and half good peat and virgin loam with a liberal admixture of sharp sand.

With regard to the form of the plants we are not in favor of the modern method of training and tying down of the branches to make exact conical, spherical, or other geometrical forms, but rather after getting the young plant started in the way it should go, a pyramidal form being perhaps the best and most showy, by summer, pinching of the young shoots, removing or keeping in check such gross and rambling branches as are necessary to keep the plant in proper bounds. The Azalea may be forced early, and a succession of flowers had from December to June, if kept in a cool house until wanted for that purpose.

The following are a few of the most distinct of the many good sorts we saw in Mr. Bennett's collection: Bernhard Andreas, deep rose, double; Borsig, probably the best double white; Cedo nulli, dark purple; Charmer, bright Amaranth; Criterion, salmon pink, edged with white; Distinction, salmon edged with white, spotted; Due de Brabant, rosy salmon, large; Duc de Nassau, rosy purple; Flag of Truce, pure white, double; Gein, rich crimson scarlet; Hortense Vervene, pale salmon, large; La Superbe, deep red; Mad. D. Vervene, rose, upper petals purplish; Mad. Van der Cruyssen, rose, deep spot on upper petals; Magnet, rosy salmon, large; Neptune, orange, shaded violet; Princess Mary of Cambridge, deep rose color, fine form; Sigismund Rucker, lilac rose, bordered white; Souvenir du Prince Albert, double, bright rose, white margin; Stella, bright orange scarlet; Roi d'Holland, deep scarlet.

We may also mention that in Mr. Bennett's orchid house may be seen at present the finest lot of *Cypripedium barbatum* and its varieties round New York. *Anthurium Schertzerianum* also (seedling plants) shows larger and more finely colored spathes than we have seen elsewhere.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, sign of suffering, etc.

"PODGERS" AND HIS DOGS AT HOME.

SAN FRANCISCO, June 15, 1878.

EDITOR *FOREST AND STREAM*:

For the article in a recent issue headed "The Dog Carefully Considered," also your editorial notice of the recognition of the labors of Captain John M. Taylor in the cause of the dog, I return hearty thanks in the name of all dogs, especially the half-dozen I own. As I read the article a terrier lay coiled up in my lap, and three others of various breeds lay stretched out at my feet; for know ye that I maintain a little den of my own, that is, my dogs and I are joint owners. It is a little room fourteen feet square, overlooking the back-yard. Its wood-ceiled walls are covered with pictures of yachts, dogs, birds and beasts, with a glass-case for my guns, racks for my rods, shelves for baskets, a chest of drawers for my tools, and, in order to give it a nautical character, it is fitted up with lockers at the side and cushioned two lengths of berths long, so that when my friends drop in to spend an evening they need not drop out until morning. All that is necessary is to turn up the cushions and draw forth from the lockers underneath plenty of blankets, and they are comfortably camped. If I could only give my habitation a little oscillating motion, in imitation of a yacht at anchor, it would be delightful.

Here with my dogs I spend most of my evenings. No feminine rights are recognized, no foothold permitted. You won't find any hairpins, those vestiges of woman creation, on my floor. The dogs understand this, and when an occasional female head is hesitatingly thrust in in quest of information on some domestic point, the dogs all turn their heads lazily toward the intruder, then rolling their eyes up at me and languidly wagging their tails in recognition of being acquainted; but there is an expression of countenance which plainly says, "She has nothing to say around here; she don't run our end of the schooner, does she?" Those dogs know just as well as I do that this is our domain, and they stretch themselves out at full length on the cushions and watch me as I write with a faint wag of their tails in recognition of my favorable mention of them. If I should read this to them they would understand it. A dog and a woman are never insensible to admiration and attention. They both prize it highly, and in one other particular they are alike. They are

the only two specimens of creation that ever turn around and look after those they have passed.

I forgot to mention the remainder of the happy family: four cats, that sleep with the dogs, and as I write Sir Thomas Toroise Shell has coiled himself close under the throat of Bismarck, who refrains from moving for fear of disturbing him. While Madeline Maltese has settled down for a comfortable nap on Prince, a King Charles, two juvenile cats are having a little game of cuff-and-tumble on the floor. Such are my companions this evening—a fitting occasion to read of and write of dogs, eh?

I consider Captain John Taylor a missionary doing good service in the cause of dogs, cultivating a proper appreciation in the public mind for the noble animal, drawing attention to his qualities, and to know him is but to love him.

In the words of the stock sharps, dog stock is coming up. Bench shows have done much to bring the question before the public, and if with no other good results, they bring the dog and his admirers together and create an interest in him.

I have certain theories about dogs. I believe they have many of the characteristics of human beings, they have qualities of head and heart, and are as varied in character and general make up as we are. They are emblems of honesty and integrity. You see them painted on Adams & Co.'s wagons, alongside safes. Did you ever see a man so illustrated? Who ever saw two dogs alike in character and disposition. Each have their distinct qualities and qualifications and peculiarities, and it is interesting to observe the variety in a little family of dogs. You see, now, a litter of puppies a month old. They are so many children, and manifest at an early age peculiarities that they never outgrow. For instance, among a litter of King Charles, I observed that one, when only about one month old, used one fore-paw in a peculiar manner. He would raise it, hold it poised a second, strike with it, when in a playful mood, then put it down with an emphasis. I soon taught him to put his paw on his nose, and now whenever he is addressed he sits up, eyes the party, and puts his paws on his nose in a most comical manner; but the paw is raised and put down precisely with the same emotion as when a puppy.

I could write innumerable instances in my experience of the variety of character and disposition of dogs, for I have owned many, and in every variety, except, perhaps, Dinmonts and Dachshunds, neither of which do I pine for, as specimens of beauty, for uglier little wretches never were born.

I confess to a weakness for Gordon setters. I had the first ever imported here, and carried the stock along for sixteen years, and when it ran out I called our old friend, Horace Smith, to aid me in renewing it, and he sent me a noble pair—Jeff and Fly. Both have gone to the happy hunting grounds, but left behind some worthy sons and daughters.

I am acquainted with a great many dogs around town, and when I meet them we exchange civilities, and it is amusing to note the matter-of-fact way in which they receive your salutation, but always returning it with promptness. I was going down town in a horse car the other day when espying a favorite dog of my acquaintance in the street, I put my head out of the window, and remarked, "How are you, Dash?" The dog looked around, and catching sight of me, sprang on the platform, rushed into the car and greeted me, went out again by the front door, which was open, much to the consternation of two or three old anti-dog parties. When he reached the street he turned about, and, looking at me, laughed as plainly as human being could, and Dash and I had a little laugh together.

Now the uncultivated mind on the dog would have seen nothing in it but the erratic and senseless caper of a dog, but there was as much point and method in it as if he had been human. Dash enjoyed the consternation he created, and he did it for fun, and he and I enjoyed it together. He knew I would understand it. With such proper appreciation of dog character, what an infinite fund of observation interest and amusement they afford. When I walk out with my dogs of a Sunday when the poundman is at his devotions, I have lots of amusement at their capers, and the bits of fun they have nishing at some little dog, frightening him half out of his wits. They enjoy his fright and laugh as heartily as I do. After running a poor little wretch to his gate, or nearly upsetting some gouty old party by running against him, they come back to me, look up in my face to see if I noticed it and enjoyed it as they did.

There is an understanding and bond of sympathy between us, and we carry on conversations which are clear to us as if they spoke the English language. There are some theories and propositions in Dr. Hadden's suggestion of a method of keeping the dog at home that is open to objections. The dog, himself would object undoubtedly, and it would be a little rough on him.

PODGERS.

PEDIGREE, LAVERACKS AND LLEWELLINS.—We publish with great pleasure the following from Mr. John R. Robinson. It is well known that Mr. Robinson was as familiar as any man in England with the Laverack dogs, and his letter will no doubt be read with interest:

EDITOR FOREST AND STREAM:

In your journal just to hand I notice Mr. C. N. Whitman's account of the pure Laverack setter Pedigree, and beg most respectfully to inform Mr. C. N. W. and your readers that I bred Pedigree and his sisters Magnet and Fairy II. They were born May 16, 1875, out of my Blue Daisy, by Bagley's Victor (lemon and white); Daisy by Prince, Blue Cora; the latter as well as Victor were by old Dash out of Moll. It is true that my old friend, E. Laverack, supplied Mr. Westcott with Pedigree and Magnet, and Mr. Tasker with Fairy II, but it is equally true that I both bred them and raised them. I am glad to learn that they are alive and have proved Mr. L.'s words true, namely, that they "would do me credit as the breeder." I was surprised and sorry to see such a bitter outcry against Mr. Lort's judgment at the late New York Bench Show. I do not always endorse Mr. Lort's awards, but I cannot believe that he could make such a mess as your correspondent would have us believe. In the first place there are few better judges than he, and I find that his awards were in favor of the Laverack, which always have held their own against all comers. In fact it is generally admitted that they are unequalled, and that no setter without Laverack blood is worth "a rush." I have seen Mr. Llewellyn's "cross-breeds," and I admit that some are very handsome, but all fall short of a good pure specimen of the Laverack, such as H. Raymond's Fairy and my late friend's Cora (notwithstanding that the latter was defeated once at the Crystal Palace). I don't write from any bias. I know Mr. Llewellyn personally, and respect him highly and like his dogs, but I like the "pure breed" better. The "Llewellyns," as they are termed, are a cross between the "Laverack" and M. Statter's, and it is well known that the more Laverack blood you have the handsomer and better are the animal. In fact, all the celebrated setters

have more or less Laverack blood in them. You may cross other breeds as you like, but you cannot obtain the same results. As to their being small, Mr. Laverack always preferred small or medium sized dogs for "practical utility," being the quickest and most durable even when of the same blood. As an instance of this, when Mr. Laverack and I shot over Pride of the Border and Fairy, Pride had no chance with her, and I am convinced that if Mr. Westcott's Magnet (although she was badly reared and was for a time foundered) was matched against some big dogs, say for two or three weeks, that she would make them look very "small" long before the time was up. Of course there always will be differences of opinion about setters as about other matters, but being a Laverack fancier, and also having promised my much lamented friend, E. Laverack, on his death bed to maintain his breed of setters pure and propagate them, it is natural that I should say a word in their defence, although they are able to take care of themselves.

JOHN R. ROBINSON.
Glenvilla, Ashbrook, Sunderland, Eng., June 18, 1878.

CANINE ABERRATION.—The case of a setter dog in Boston, under date of June 26, sent us by a correspondent, is so curious as pointing to lunacy in the animal, that we have thought it worth while to publish the letter with our answer. Our correspondent writes:

"I have an English setter dog fifteen months of age. He is a very gentle dog, obedient, well broken and very affectionate, but of rather a timid disposition. Within the last month a habit has greatly increased which he has always had in a slight degree, namely: gazing with a fixed stare at imaginary things in the air while in the house. As a pup he used to often gaze fixedly at my cigar smoke, evidently with fright. He has had the run of the house, and is used to all the rooms. Within the last two weeks this habit has increased greatly, and he now will not lie in any open part of the room, but gets under the table or piano, and, when made to "down charge" in the middle of any room, fixes his eyes on the ceiling or vacancy with a steady stare and retreats, if he is allowed, to the protection of the table or piano. If made to remain in the centre of the room he slightly shivers and seems to see frightful visions in the air. His limbs are in good order, his coat is fine and smooth, and he seems lively and playful outdoors. Has always had this habit in a small degree, but it is now intensified and he evidently is suffering. He is at the present writing in my office and wants to get under my desk, seeing all sorts of visions, apparently, in the air. Has good appetite, and, when he will forget for a moment to watch the ceiling, seems to be himself perfectly, but most of his time is taken up in star gazing. He acts as if he had been badly frightened by something dropping upon him from the air. Can you prescribe for him? Are the symptoms dangerous?" D. F.

The dog is doubtless suffering from some cerebral irritation, and, as it has existed since youth, more or less, it is not probable that a cure can be effected. He might be treated for worms to make sure that he had none, as they often create sympathetic irritation of the brain. Light diet and plenty of exercise will be in order. The dog should be carefully watched, and if the nervous symptoms increase very decidedly he should be tied up or killed. Nervous symptoms in the dog are often very serious.

THE OLD TUMP COON.—A coon hunt by moonlight is not so poor a sport as one might judge at first from a strictly Nimrod point of view; and I confess, for one, that whenever I start down the Potomac after canvas-back and red-head ducks, I almost hope that we will not get any at first, because ill-luck in that line always brings forth an enterprising expedition after coon. And then it makes the darkies so rapturously happy!

We start out about nine o'clock on a fine moonlight night, ten or twelve dogs, darkies of all sizes and ages, lightwood knots to make torches with, tobacco, pipes, cigars, blankets to bivouac with, etc., etc. And what can be finer than the sombre forest vaguely illumined by the pale orb of night, the long shadows below, the glimmering, jagged mass of trees above, and then the wild, weird, unearthly effect when the dark awakens with ten thousand echoes, and the motley chase goes tearing through the woodland. At last the dogs "tree" the quarry, and the blazing torches throw a lurid glare upon gnarled oaks and giant gum trees, the wild-looking figures of our dusky sportsmen, and their half savage cries of encouragement and delight resound in chorus to the mad yelping of the dogs. My friend Frank L., of Washington, is a rare sportsman, and it was with peculiar pleasure that I met him last Wednesday at the Imperial Hotel, and after one of the luxuriant dinners, such as are served in that establishment, proceeded by steamer down the river to the "Crow's Nest"—a noted ducking point. But the weather became so mild that not a duck could be seen, at which our sable gamekeeper grinned; and as he went out to make our improvised dinner he chanted a favorite refrain:

"Possum up de gum tree,
Coony in de boiler."

In the immense timbered lowlands below the "Crow's Nest" there is a vast swampy forest called the Tump, why so called no fellow can tell, but it is; and in there are thousands of giant owls that make night hideous with their whoop. But the principal and oldest inhabitant is the old Tump coon, who was supposed to have caught more geese and rabbits, ducks and chickens, than any old housewife in the neighborhood could count.

He had been treed and shaken out about two hundred times, and had as often whipped all the dogs, until every coon dog in the country knew the trail of the old pirate and was supposed to leave it almost as soon as struck. Nevertheless, last Wednesday night, with about twenty well picked cur dogs and as many darkies, we brought this celebrated coon to bay, or rather to tree; then the giant old dog was felled, the darkies taking turns, two at a time, and as it went down with a crash everything rushed in, and sure enough, there he was with his tail set against the thickest of the branches, his two eyes gleaming like fire balls and his teeth grinning. In went six of the dogs with a desperate dash, but came out yelping and with their tails tucked. Then in we all went, helter skelter, and this time the coon ran for it; but before we could get up with him, he had gotten into a pool of water, and that is the very best military position a coon can assume, his flanks and rear being both protected. So everybody said, "Pshaw, it's no use trying; that there coon can whip all creation now, and it's only just wasting dog and fight to try him." But one of our party, Ryland Ruff, the society swell of Washington, and lightest in the dance, had become excited, and before anybody could catch him, he had taken the coon in the rear by

water; there was a wild screeching and tearing and splashing, and then Ryland, bleeding but victorious, brought out the old Tump Coon dead.

P. McC.

How a Big Dog Dog a Hole for a Little Doo.—I have frequently read in your paper accounts of the wonderful doings of dogs. People call it "instinct." They can call it instinct if they like, but if it be not reason such as mankind is endowed with, it certainly is good dog reasoning; so I wish to add another instance to the many already placed on record. Here is my story—true, every word of it. I am the fortunate possessor of two fine setter pups, one eleven and the other three months old. I keep these youngsters in a yard adjoining my residence, which is surrounded by a fence high enough to keep them in bounds. A partition line of fence between me and a neighbor is of boards on end. This has been an unusually wet spring, and the rains have moistened and softened the ordinarily dry and hard ground. About a week ago, on going home, I discovered the older of my pups digging a hole under this line fence. I watched him for a time, when he ceased digging and stepped back to the younger chap, who was lying a few feet away, apparently much interested in the work of his older companion, when they put their heads together and appeared to have a little dog confab. Then the little fellow went up and tried to get through the hole into the next yard. The hole was too small, and he couldn't make it. He then backed off to his former position, and the older fellow set to work again to enlarge the hole, which he did in a few minutes, and the other passed through. Glad the dog dug the hole in order to free himself I should have thought nothing more of it, further than a demonstration of puppyish devilry; but as he did it evidently to liberate his mate, I cannot but think there must have been a mutual understanding between them. I will just add that our spring shooting was not very good. The early spring spoiled it. The promise for fall shooting is most encouraging. Large numbers of geese and duck nesting here, and the valleys and mountains are alive with the different varieties of grouse.

K.
Virginia City, Montana, June, 1878.

BEAR DOGS.—In another column will be found additional information in regard to bear dogs, the testimony of an experienced bear hunter as to the best breed of bear dogs as used in the Sunflower (Miss.) River bear country.

NAMES CLAIMED.—Mr. W. Moore, of Bloomfield, N. J., claims the name of McGregor for his black, white and tan puppy, 3 months old, out of Champion Roh Roy, Llewellyn bitch Bess. Bess by Burginthal's Rake and L. H. Smith's Fanny. Fanny by Leicester-Dart, etc.—June 26, 1878.

Piper Hidesick Kennel—Grand View, N. Y.—I name my three puppies Victor, Nellie and Mamie Mott. Whelped May 1st, 1878, out of Mrs. Victor M. Hackley's Imp. Nell and Russian Lin.

JOHN Q. OSBORN.

POISONED.—Mr. I. Haggart informed us that last week his fine bitch Bonnet Carree was poisoned.

DEATH OF SHOT—Erie, Pa., June 22.—Graham's old Irish setter dog Shot died on Wednesday at the age of sixteen years. He was one of the very best dogs in this part of the State, and continued to do good work until he was fifteen years of age.

SNIFE.

VISITS—A. E. Godeffroy, Neversink Lodge Kennels—New York, June 25.—Queen—liver and white pointer—formerly Sherwood's, bred to Sensation.

YACHTING NEWS.

NEW YORK BAY REGATTA.—On the morning of the 27th Inst. the greatest collection of small yachts ever witnessed in New York waters had assembled about Bay Ridge, L. I. The fleet numbered upward of 150 boats of all sizes, from *Tidal Wave* and *Comet* down to the sixteen-foot cat-boat. The entries for the First Annual N. Y. Bay Regatta had been very numerous, and the success and smoothness with which the event passed off will insure an immense assemblage of similar craft next year. Much praise is due the committee and the secretary thereof, Mr. Robbins, for the admirable manner in which the whole programme was carried out. Classes, course and prizes have been fully entered upon in our previous numbers. Forty-three out of forty-seven entered came to the line with racing numbers on their mainsails, and among them were the cracks of the small fry from far and near. The famous *W. R. Brown*, of Newburg, was again in charge of Capt. Ira Smith, and Suedicor had his love, the *Nettle*, with the usual picked crew and a mountain of sand-bags. In fact, during the earlier part of the race, she was too deep in water, but later on, when the wind freshened up, his pile of weight came in good stead. Joe Morris was at the tiller of *Thistle*, sister to *Nella*. Both these flyers have handsome and able looking lines, rather a full round bilge and more sheer than others of their type, and the way they stand up to their canvas shows the value of their models. Ellsworth tool the *Meteor*, that good old-timer, with none of the speed out of her yet, while *Josephine* and *Fowler* were two new boats, from whom great things were expected. *Dare Devil* was handled by Jake Schmidt, her builder, and between her, *Meteor* and the *Brown* a close match was looked for. In the third class *Addie Taylor* and *Excelsior* were the favorites, while among the cats *Emma D.* from the Harlem, was thought to have the best chance. The class for catamarans included three, *Tarantella* and *Minnie* and *Bella* being the

only two properly matched as to size, the *Deception* being too small to amount to much, and looking altogether like a home-made affair. This race afforded the first official match between catamarans and the ordinary sloop, and the ready style in which Mr. Hughes ran through the entire fleet as though they were at anchor, with only one hand on board besides himself, and not a single sand bag nor a racing sail, will settle forever the question as to their speed on or off the wind. When it is remembered that the first class jib and mainsails required about fifteen hands apiece and extra suits of racing sails, sand-bags, etc., the superiority in point of economy of the double-hull craft becomes so apparent that we should not wonder if in time the catamaran entirely displaced the open jib-and-mainsail for racing purposes. The starting gun went from the steamer *Fort Lee* at 11h. 47m. 40s. Wind, a wholesale breeze from S. S. E., and the tide three-quarters ebb. The yachts were sent across the line in the following order, with hooms to starboard:

First Class—W. R. Brown, William Swarc, Dare Devil, Josephine, Meteor, Journeyman, N. R. Fowler, Annie Geissel and Florence.

Second Class—No Name, Clara S., Inspector, Martha N., Mary, Fanuie D., Jenny Dilks, Nettle, Thistle and L. P. Springer.

Third Class—Marvel, George B., Deane, Sophia Emma, Willie, Addie Taylor, Excelsior, Joe Saunders, Lydia F. and Faith.

Fourth Class—Ida M., E. Warren, Emma D., Comanche, Brothers, Mary D., Clara W., May B., Gussie, Alice, Cora D. and Fidget.

Catamarans—Minnie and Bella, *Deception* and *Tarantella*. The whole fleet stood for the Robbins Reef buoy, rounded and commenced a series of short and long legs down to the Narrows. Below Stapleton the catamaran *Minnie* and *Bella* had already left the fleet under her stern, and with the freshening breeze, was rapidly spinning out her lead. A nuisance of the sand-bag affliction, under which our small racing craft suffer, was repeatedly illustrated to-day. Owing to the numerous entries blanketing was taken and given without stint on the run to Robbins Reef, and when one sloop would take the wind out of another's sail the latter, with all her sand-bags on the weather rail, would dip to windward with a sudden lurch and threaten to capsize. The whole fleet fetched into Stapleton Bay, tacked once again, and then went through the Narrows. *Tarantella* had in the meantime been overhauling all the sand-bag devices excepting the three leaders, and after a couple of hoards outside, laid up for stake-boat off Coney Island. *Minnie* and *Bella* rounded the upper mark first, eased sheets, and was off for home with a lead of nearly a mile. She was followed by the others as below:

Name	H. M. S.	Name	H. M. S.
Minnie and Bella	12 47 30	Martha M.	1 03 30
W. R. Brown	12 55 05	N. R. Fowler	1 04 15
Tarantella	12 53 00	Nettle	1 04 45
Meteor	12 59 00	Jenny Dilks	1 05 05
Dare Devil	12 59 30	Journeyman	1 06 30
No Name	1 20 20	Clara S.	1 07 10
Josephine	1 02 55		

The cat-boats turned a stake-boat off Owls Head instead. Approaching the Coney Island mark *Brown* led the sloops, with *Meteor* and *Dare Devil* close together and *Tarantella* a little astern. She rapidly ran through their lee, and jibed round the mark without the least aid, though the wind was now quite fresh, and beyond Fort Lafayette went to the front of all excepting Roahr's double-buller. The *Brown* dropped a man overboard, but picked him up and kept off again, still leading the sloops, with *Meteor* close aboard and *Dare Devil* third. The fourth class had finished the first round as follows: Brothers, Comanche, Alice, Clara W., E. Warren, Emma D., Mary D., Fidget, Cora D., Gussie, Ida M., May B. On the second round *Tarantella* picked up on her sister and went by her below the Narrows and led the fleet by a long distance, which she increased up to the last. *Brown*, *Meteor* and *Dare Devil* held well together until they got outside for the second time, the former being to windward. They all made a long leg through the Narrows, the Newburgh boat standing down along the Staten Island shore and apparently holding a better wind than the rest. When they all tacked for the outer mark the *Brown* was the only one who could fetch it, and rounded with a long lead. *Dare Devil* next, baving outweathered *Meteor*, the latter rounding 6m. 50s. later. Booming out was again in order, and all hands made for home with hooms over the port quarter. The finish was reached as under:

FIRST CLASS—TWENTY-SIX TO THIRTY FEET.

Name	Start	Finish	Elapsed time	Corrected time
Journeyman	11 49 46	4 17 45	4 17 59	4 17 59
Meteor	11 49 53	3 56 49	4 7 17	4 6 47
Annie Geissel	11 51 30	Withdrawn

CATAMARANS.

Minnie and Bella	11 48 25	3 24 05	3 35 40	3 34 55
Tarantella	11 50 45	3 18 05	3 27 21	3 27 21
Deception	11 50 40	Passed on wrong side stake-boat.		

The *Brown* takes first prize and *Dare Devil* second. *Nettle* was first home in the second class, but having fouled a stake-

boat was protested against by *No Name*, second boat in. *Addie Taylor* takes first prize in third class, and *G. B. Deane*, the second. In the fourth class *Brothers* takes first and *Fidget* second prize, while among the catamarans *Tarantella* beats Roahr's boat *Minnie* and *Bella* 7m. 34s. The judges will give their decision concerning protest against *Nettle* in a few days.

EASTERN YACHT CLUB.—The Eastern Yacht club sailed their annual regatta over a 28-mile course, June 27. Yachts were divided into two classes for schooners and two for sloops. Start flying, as follows:

Name	H. M. S.	Name	H. M. S.
Whitcap	11 51 43	Enterprise	12 03 31
Shadow	11 54 34	M. deap	12 05 00
Foam	11 58 10	Breeze	12 05 00
Haleyon	11 59 10	Dream	12 05 00
Anna	12 01 12		

Wind light from E. S. E. and light sails came into requisition. *Haleyon* headed *Foam* when nearly abreast of Pig Rocks, and won readily in her class. *Madcap*, well known to our Metropolitan waters as a very fast craft, and built by Abertson, of Philadelphia, had a brush with the cutter-sloop *Enterprise*, and dropped her. Report says Mr. Peabody's yacht was kept too close, and that she would have done better if given more of a full. She out-pointed *Madcap* and held her own off the wind; it was only when on the wind that *Madcap* out-footed her. About half way over the course the wind backed round to S. W. and came out stronger. *Dream*, *Breeze*, and *Shadow* gave up, and *Anna* had it all to herself among the second class schooners, and *Whitcap*, formerly Mr. Livingston's famous boat, had a walk-over in the second class for sloops. Actual and corrected time as follows:

FIRST CLASS SCHOONERS—PRIZE \$200.

Name	Owner	Length	H. M. S.	Cor. time
Haleyon	George H. Brooks	79.35	4 19 35	
Foam	F. D. Boardman	79	4 24 50	

SECOND CLASS SCHOONERS.

Anna	David Pingree	48	5 57 41	
Dream	G. S. Curtis	43		
Breeze	J. G. Minot	43		

FIRST CLASS SLOOPS.

Madcap	W. C. Cabot	42	4 58 13	
Enterprise	F. E. Peabody	43	5 01 14	

SECOND CLASS SLOOPS.

Whitcap	J. M. Forbica	35	5 11 32	
Shadow	John Bryant	33.5		

Madcap, which a few years ago showed our British cousins that they did not know how to build a fast yacht, by smartly beating the English crack *Cambria* several miles out of twenty-five, went over the course with the racers and showed them some of her old time tricks in speed and weatherliness.

LANDMARK GOING.—Fifteen years ago the Brooklyn Yacht Club erected their present quarters at the foot of Court st., since which time their well-known house has become a regular landmark to all visitors to Gowanus Bay. But the world moves and so did the hulkhead in front of the piazza. What with filling in and the piers recently built, the club has decided to vacate for other scenes, where the view will not be impaired again. It is intended to build a new house at Bay Ridge next winter. In the mean time a house will be leased from Mr. J. T. Smith in the vicinity of the present one.

NOVA SCOTIA YACHT SQUADRON.—The yachting season in Halifax was formally opened on Saturday, 15th June, by the first cruise of the squadron, Bedford being the objective point. The following yachts rendezvoused at H. M. Lumber Yard at 2:30 P. M. Steamer, *Carrie*; schooners, *Albatross*, *Sea Foam*; sloops, *Mystery*, *Hebe*, *Psyche*, *Circe*, *Spray*, *Lily*, *Edith*, *Squirrel*, *Muta*; cat, *Bertha*. Rear-Commodore J. W. Stairs hoisted his flag on board the *Mystery*, and having allotted the yachts their stations, signalled D. R.—“Form into a line astern of me”—and led the way up the harbor. The breeze was light from S. W., and a prettier marine picture could not be seen than that formed by the yachts of the squadron as they swept on, covered with canvas and burgees, and ensigns flying. On passing H. M. S. *Bellerophon*, flagship of Vice-Admiral Sir E. A. Inglefield, K. O. B., the yachts saluted, the salute being returned by the flagship. The Rear-Commodore then signalled D. N.—“Form line abreast of me to starboard and heave to.” Up went the answering pendants as the yachts dashed into their appointed places, waiting for the next signal, which proved to be H. L.—“Yachts are to race to mark next shown and heave to”—and was followed by B. H. J.—“Bedford Narrows.” Gun fire sent the fleet off full speed, the flagship waiting till all had fairly started before drawing her jib sheet. The *Mystery* overtook the fleet, hove to at Bedford Narrows and led in to the anchorage, signalling B. H.—“Anchor as most convenient.” Splash went the mud-hooks, and every man went ashore to Neuch's Hotel, where dinner had been prepared. Some fifty or sixty gentlemen sat down, and a very pleasant time was spent. The return trip was effected under sail by some yachts, in tow of the steamer by others, and a highly successful opening trip was over. A brilliant but an almost windless day proved a bar to fine racing on Friday, 21st June, when the squadron sailed their opening race. The wind died away before the race was completed, and throughout the last round was exceedingly paltry. Mr. Butler's sloop *Hebe* carried off the honors, and Mr. D. Cronan's handsome schooner distanced them all and landed the second prize easily. Mr. Cronan's victory gave universal satisfaction. Rear-Commodore Stairs had charge of the race. The following yachts passed the line:

Yacht	Entered by	Tons	H. M. S.
Albatross (schr)	D. Cronan	17	2 22 00
Hebe (sloop)	J. E. Butler	8	2 23 01
Lily (sloop)	Dr. W. H. Weeks	5	2 22 50
Psyche (sloop)	Lieut. G. E. Capel Cure, 20th	7	2 23 15
Circe (sloop)	James Fraser	5	2 23 35
Edith (sloop)	W. Alkinson	6	2 21 05
Sea Foam (schr)	Lieut. Ord, R. E.	27	2 25 15
Mystery (sloop)	Smithurst and Troop	14	2 25 18
Spray (sloop)	H. St. G. Twining	12	2 25 55

The sloops carried mainbooms to port and set spinnakers to starboard, all carried gaff topsails. The schooners winged out, and should have had square sails. *Spray* carried away her squaresail halyard block almost at the start, the sail came down by the run. Running to the Perry buoy the *Hebe*, *Albatross* and *Circe* led, and rounded in that order; jibing being the order of the day, *Mystery*, *Spray* and *Sea Foam* brought up the rear, but picked up on the reach across, when the *Circe*, by a clever manoeuvre, cut out the *Hebe* and took the lead. It was now a beat down to Fort Clarence. *Hebe*, *Circe* and *Albatross* stood over to the Eastern shore, followed by the *Sea Foam*, the *Mystery* and *Psyche*, the latter far ahead and close in with the leaders. The *Hebe* regained her lead, and the *Mystery* closed on the leaders. The flag-boat off Fort Clarence was rounded as follows: *Hebe*, 3h. 34m.; *Psyche*, 3h. 44m.; *Albatross*, 3h. 45m. 3s.; *Circe*, 3h. 46m. 20s.; *Mystery*, 3h. 51m. 30s.; Jibtopsails and spinnakers were again called

into requisition for the reach to Leopard buoy. *Mystery* jibed round the Leopard ahead of the *Lily* and began working up to the *Psyche* and *Circe*, crossing the bows of the former off the southern end of George's Island. She and the *Circe* then held on for Fort Clarence, dropping the *Psyche*, *Spray* and *Lily*, the *Sea Foam* having given up, and the *Psyche* shortly after doing the same. Meanwhile the *Hebe* and *Albatross* were away ahead, and bar accidents, had first and second prize safe. The racing was now between the four yachts astern, and on the reach to Commissioners' Point the *Mystery* went right past *Circe*, and rounded the buoy first, followed by the *Circe*, the *Spray* and the *Lily*. *Circe* then gave up. *Hebe* by this time had won, and the *Albatross* was crossing the line. *Hebe* was timed at the finishing line at 5h. 14m. 25s., and the *Albatross* at 5h. 26m. 20s. The *Mystery* did not get across till over an hour later. The next race will be sailed over the Bedford Basin Course on Saturday, July 13.

SOUTHWARK REGATTA.—First and third class boats of the Southwark and Philadelphia Yacht clubs sailed their regular regatta June 24, from Philadelphia to Chester and return. *Mitchell* and *Spurt* were the first home in the first class, followed by *Schuyler*, *Powell* and *Ledyard* in the third class.

SOUTHERN YACHT CLUB.—This newly organized club held their first annual regatta June 24 and 25. Crews were limited to amateurs the first day, with the following results: First-class, *Nathalie C.*; time, 2h. 58m. 30s. Second-class, *Xiphias*; time, 3h. 27m. 58s. Third-class, *Juniata*; time, 3h. 31m. 14s. The *Maggie* capsized. Fourth-class, *Olieta*; time, 4h. 4m. 39s.

PROVIDENCE YACHT CLUB.—In the race, June 25, for the Harvey J. Flint cup, the *Peck* and *Dixon* again won in a strong breeze. *Wanderer*, *Sunshine* and *Lizette* came to grief, and *Windward* failed to put in an appearance on account of lacking shifting ballast.

ADDIE TAYLOR AND H. H. HOLMES.—These two yachts, which failed to make a race some time ago, were started again June 25. *Holmes* had her board slightly altered and donned the racing rig of *Clara S.* Ira Smith had charge of the *Addie*. Double reefs were taken down, the wind blowing fresh from the N. W., and Mr. Taylor's boat carried whole jib, while ex-Com. Kreimeyer had a reef in his. After a number of knock-downs, the *Taylor* reached the outer mark and tacked around, but Schmidt in the *Holmes* lowered away jib and prepared to jibe. A gust struck the sloop and over she went. All hands were rescued by small boats from the hospital ship *Winona*, and the yacht righted and towed home. The *Taylor* made good weather of it, and reached the finish, off Greenville, N. J., in 3h. 20m. 50s. from the start. The stakes of \$500 went to her.

YACHTING LIBRARIES.—The attention of yachting, boating and canoeing men is called to our hook reviews of recent numbers. They will find in that column notices of many seasonable books which should find a place in the literary locker of amateur skippers.

HAVERHILL YACHT CLUB.—The club squadron starts on a cruise to the southward July 4, and will be gone one week. Will not other clubs owning small yachts follow this excellent example.

COMET-PEERLESS MATCH.—*Peerless* will not hold the Bennett challenge cup unmolested for any length of time, if any thing is to come of Mr. Langley's proposition to match his *Comet* against the present holder. The proposed race will probably be sailed in the latter part of July, the *Peerless* showing 30 days' rest to the winner. Capt. Joe. Ellisworth will tiller *Comet* probably, while *Peerless* will stick to Corinthian principles, and her owner will tool her himself.

CAROLINA YACHT CLUB.—The Wilmington, N. C., yachtsmen held their regular annual regatta June 25; course, Market Dock to Dram Tree buoy and return, twice round, distance eight miles; start flying. Six yachts entered: *Frolic*, *Bonnie Lassie*, *Rosa*, *Retta*, *Ripple*, *Foam*. Wind fresh from S. W. *Frolic* went across the line first, followed by the *Lassie* and *Rosa*. On the run down *Frolic*, *Ripple*, *Foam* and *Bonnie Lassie* kept well together, the lower mark being rounded by *Rosa* first, *Frolic* second and *Ripple* third. The run back was with the wind aft. *Ripple* set square sail and *Frolic* drenched her canvas. *Rosa* retained her lead, and started over the course the second time, with *Ripple* second and *Frolic* third. At the lower buoy *Foam* had outrun *Frolic*, otherwise the order remained the same. The final was made as follows, *Retta* having given up: *Rosa*, 2h. 18m. 13s.; *Ripple*, 2h. 36m. 31s.; *Foam*, 2h. 37m. 10s.; *Frolic*, 2h. 46m. 57s.; *Bonnie Lassie*, 2h. 52m. 11s. *Rosa* takes the prize. This is the second race of the club this year.

CHICAGO YACHT CLUB.—The regular annual regatta of this club was held June 22. Course from Van Buren st., around stakeboat off Thirty-ninth st., thence around the Crib and to a stakeboat off Diversey st., and back to start. Entries as follows: *Ina*, *Cora*, *Cary*, *Enterprise*, *Mamie*, *Miller*, *Lucy*, *Unknown*. *Ina* and *Cora* were the two cracks of the day. *Ina* was built from lines by McGiehan, and *Cora* was built by the same party for the late Com. K. O. Barker, of Detroit. *Cora* won in her class in 3h. 1m. 32s.; *Ina* in the second, 3h. 25m. 45s.; *Miller* in the third-class, 3h. 56m. 20s.; and *Cary* in the fourth class in 4h.

NAHASSET YACHT CLUB.—Boston, June 28.—This club is starting on its third year with fifty members and forty small yachts. There will be three regular regattas. One, open to all comers, at Nahant, the other two at Cohasset. The members are nearly all Corinthian yachtsmen. P. G.

YACHTING ON THE LAKES—Belleville, June 22.—There is probably no other boat of her size in these waters which is superior in speed to the *Katie*, which recently defeated the *Surprise*, unless it be the *Kathleen*, of our local fleet, which remains to be seen, and probably the meeting of the boats in the Kingston Regatta on Dominion Day (July 1) will decide. At Toronto the yachting season promises to be lively, though there is nothing speedy now at the Provincial capital, except the schooner *Oriole*. The fastest of the Toronto second class fleet is the *Resolute*, a two tonner owned here, but which was too slow to be better than fourth in any race when competing with our local fleet, and the *Surprise* of Trenton. A match is talked of between the schooners *Oriole*, of Toronto, and *Countess of Dufferin*, the big representative of Canada, which raced with the *Madeleine* at New York. Mr. Wm. Pike, of this place, has built a handsome and finely modeled standing keel yacht of ten tons measurement, which he proposes launching a few days hence. Frank M. Roy has also built a ten ton centreboarder, which will be beautifully fitted up, and will probably be launched in September. She will be called the *Gracie*, and will be heard of in our races hereafter, as her model is much admired by good judges. PORT TACOK.

BY ALL MEANS.—We understand that Mr. Ross Wynns proposes taking his clipper sloop *Arrow* to Europe next summer and matching her against the English cutters. Nothing could be more interesting or instructive. Two things occur to us in this connection. In the first place Mr. Wynns will find difficulty in entering public races on account of English conservatism prohibiting the use of a centre-board, so that he may have to seek a series of private matches with such owners as are progressive enough to be willing to give the American sloop a fair trial on her merits. Second, Mr. Wynns will find it hard to arrange the time allowance question, the Thames Rule holding out such unjust advantage to the deep cutters that Englishmen will not be over-ready to adopt a fairer system for the accommodation of a visitor. Simple length measurement may afford a solution. Finally, we hope Mr. Wynns will not rest content with one or a few races, but will match his yacht under all conditions and as often as he can. Only upon the results of a large number of races can correct deductions be based concerning the question of beam vs ballast. *Arrow* measures 66½ tons O. M., is 65.7 ft. over all, 61.5 ft. on water-line, 26.3 ft. extreme beam, 6 ft. hold, and 5.5 ft. water, without board. She was built by D. Kirby, and hails from Newport, R. I.

LAKE YACHTING.—*Trenton*, June 28.—The yacht *Annie Outhbert*, which has carried the champion flag for some time, has been sold to Capt. J. Prinderville, of Chicago, for \$1,800. The Governor-General of the Dominion of Canada will give a silver medal for competition among Brockville yachts only, to be sailed for this season. The Trenton Annual Regatta, on the 28th of June, proved very successful. In the second class race there were three entries. Won by the *Katie Gray*, of Belleville, the *Surprise*, of Trenton being second, and the *Martin*, of Kingston, third. In the third class there were seven entries, the *Idler*, of Brighton, being first and *Wideawake* second and the *Mystery* third. AN MK.

NEW BEDFORD YACHT CLUB.—*Enice* won in the first regular regatta of the club, Thursday, June 27. Time, 1h. 36m. 40s.; course, six miles in the harbor.

NEW ORLEANS YACHTING.—The Southern Yacht Club held their first annual regatta June 24 and 25. On the second day the yachts were sailed by professionals and were divided into four classes, five starters in the first, two in the second, four in the third, and four in the fourth. Wind strong E. S. *Nathalie C.* and *Xiphias* proved themselves the best boats of the lot, beating the home-built craft. *Brender* carried away some of her gear and gave up. The finish was as follows: 1, *Nathalie C.*; 2, *Limnas*; 3, *Xiphias*; 4, *Restless*; 5, *Maggie*; 6, *Junia*; 7, *Louisa*; 8, *Gov. Claiborne*; 9, *Minnie*; 10, *Mary A.*; and 11, *Olivia*. Time of winner, 2h. 13m. 4s.; of the *Limnas*, 2h. 24m. 67s. *Xiphias* takes prize in second class; time, 2h. 25m. 29s.; *Maggie* wins in third-class in 2h. 31m. 31s., and *Minnie* in the fourth-class in 2h. 39m. 67s.

NEENAH, WIS., June 28.—The opening regatta of the Neenah (Wis.) Yacht Club takes place on Lake Winnebago, Thursday, July 11, and hosts from Chicago, Racine, Milwaukee, Green Bay, Oshkosh and Fondulac are expected to be present and take part in the race. LEO.

YACHTING DRIFT.

Addie Taylor will be matched against *Sophia Emma* for \$500. *Susie S.* offers to sail any of the first-class boats racing in the New York Bay regatta, for \$500 a side. *Dreadnaught* was not injured materially by going ashore on Mamaroneck. Sloop *Ella Treadwell* is cruising on the Potomac. *North Star* cruises eastward. *Resolute*, schooner, will soon be in commission. *Vidette*, steamer, at Newport. *Sophia Emma* has accepted challenge from Addie Taylor. Old Brooklyn Club House sold for \$175. *Flour-de-Lis* at Newport. *Flecting* hails from Whitestone.

OAR AND PADDLE.

THE EVENT OF THE YEAR.—Harvard has won! This was almost a foregone conclusion, for the new and green men of Yale could never have stood much of a chance against the old stagers of Cambridge. Yale was simply overpowered, and the best she could do was to make a brave fight and do justice to the indefatigable zeal and hard work of their famous coach, Mr. R. J. Cook, who has certainly done more than any other man to rid America of the chop stroke and hattery style of pulling, and to replace an old-time, worn-out dip, with the steady swing of old England. The course has been reverted to in these columns on previous occasions, and our predictions that the Thames would be found eminently fitted for the great race, and New London well able to entertain the thousands of visitors from all parts of the country without the infamous extortion practiced at other places, have been fully verified. The New London course may now be definitely accepted as the regular Putney-Mortlake of America, and ere long Winthrop's Point, the Navy Yard and Bartlett Point will become as historical in the annals of boating as the Crsh Tree, Soap Works or Barnes Bridge on the namesake of New London's River, near Old London.

Of the race itself little need to be said. With the start it practically ended. Yale went ahead the first few moments, but in an instant Harvard came out in the lead, and there remained. At the half mile she led Yale by two lengths, Cambridge pulling thirty-three and New Haven thirty-two. At the mile the blue had spun out its lead to four lengths, at two miles to six, and finally Harvard crossed the line a twelve-lengths winner, in 20m. 47.4s.; Yale's time, 21m. 20s. The crews were as under:

Harvard University Crew.—Bow, A. Crocker, class '79, age, 19.8, 152lbs., Fitchburg, Mass.; No. 2, L. N. Littauer, '78, 19.5, 161, New York City; No. 3, C. A. Wright, '77, 23, 107, Leominster, Mass.; No. 4, M. R. Jacobs, '79, 21.9, 170, Brownsville, Pa.; No. 5, Van Der L. Stow, '80, 18.9, 180, San Francisco; No. 6, N. M. Brigham, '80, 23, 170, Natick, Mass.; No. 7, F. W. Smith, '79, 18.9, 184, Worcester, Mass.; stroke, W. A. Bancroft, '78, 23.2, 161, Cambridge, Mass. Average age, 20.10; weight, 161lbs. Cox, F. H. Allen, '80, 104lbs., Hopedulu, S. I.

Yale University Crew.—Bow, J. W. Curtiss, class '70, age, 18, 148lbs., Fairfield, Conn.; No. 2, F. E. Hyde, '79, 20, 155, Hartford, Conn.; No. 3, C. A. Wright, '80, 21, 156, No. Hartford, Mass.; No. 4, H. Livingston, '79, 22, 150, New York City; No. 5, H. W. Taft, '80, 18, 164, Cincinnati, O.; No. 6, G. B. Rogers, '80, 20, 170, Lexington, Mass.; No. 7, D. Trumbull, '80, 21, 160, Valparaiso, Chili; stroke, O. D. Thompson, '79, 22, 168, Butler, Pa. Average age, 20.9; weight, 160lbs. Cox, C. F. Aldrich, '79, 114lbs., Worcester, Mass.

The two universities have been rowing against each other at different times since 1852, mainly in six-oared shells; but it was only in 1876 that the present programme of "eights," four miles straight away, was begun. The record since that time stands:

Year.	Course.	Winner.	Time.	How much won or lost.
1852	Springfield	Yale	22:09	30 seconds
1871	Springfield	Harvard	24:36	8 seconds
1878	New London	Harvard	20:14	4½ seconds

In reference to the methods of training and coaching each crew underwent we have already spoken in these columns.

HENLEY REGATTA.—The London Times does not speak very highly of either of the American crews on the Thames. Englishmen generally dislike their short stroke, as well they may. There is little hope for our oarsmen abroad as long as they jerk instead of swing.

UNIVERSITY OF VIRGINIA BOATING.—The second annual race between the River Boat Club of the University of Virginia and the Tobacco City Club of Lynchburg, took place June 28. The University crew took the lead with 33 strokes, while their opponents pulled 36, and later on spurred up to 40. The University crew turned the stake a length ahead and finally came in leading by nearly five lengths. Time 13m. 53s.

PIONEER BOAT CLUB.—At the foot of 84th st., South Brooklyn, the Pioneers held their annual regatta June 29. The first race was for four-oared gigs with two entries, the Punch crew and the Judy crew. The former pulled 40 strokes and the latter 36. Both turned together. Punch took the inside course and won by one length in 5m. 15s. The second race was for single sculls with five entries, but only two starters, Geo. Cox, Jr., and Jas. R. Beard. The latter won by five lengths, time 7m. 40s. The last race was for barges for the club colors. Entered Pioneer and Nereid crews. Almost a dead heat, but Pioneers won on a foul. Committee: Messrs. Stillman, Swan and Gunther.

ARLINGTON REGATTA.—The annual regatta of the Arlington Rowing Association took place June 27 in rough and lumpy water. Ph. Biglin starter, and W. H. McFarland referee. First race for singles. White's boat filled after having rounded the turning buoy first, and F. Pidgeon came in first but was not timed on account of going to assistance of Mr. White. Second race for junior singles, E. H. Platt, G. W. Thomas, B. F. Briggs and J. S. Brinckman were the starters. Platt led until his boat filled, Brinckman followed, swamping likewise. Thomas won the race in 12m. 25s. The four-oared race was the last event. The starters were: The Harry Moore—George W. Thomas, bow; R. V. Young, stroke; Frank Logan and A. J. Valentine. The Denis Leary—William Rexter, bow; Frank Pidgeon, Jr., stroke; J. B. White and C. H. Platt. The Little Flirt—O. Bock, bow; A. Baultman, stroke; J. D. Brinckman and J. Hutchinson. Course was shortened to a mile with turn. Both crews rounded at same time. The Moore's crew came in first, time, 5m. 6s. The pair-oared gig race was postponed on account of the rough water.

A LONG PULL.—The six-oared barge *Linda* of the Bachelor Barge Club, manned by Captain John W. Buckman, W. W. Righter, A. Maxwell Sheppard, S. B. F. Howell, Harry C. Miller, W. M. Gardner and John H. McFadden, started from the Market st. wharf for New York June 24, and reached Bordentown the same evening. On the 26th they pulled to New Brunswick and thence to New York in company with a crew sent out to meet them by the Aleyon Club of Brooklyn.

CANADA OARSMEN.—*Trenton*, June 28.—Bay of Quinte Rowing Club, Belleville, will hold a regatta the first week in August. The Leander Rowing Club, of Hamilton, held their four-oared club races on Burlington Bay, on Saturday, 23d June. The races were rowed in heats and created considerable interest; the first and last heats were well contested. The J. A. McKenzie crew were the favorites, and crossed the line in the final heat amid great cheering. Steamboats and railroads ran excursions, and it was a general gala day. The day's sport concluded with a tub race, and was of great amusement. They held regatta in August. *Haakon's* achievement at the oar has awakened great interest in rowing in Toronto, and unless one takes a pull on the bay, they cannot realize the extent of the epidemic. Every night the bay is covered with craft of all kinds, and to get clear water one has to go well out into the bay, and here he is in danger of being run down by the numerous racing skiffs. It is a favorable sign that so many of the young athletic men are paying so much attention to this style of rowing, and gives hopes that when *Haakon* lays aside the oar, some one will be found among them to maintain the credit of the bay. Just previous to *Haakon's* going to Pittsburgh he successfully conducted a skiff regatta at the Island. Since then the ferry-boat owners have purchased three medals—one gold, one silver and one bronze—to be offered for competition among amateurs. The gold medal becomes the property of the person winning it twice. The race will take place on the afternoon of Saturday, June 29, at *Haakon's* Point. Distance, two miles, half a mile and turn repeated. Skiffs are to be eighteen feet and under; entrance fee, nominal. The entries will be numerous, as most of the available skiffs have been engaged.

AN MK.

THE WORLD'S CHAMPION.—Later advice reports that Trickett only lost the third joint of one little finger on his left hand, and that the accident will not interfere with his rowing. If he should accept Courtney's latest challenge the latter will leave for Australia from England, where he first goes to pull Higgins in September.

WASHINGTON BOATING.—The tenth annual regatta of the Annapolis Boat Club was held on the Potomac, June 29, and was a very successful affair. First race for single sculls. Entries: Mac D. Douglas and F. Whiting. The former upset, and Whiting wins in 11m.; distance, a mile and three-quarters. The second race was for four-oared shells. Entries: *Undine*—Mander, stroke; Dunn, No. 3; Elliott, No. 2; and McKinney, bow. *Fraud*—P. Page, stroke; Campbell, No. 3; Jones, No. 2; Burdette, bow. Won by the *Fraud*, 10m. 4s. Third race was for pair-oared gigs. Entries: Jennie—J. A. Campbell and E. S. Mander; *Maedel*—Parker Page and C. L. Burdette. Won by *Maedel*, 10m. 5s. Fourth race, six-oared shell *Gaiymede* against winner of four-oared race. The four-oared shell *Fraud* won, 11m. 4s. Fifth race, eight-oared barge *Falcon* and ten-oared barge *Annapolis*. Hall and Brown steered the boats. *Annapolis* won in 10m. 4s. A tub race and a dance finished up the day. Starter and Judge, Mr. White.

CARMANSVILLE REGATTA.—The sixth annual regatta of the Carmansville Association was rowed June 29 at 153d street. Mr. L. S. Stockwell acted as referee, and Messrs. S. I. Knapp and C. G. Baker were the judges. The first race was for junior singles. Entries: H. A. S. Martin, George M. Cushing and A. J. Keegan. The former came in first in 14m. 44s. several lengths ahead. The next race was for senior singles. Entries: P. Hunt, D. De Long and A. B. Wilson. Won by Wilson in 13m. 19½s. The third race was for junior gigs. Entries: A. L. Souldard and Kate C. Won by the *Souldard* in 13m. 36½s. The last race was for four-oared shells. Entries as follows: B. Wilson, stroke; S. F. Knapp, Jr., No. 3; D.

De Long, No. 2; V. G. Audubon, bow, of one crew, and P. Hunt, stroke; A. J. Keegan, No. 3; A. E. Mills, No. 2, and George M. Cushing, bow of the other. The former crew kept a little ahead of the latter all the way, and won in 13m. 10½s. A barrel race finished up the day's sport.

NEW ORLEANS BOATING.—The fifth annual regatta of the Orleans Rowing Club took place at New Orleans, July 25. The first race was for wherries; won by J. J. Carroll in 6m. The second race was for single sculls. Entries: *Nameless*, C. N. Edwards; *Ripple*, Madison Dallas; *Pitz*, P. J. Gillen. Dallas unshipped his seat and Edwards caught a crab. Gillen was bringing up the rear. Edwards kept up his 38 stroke and came in winner in 6m. 10s. The next race was for four-oared gigs. Two entries—*Farrell* and *Wells*. The former went to the front and came in winner, time, 5m. 32s. The four-oared shell race was the last event. Entries: *No Name* and *Sam Boyd*. The former took the lead, and, pulling a 42 stroke, won in 5m. 33s. Judges, J. B. McConnell and R. H. Brown; starter, L. S. Waltons; timer, Y. A. Woodward.

A new rowing club, to be called the Bay of Quinte Rowing Club, has been organized at Belleville, Ont. It starts with a good membership, and bids fair to be a success. This organization will hold a regatta in August.

ROWING RIFPLES.

Thalian Dramatic Club offers a cup for the boat race at Norfolk, Va., July 10. Elizabeth and Chesapeake clubs have entered and Washington crews are expected. Potomac Boat Club held their annual regatta June 26. Three races and very successful. Elliott and Blackman, of England, will meet. Newcastle folks charge Elliott with selling his race with Higgins. Great times in Boston, July 4th. American crews will not enter at Paris as they pull without coxswains, and our French consins are not yet equal to that style; but Lee may pull in the single sculls. Barry and McDevitt will row Brown and Brady at South Cove, Jersey City, July 8. Kennedy, of Lowell, Mass., was beaten in a two-mile sculling race at that place by Michael Lynch, of Salem, June 28. Cornell freshmen crew arrived at Ensenore, Owasco Lake, June 24, and have gone into active training.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

Problem No. 20.

Tourney set, No. 16. Motto: Forget me not.

White to play and give mate in three moves.

SOLUTIONS TO PROBLEMS—NO. 19.

| 3—K mates | |

Game No. 68.

A game in the International Correspondence Tourney between L. S. Atkinson, of Tilton, N. H., and Henry Weight, of England:

White, Atkinson	Black, Weight	White, Atkinson	Black, Weight
1—P-K4	1—P-K4	13—Q-Kt-Q2	13—Kt-K2
2—K-Kt-B3	2—Q-Kt-B3	14—Q-Q3	14—Kt-K3
3—B-B4	3—B-B4	15—Kt-K4	15—P-K B3 (d)
4—P-Q Kt4	4—B-K8 P	16—P-K8 P	16—P-K4 P
5—P-B3	5—K-K4	17—Q-Q3	17—P-Q B3
6—Castles	6—K-Kt-B3 (a)	18—Q-K B5	18—K-Kt
7—P-Q1	7—Castles	19—Kt-Q6	19—K-Kt
8—P-K8 P (b)	8—Kt-K8 K P	20—Q-K R5	20—K-Kt K1
9—Q-Q3	9—Kt-B4	21—Q-B B1	21—R-Kt
10—Q-Q5	10—Kt-K3	22—B-R6 ch	22—K-Kt
11—B-R3	11—R-K1	23—Kt-R4	23—Kt-K4
12—P-Kt3 (c)	12—B-Kt3		

White announced mate in eight moves.

THIS SOLUTION.

24—Q-R Kt	24—B-B7 or 4 (best)	25—Q-Kt R ch	25—K-Kt or B2
25—Kt-Kt	25—B-Kt Kt	26—Q-Kt ch	26—K-Kt
26—Q-Kt ch	26—K B2	27—Q-Kt ch	27—K-Kt
27—Q-Kt ch	27—K-K1	30—Kt-B5 mato	

NOTES BY S. LOYD.

- (a) A very risky line of defence. 6—P-Q3 is preferable.
 (b) We see no harm in the capture of this pawn, although a better move would have been 8—Q-B2.
 (c) A better move than R looks, not so much for the purpose of guarding B4 as preparing to play Kt-R4 and advance Bishop's Pawn—which line of attack Black does well to prevent. (A was at on elbow angling that if White had played 12—P-K R3, and if the game had proceeded as in the text, it would have given White a beautiful three-move problem on the twenty-first move.)
 (d) This move seems equivalent to giving the game into White's hands. The impetuosity of our youth would have induced us to attempt to turn the attack by playing 16—P-Q3, which might have been followed by 16—P-K8 P, 16—Kt-K B5; 17—P-Kt Kt, 17—Kt-Kt P; 18—Q-B2, 18—B-K B4; and White has a most difficult game to defend.—*Hartford Times*.

CURSORY JOTTINGS.

—The award of the committee appointed to adjudicate the prizes offered by the American Chess and Problem Association in its first grand problem tourney has been made public, and from it we learn that the following are the winners: First prize set and best problem of the tourney, Samuel Loyd (motto: "A Fair Field and no Favor"), 63 points; second prize set, Wm. A. Shinkman (motto: "Fair Play"), 59 points; third prize set, Dr. C. C. Moore (motto: "Sic Transit Gloria Mundi, afternoon"), 57 points; fourth prize set, author unknown (motto: "Che Sara, Sara"), 56 points; fifth prize set, X. Hawkins (motto: "Fellows, Stand Fast"), 55 points. The committee—Messrs. Reichelm, Elson and Neill, all of Philadelphia—are of so well known ability that to review this tourney competition hardly seems necessary. We have fully satisfied ourselves that the award of the first prize is open to no adversative criticism, relatively considered, and it is with considerable satisfaction that we congratulate the winner, Mr. Loyd, the famous problemist. The award of the prize for the best problem of the tourney to Mr. Loyd's grand four-mover is very good judgment on the part of the committee. This problem will not only add to the reputation of Mr. Loyd, but also always rank as one of the finest problems extant.

—Mr. Loyd, the St. Louis *Globe-Democrat* says, will shortly publish a book containing 500 of his problems. This will be a welcome addition, and still more valuable would be a book on the art of problem composition by this great problemist.

—Our exchanges and readers are informed that this is a season of the year wherein the *FOREST AND STREAM* has to toe the mark, and Chess must, in consequence, suffer more than the other departments. There is no danger, we believe, of its annihilation.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Centropomus atrarius</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archosargus probatocephalus</i> .
Salmon Trout, <i>Salmo confinis</i> .	Striped Bass, <i>Morone chrysops</i> .
Land locked Salmon, <i>Salmo gairdneri</i> .	White Perch, <i>Morone americana</i> .
Black Bass, <i>Micropterus salmoides</i> .	Weakfish, <i>Cynoscion regalis</i> .
<i>M. nigricans</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
Muskellunge, <i>Esox nubilus</i> .	Spanish Mackerel, <i>Cybitum maculatum</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Cero, <i>Cybitum regale</i> .
Yellow Perch, <i>Perca flavescens</i> .	Bonito, <i>Sarda pelamys</i> .
	Kingfish, <i>Menticirrhus nebulosus</i> .

TROUT FLIES IN SEASON FOR JULY.

Little Egg, No. 12.—Body and feet of orange and yellow, mohair and hare's ear mixed; wings, bright hyaline, slightly mottled; setae, same as wings.

Lightning Bug, No. 10.—Body of equal parts, of dark brown, and black mixed, tipped with yellow; feet, of feathers from the English grouse; wings, double, the inner wing black, the outer wing a yellow brown.

General Hooker, No. 9.—Body made of bright yellow and green, ringed alternately; feet; red hackle; wings, of the tall feathers of the ruffed grouse.

Little Claret, No. 11.—Body and feet, dark claret mohair, slightly tinged with blue; wings, of the bittern, or brown hen; setae, dark brown.

Claret Fly, No. 9.—Body, dark claret; feet, black; wings, of the brown hen.

Petio Green, No. 10.—Body, feet and wings, a pale green.

FISH IN MARKET—RETAIL PRICES.—Bass, 18 cents; blue fish, 5; salmon, 20; mackerel, 18; Spanish mackerel, 15; green turtle, 10; terrapin, \$18; halibut, 15; haddock, 6; king fish, 20; codfish, 5; black fish, 10; flounders, 8; porgies, 6; sea bass, 15; eels, 18; lobsters, 8; sheepshead, 15; whitebait, per pound, \$1; hard crabs, per 100, \$3; soft crabs, per dozen, \$1.25.

Fish of all kinds is very plentiful. New York and its vicinity is beginning to appreciate more thoroughly the excellence of whitebait. Just now the demand is in excess of the supply. Some quite ingenious attempts have been made to palm off some small fish, notably spearing, on the gastronomic community, as whitebait, but the public having been quickly educated discard all such tricks. The new devices employed to secure whitebait are likely to teach us a good many points as to the young of fish. Quite small mackerel and bluefish, two inches long, have been caught at Gravesend Bay.

IDENTITY OF ENGLISH AND AMERICAN WHITEBAIT.—To satisfy himself that we were blessed with the daintiest of fish, Mr. E. G. Blackford addressed F. J. Moore, Esq., Curator of the Liverpool Free Public, requesting him to send to the United States specimens of whitebait. Under date of June 19, Mr. Moore writes as follows: "I have much pleasure in sending you a few specimens of 'whitebait.' They are contained in two bottles, and are from specimens purchased in our Liverpool fish market. Those in one bottle were sold as 'London whitebait,' those in the other are from the river Mersey. They are reputed whitebait as sold by respectable dealers, but have not been critically examined." On examining the samples of whitebait, saw that the bottle with the London whitebait was a trifle smaller than our own. The fish are identical.

CANADA—Lower Camp, Grand River, June 22.—Great sport; 80 far thirty-one salmon; heaviest thirty-two pounds; average, seventeen pounds. **IMBRIE.**

Bay Chaleur.—A New York correspondent, "Novice," who has just returned from Bay Chaleur, sends this score of salmon for one rod, seven days: June 14: 38, 30, 24, 12—104; 15: 19, 24—43; 17: 25, 18, 22, 26, 23, 14—153; 18: 34, 22, 24, 24, 22, 19—145; 19: 12, 24, 23, 26—87; 20: 26, 27, 12—65; 21: 22, 24, 24, 24, 20, 11, 23—148; total, 33 fish; 745 pounds.

EASTERN TOWNSHIP—Montreal, June 21.—Ash. Hubbard, of Magog, and myself have just returned from the "Bog" (East Branch), a few miles north of Magog. We have a fine lot, and of good size. The catch of trout has been very large for the township this season. I wish to again call the attention of the Vermont fishing officers to the fact that pot-hunters from this side of the line are playing sad havoc among the trout in Averil Pond. One party has some 1,200 feet of gill nets, that they often use in the pond, and during the spawning season they kill large numbers of trout. The Canadian sportsmen in that vicinity are very indignant about this poaching,

and would gladly give information that would lead to the capture and punishment of those rascals. I have their names, and will give their address on application. Peveril Pond contains the finest and largest brook trout of any pond or lake in the State, and if the Vermont sportsmen would bestir themselves and co-operate with our sportsmen here, its waters would be protected, and the ring-leaders (three in number) of these pot-hunters would be effectually disposed of.

STANSTEAD.

IN THE EASTERN TOWNSHIPS—New York, June 28.—We have just returned from a short fishing trip in the Eastern townships. Leaving the Passumpsic R. R. at Ayers' Flats, we had a pleasant drive to Magog, at the outlet of Memphremagog Lake; passed Lake Massiawippi, noted for Muskalonge and lunge. At Magog, under the guidance of your occasional correspondent "Hubbard," we found considerable sport. The brook trout fishing was rather quiet, although by work one can always catch a mess; no large catches. In the lake one are now caught by deep fishing, the trolling season having gone by. Some good sized fish have been taken, and among one lot we saw several small shad. Pickerel fishing we found good, taking some weighing as high as three pounds, trolling with live bait. We found good lunge fishing in Orford Pond, and tried the trout in "Hopps' Pond," but without success, as it was too late. "Old Hopps," the noted bear hunter of the neighborhood, showed us the skull of the last one he killed. The bear dressed over 450 lbs., and was killed about six weeks ago. This makes the eighty-fourth bear he has killed, and he now has track of three more. During our visit we made the ascent of Mt. Orford, the highest mountain in the Province of Quebec, and from the summit of which can be counted thirty-three sheets of water, and by the aid of a glass the spires in Montreal can be seen in clear weather. Mr. Furhoye, the superintendent, and the employees of the Waterloo and Magog R. R., do all in their power to accommodate sportsmen as much as possible. Continuing our trip, we drove to Georgeville, some ten miles up the lake. This is undoubtedly the best spot for deep fishing on the lake, there being no less than eight or ten good fishing grounds, among which are the Drew Grounds, Bigelow, Packard and Black Points, etc., within a circuit of two miles. Lunge have been taken this season on these grounds weighing as high as 20 lbs., and when we left about 100 lbs. of fish were brought in daily. We fished in a boat on Sugar Loaf Pond, which is about four miles from Georgeville, and is noted for its fly fishing. The trout are small, the largest not going over 1½ lbs., but are plenty and give good sport. As many as eighty fish have been taken by a single party in a day. To fish this pond properly one should go prepared to stay two or three days, and either camp out or stay at one of the two log cabins on the shore. We would advise camping. By reason of unfavorable weather did not make a large catch, but we are satisfied that there are plenty of trout in the pond. From Georgeville we drove to Newport, Vt., where there is good lunge fishing and excellent sport among the pickerel. Trout fishing is scarce, and we would not advise a stranger to go to Vermont with that idea as there is a State law prohibiting fishing without a permit, as we understood it. At St. Albans and Burlington we were informed of good fishing in the neighborhood, but cannot vouch for it from personal experience. On Lake George some trout are being taken. We made no large catches while in the townships, but by working we always could catch some fish. Every one tried to put us in the way of sport, and we feel sure that others would be treated in the same way. **S. Q. J.**

MASSACHUSETTS—Boston.—Mr. E. M. Messenger, the proprietor of the Bromfield House, 55 Bromfield street, Boston, has received from Luther Hayes, Esq., of the New Hampshire Fish Commission, eight beautiful black bass, the largest of which weighs about three pounds. They are all lively and doing well and are to be exhibited in the windows of the Bromfield House, where the lovers of bass fishing can daily study their habits and movements. They already show a decided preference for the live minnow as an article of diet.

GREENWOOD LAKE.—The hotels are rapidly filling up. The Montclair and Greenwood Lake Railway have reduced the fare from New York to Lake from \$2.75 to \$2 excursion ticket. There is every prospect that the railroad will be extended at least to the head of the lake, if not further, before the close of the season.

WEST VIRGINIA, near Ronceverte, June 24.—Last week a companion and myself went into Nicholas County, and fished the Cherry and Laurel rivers. With fly and bait we took 401 fine trout. **J. N. H.**

STRAY NOTES FROM THE EDITOR—Kanawha Falls, West Virginia, June 29.—The black bass are just beginning to show up. I spent this A. M. at the Falls, just at the town, and took fair bass and white perch. I have seen the head of an 8½ lb. bass. Pike perch are common here in Mareh, and it is a delightful spot for anglers and shooters. Mountain trout all around in large numbers. Good hotel. **HAL.**

KENNEBEC ASSOCIATION FOR THE PROTECTION OF FISH AND GAME.—Our thanks are due to the secretary, R. B. Capen, Esq., for a polite invitation to a piscatorial fete at Cobboscontee Lake on the Fourth of July.

MICE AND TROUT.—A gentleman just from the Adirondack region gives us the following information. Fishing in the head waters of West Canada Creek, Hamilton County, in the streams well known to certain trout, no fish would rise to the fly. Feeling certain that fish were there, a sinking bait was used and trout were readily caught. In opening some of them, the fish were found to be gorged with mice. In one trout of 1½ pounds two mice were found, and one of six ounces had a mouse inside of it. The veteran of the party, the guide, told the story that some years ago he had taken twenty-two trout, and that many of the larger ones contained mice. This circumstance—not exceptional, of course—was accounted for by the fact that the winter having been an unusually open one, beech nuts had been in extraordinary quantity, and hence the woods were alive with mice. The omnivorous characteristic of trout are well known. Their feline instinct, then, as mouse catchers may be positively asserted. Perhaps cultivated trout might have a fat mouse thrown them

from time to time. But we would not advise that this method of feeding be followed out. At the period of Mr. Blackford's annual trout show, a two pound cultivated trout with a mouse inside of him might not be relished by the bon vivants who pay a dollar a pound for him.

ARABIAN NIGHTS FISHERMAN.—The glorious days of the Arabian story-tellers have come again. Here is a modest tale in confirmation from Duhuque, Iowa, June 24, 11:30 A. M.:

A fisherman caught a catfish (channel) weighing three hundred and twenty-one and a half pounds (321½), head, 24 inches in length, 15½ inches in width, having a turtle in his stomach weighing 13 pounds, a brass watch and a tapeworm 36 feet long. **J. L. C.**

FISHING TACKLE.—You conceit that the fly you have been using for the last half hour has no attraction for the trout. You want to change. You dive into your old-fashioned fly, a book, and in your excitement drag out, instead of one fly, a half-dozen of them, and they are all mixed up and tangled. Now, had the angler one of the "Hyde Clip" fly books, where each and every fly is kept separate, such as Messrs. Wm. Mills & Son, of No. 7 Warren street, sell, no such trouble could arise. For complete outfits for bass and trout fishing we can particularly recommend the work of this house. There is what this firm calls their No. 2 outfit. Here is a three-piece, full mounted fly rod, of lancewood middle and tip, with a neat rubber click reel, twenty-five yards of oiled silk line, a dozen first-class trout flies, a dozen hooks on gut, a leader and a fly-book, all for \$10. For \$20 Messrs. Mills & Sons will let the angler have a full-mounted black bass rod, with all the rigging. All these rods are as good as care in finish and choice in selection of material can make them. Of six-strip split bamboo fly rods an infinite variety is offered, costing from \$17 to \$30.

FISHING STEAMERS.—The proprietor of the mills of the American Net Co., Boston, having written to our Shelter Island correspondent, asking the effect upon the fish of the fishing steamers employed in the bunker fisheries there, he says in reply:

"The steamers that do not seem to alarm or break up the schools any more than do the sailing vessels are propellers, and move but with little noise. As soon as the fish are seen the steamer is stopped at a remote distance, the two boats with their seine are manned and start in pursuit. The school is surrounded and taken; the steamer is brought along side of the boats and the catch transferred to the vessel, which returns without delay to the factory. Notwithstanding the great number of vessels and steamers engaged in this business (and there must be as many as fifty such in these waters) the numbers of bunkers do not seem to suffer any perceptible decrease, and they are as plenty as ever. But as I said in a previous letter, the sailing craft work at great disadvantage and the steamers are so much more successful that it is likely that sail in most cases will be superseded by steam. A steamer carries a crew of ten men, viz., one engineer, a cook and eight boatmen, and of course is more expensive than a sailing craft, but the success is so much greater that steam will have to be used. The bunker fishing has but little or no effect upon the taking of food-fish, but the numberless pounds of fish line these shores catch up most of the food-fish and greatly interfere with the hand-line committee. **ISAAC McLELLAN.**"

For Forest and Stream and Rod and Gun.

BASS AND BASS FISHING.

SECOND PAPER.

THE most remarkable thing about fish and fishing is the few anglers who ever notice the markings of their game, and who, having noticed them, can give a lucid idea of their distinguishing characteristics. With the exception of Audubon, Wilson and Thoreau, our naturalists are very rare. Not that there are not abundance of men who can give you all the markings of a brown thrush or a blue jay, who could not tell a bream from a black perch to save their lives. They think it beneath their dignity to fish or to write about fish. With such would-be naturalists this paper has nothing to do. With the sole exception of Charles Hallowell, Esq., and William Henry Herbert, no writer has thought proper to write of the game and food fishes of North America. Herbert was a poet naturalist, and gave some good points in his "Fish and Fishing," but he knew next to nothing of bass; for I doubt if he ever caught a Western bass, beside which all other game fish, in my estimation, are as nothing. Herbert speaks in three places of the striped bass of the Passaic River. They were simply small sea bass. We shall find in fresh water fishes an analogous counterpart in the ocean. For example, the bream is the fresh water sheepshead. The same shy, nibbling bite; the same gallant conduct when hooked, and often the same markings. But this paper has to deal with bass, and principally with striped bass, not the great, lumbering fellow who lies in full ten fathoms of salt water, and has to be dragged out of the depths by main force and with a hand line; but a clean, active game fish that never saw salt water and could not live in it, should he be so very unfortunate as to come into the "briuy."

Our fish, then, is *sui generis*; he is the counterpart of the sea bass, and only a naturalist can tell the difference. (In my humble way I claim to know something of natural history). Well, mark well, here is the difference: The stripes are precisely alike, or nearly so; the general shape of the fish the same, but the gentleman who lives in fresh water has a smaller mouth, and he is broader in proportion to this length than his salt water congener, and the anal fin is much broader and the tail is not quite so much forked. I send you a drawing from memory. So very small is the mouth of this fish that a No. 7 salmon hook is the only one upon which you can depend; and even then you will fail to hook specimens that weigh under two pounds. There are but few streams in the West that contain this noble fish: the Green River in Kentucky, all the streams of Missouri that empty into the Missouri, and the tale is told. The Merrimac, about fifteen miles below St. Louis, contains the finest that I ever saw; for, while in the Greene River a striped bass that weighs five pounds is considered an exceptionally large one, I have caught them in the Merrimac weighing full seven pounds. A bold biter and a hard fighter, this fish affords to the true angler some of his rarest hours of enjoyment. I remember once, in the autumn of 1857, that I went upon the Merrimac for a day with the striped bass. My companion was a retired Indian fighter and Rocky Mountain hunter. In equipment and outfit in those days I was a modified angler of the first water. Old Jim, the hunter, had a

long cane and a grass line. He caught more fish than I did, but I had more fun with one of mine than he did with all his, for he thought the whole duty of man to consist in hauling one in when he bil. Never shall I forget that day. The gentle murmur of the placid stream; the rosy light of the sun made rosier still from its reflection from the crimson leaves of the maples and sycamores that overhung the stream; the sweet stillness of the purple day, broken only by the whirr of the reel or the boisterous shouts of my companion, all conspired to make this day one of the few perfect angling days over which my memory fondly lingers, and even now I can recall the thrill that shot through my frame as a six-pounder would run out fifty yards of line and then settle down to hard work. Ah me! As I recall those glorious days of bass fishing, of deer shooting, of turkey hunting, I can scarcely realize that I am no longer young and that these hands may never more capture a bass. But a truce to this.

I made the statement a few paragraphs back that the striped bass could only be found in Green River and the streams of Eastern Missouri. It is also found in countless numbers in the White River in Arkansas. Those in the White River are hardly so large as I have found them elsewhere, but they afford fine sport. There is a fish found in the White River and St. Francis River very much like this fish, but he is a perch. In fact the striped bass is shaped very much like the red perch. Hence, many persons on White River call them "striped perch." Nor must the striped bass be confounded with the rock fish (*Roccus C.*) of Southern waters. He, too, stays in fresh water, but he is nothing but a sea bass out of his element. The genuine (*Roccus C.*) never was in salt water, while his brother, the rock fish, lives in either salt water or fresh. Following I give you the marks of each:

Rock Fish (mouth, large).—Body, long and round; tail, very forked; eyes, rather large; stripes, close and light.

Striped Bass (mouth small).—Body, broad and thick; tail, scarcely forked; eyes, rather small; stripes, wide and dark. Color of both, a pale white.

The striped bass feeds on minnows and crawfish. In the White River he will rise to a gaudy fly with as much gusto as e'er a mountain trout. In no other stream have I been able to catch them with the fly, and then in June only. Make the body of your fly of black silk, the wings of red silk, and you have a killing delusion. What the bass mistakes it for is one of those things "past a fellow's finding out." I think that he takes it out of pure "cussedness," for he is a bottom feeder, and crawfish are his main food in White River. However, we all know too much to guess at fish vagaries! But in all my angling I never knew a striped bass to be caught with a worm. His instincts are too gentlemanly. And indeed, I never know but one black bass caught with a worm. What he may do, transplanted into your waters, I cannot say, but I think with the poet:

Chum, non animum;

he may change his water, but not his mode of feeding. The striped bass is not so wary as the black bass; but even he loves a fine light line and a small hook. *Ceteris paribus*, the angler who fishes finest will always kill most bass. And so with all angling.

It is very remarkable that the attention of fish culturists has never been drawn to this valuable fish. He is unexcelled for the table, and is, in my opinion, not inferior to either the speckled trout or salmon. He is very prolific; multiplying with amazing rapidity in rocky ponds that are fed by springs. As a proof that even the salt water perch will live and thrive in fresh water, I call attention to the fact that Waccamaw Lake, in South Carolina (head of Waccamaw River) abounds in salt water perch.

None of your four ounce fellows, but a fine, clean, striped fish, weighing from one pound to four, and as game as any trout, and nearly as toothsome, and "millions" of them. Nor again, must the striped bass be confounded with a fish found in the Great Pee Dee, South Carolina. It is called "Virginia perch" there (*Cui?*), but it is no bass. At first sight they are very similar, but on examination I found them to be nothing but salt water perch developed into aldermanic size by good feeding. They often weigh five pounds.

Now, Mr. Hallock, I have thrown down the gage of battle. I know that many will doubt the truth of my statements and rush into print with loud obnoxious cries and annihilating vituperations, but I expect to survive them. This paper is written solely for those who use their eyes, and not for pot-fishermen. In my next I will enlarge upon some points merely touched here. Fraternally,

ST. CLAIR.

Rational Pastimes.

UNION ATHLETIC CLUB.—The spring meeting of the Boston, Mass., Union Athletic Club were well contested last Saturday, the events being as follows:

Throwing sixteen-pound hammer—R. Johnson, Brookline; W. W. O'Connell. Won by the latter, whose best throw was 84 ft. One hundred yards' run—Twenty entries—First heat, J. B. Elliot, S. A. O., N. Y., 10½; second heat, J. G. Lathrop, 11 1-5; third heat, W. A. Morrison, 11½; fourth heat, F. J. McQuigun, 11½; final heat, Lathrop, 11½; Elliot, second; McQuigun, third.

Hop, step and jump—Unsuccessful attempt by Johnson, U. A. C., to beat best recorded distance; five trials. First, 42 ft.; second, 41 ft. 4 in.; third, 43 ft. 6 in.; fourth, 42 ft. 4 in.; fifth, lost his footing.

Running high jump—Five entries—Won by H. Carven, whose best jump was 5 ft. 2 in.

One mile walk—Eight entries—Won by T. H. Armstrong, H. A. C., N. Y., in 7 m 8 s; E. E. Merritt, U. A. C., second in 7 m 16 s.

Running broad jump—Won by McQuigun, whose best jump was 18 ft. 2 in.

Hurdle race, 100 yards, 10 hurdles—Three entries—Won by F. Burgess in 19½ s.

One-half mile run—Seven entries—Won by F. Banham, U. A. C., N. Y., in 2 m 14 s.

Three miles walk—Nine entries—Won by Armstrong in 24 m 37½ s.

Quarter-mile run—Seven entries—Won by Banham in 5½ s.

One mile run—Twelve entries—Won by J. M. Soule, U. A. C., in 4 m 54½ s.

Tug of War—Norway Iron Works team defeated the Jack Tars in 6½ s; the German team pulled the Organ men over the line in 24 s; final heat between the Celts and Teutons won by the former.

A game of lacrosse between two teams made up of members of the Union Athletic Club as follows—Flannery team—Flannery, home; Ferris, goal; Thomas, pointer; and Hook, Hathaway, Marquand and Williams, fielders; McDonald team—McDonald, home; Matamorán, goal; Jacobs, pointer; and Howard, Wood, McLee and Eiler, fielders; resulted in a victory for the former.

MANHATTAN ATHLETIC CLUB.—Annual Spring Meeting, at Club grounds, 56th st., New York, June 29:

Two hundred and twenty yards' run—Twelve entries—F. V. Brown, handicapped 20 yds., won in 24½ s.

Running high jump—Four entries—Won by H. E. Fickon, N. Y. A. C., 5 ft. 3 in.

Throwing hammer—W. T. Livingston, H. C., 76 ft.; George D. Parmly, M. C., 75 ft. 10 in.

Quarter mile run—One bent—E. C. La Montagne, N. Y. A. C., won in 64½ s.

Running long jump—Won by W. T. Livingston, H. C., 19 ft. 6 in.; G. McNichol, M. C., 19 ft.

Putting the shot—E. H. Buermyer, 35 ft. 7 in.; J. Britton, 33 ft. 7½ in.

One hundred yards' run—Trial heats, eight entries—R. L. La Montagne, N. Y. O., won in 10 s; J. Lafon, M. B. C., second.

Half mile run—Won by E. Merritt, N. Y. O., in 2 m 10½ s; J. Stewart, P. O. C., second.

Two mile walk—T. A. McEwen, M. C., won in 16 m 16½ s; J. V. Woolcott, second.

Vauling with pole—Won by George McNichol, M. C., 9 ft. 3 in.; A. Ing, S. H. (N. J.) C., second, 9 ft.

One hundred yards' hurdle race—ten hurdles, two heats—E. H. Fickon, N. Y. O., won in 15 s; J. Lafon, second.

Three mile run—V. H. Smith, M. C., won in 16 m 54½ s; T. B. Bates, H. C., second.

The prizes awarded were gold and silver medals.

CRICKET.—In a game at New Bedford, Mass., last Saturday, the club of that city was defeated by the Fall River Club 148 to 59.

The Onondagas, of Syracuse, N. Y., defeated the Coburgs, of Canada, last week, 93 to 41.

The St. George's were defeated by the Staten Island Club at Camp Washington, last Saturday, 150 to 151.

Brooklyn has a new club—the "Royal"—which has secured the old Capitoline Ground.

The match between the Australian players and the Gentlemen of England, at London, resulted in a victory for the latter in one inning, with one run to spare, the scores standing: Australians, first inning, 75; second inning, 64; total, 139. Gentlemen of England, first inning, 139. The Australian team returns to this country Sept. 20.

—Beslie Hounds from fine stock and fine hunters, \$20 a pair. Address Dr. Kennedy, Anburn, N. Y.—[Adv.]

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

M. D. H., N. Y.—A very fair gun.

N. D. Mills.—The solution will be credited you.

J. C. G., Cortlandt, N. Y.—See our Game in Season.

NAHANT.—The Mooshead Lake front season opens Sept. 1.

A. L. L., City.—Woodcock season on Long Island opened yesterday.

J. W. G., Philadelphia.—Have copies of Aug. 3, 1876. Price 16 cents.

C. A. S., Woodside, N. J.—The woodcock season in New Jersey opens July 4.

W. G. S.—Probably your postal card was not well directed. The party is perfectly reliable.

T. R. K., Wheeling, W. Va.—The rifle used to be made at Worcester, Mass. A very fair arm.

T. B. C., Watertown, Conn.—The Connecticut season for woodcock and partridge opens Oct. 1.

SECRETARY, AKRON, N. Y.—There is no limit for bore of gun in the N. Y. rules for pigeon shooting.

A CONSTANT READER, Fall River.—Bave not heard of him. Do not think he is a well known maker.

BLACK BASS, Phila., Penn.—Yes, the new law passed in June makes the black bass season begin in June.

R. L. G., Louisville.—Send your address to Trimble & Kiehlacker, 200 W. Baltimore at., Baltimore, Md.

H. W. B., Lowell, N. Y.—For the rules you wish address the Sec. Narragansett Gun Club, Newport, R. I.

B. P., Sextonville, Wia.—We know nothing of the parties. Have refused the farther advertisement of one of them.

F. G. Montgomery Co. Pa.—To subscribe to the Deutsche Jagdzeitung address Her Von Ivernois, Eilenberg, Prussia.

J. H. S., Boston.—You will find salmon fishing with moderate charges in New Brunswick, to the Nepisiquit and Miramichi Rivers.

W. A. Briggs.—B. R. we do not think will solve that problem. S. Q. S. is translated into Kt-Q Kt. Game will appear next week.

J. H. E., New York.—Would Tenady, N. J., be a good place to break my setter dog on woodcock? Ans. Yes. The season in N. J. opens July 4.

C. C. E., Boston.—Lake Winnepissaukee, N. B., is a good fishing ground. You will find partridges in the vicinity and upland plover on the islands.

T. P. Bull.—Set received. The four-mover is unnecessary, and will be considered as withdrawn. The balance will make a set which will duly appear.

J. C. M., Easton, Pa.—The rates of fare per steamer from New York to New Orleans are: cabin, \$50; excursion to N. O. and return, \$80; steerage, one way, \$35.

W. D. T., J. O., Jr.—The compass advertised in the paper is a very good one, and is exactly as represented. Would not think of going into the woods without one.

W. H. W., Millbury, Mass.—The gun you mention is an excellent gun and we do not deem it complicated. We must decline most respectfully making comparisons.

OLD SPORT, Van Buren.—The only of the choke-bore may be found in the last edition of Greener. No. 6 St. Louis is special as to size and we cannot fix any special rule. Your target is quite an excellent one.

J. B. McKim.—Don't for a moment imagine that we allow our judgment to run wild as others—you probably are aware have too often done. Have no misgivings; it was pity alone that actuated us to speak out in an advisory manner.

R. L. N., Salem.—Have tried to procure Herreboff's time table for you, but have failed to find one in New York. Write to him at Bristol R. I., and tell him to advertise his works with us, so that we may supply many other inquirers.

H.—What is a good pattern for my S. & W. shot-gun (breach-loading weight 7½ pounds, bore 12 straight, load 3½ drn. Hazard FG and 1½ oz. No. 5 shot; target 30 inch circle 40 yards and same at 50 yards? Ans. At 40 yards, 250; at 50 yards, 300.

Heary H. Miller.—Your set is at hand, but contains no extra problem in the shape of a four-mover. See above for further particulars.

J. B. Boaten.—Three men might make a living in Texas, or Arkansas by hunting and trapping, provided suitable arrangements could be made for marketing the game. If you have any capital you can do better by putting it into Texas sheep raising.

R. S. C., Reno, Nev.—In using two glass ball traps the screening them is optional. A good trap should throw a ball a distance of from 60 to 80 feet and proportionately high. The direction of the ball is the same, or is varied just as the club agree.

L. C. O., Homosassa, Fla.—For "pot leading" a boat's bottom give a thin coat of boiled linseed oil; then sprinkle, or dust on the blacklead powder and rub down smooth. Write to Waddell, 52 Beekman st., for it. Price 10 cents a pound. Get 35 pounds.

John G. Belden.—We have heard nothing from you in relation to the Challenge Cup. Cunningham will energetically back you up, and you can depend on the FOREST AND STREAM to support you from the front. No danger, is there, if you are thus propped up?

Max H. Peller.—When this you see, etc., you will doubtless have made all necessary preparations. We are prepared, not only for a week's good fishing, but also to play for the chess championship of that sheet of water. Be sure to bring along some sort of a cup for the championship emblem.

ENQUIRER, Belleville, Ont.—The "medium" rig of Susie S., formerly the Bella, is 33 ft. on boom, 37 ft. hoist, 11 ft. gaff; jib, 23 ft. 6 in.; foot, 8 ft.; leech and from mast to tack of jib, 26 ft. She is 27 ft. 4 in. long on water line. Beam and depth will be given in next issue, inquiries for same having been made.

B. F. H., Baltimore.—Your gun we do not think can be a fall choke. Whatever make it is the targets you write about are not good; quite below the standard and very uneven. We do not think you could get good pattern with 4½ drs. of powder; use 8½ and try that. You probably will do better.

REG. SUB.—Please state where description of the palace of the "Trianton" is found? Ans. The Trianton is a part of the palace of Versailles, and owes its celebrity in history as having been the favorite residence of Marie Antoinette. You would find a description of it in any encyclopedia treating of Versailles.

BEARS, Boston.—At Bethel, Me., you will be in communication with the Rangely Lakes and the Megalloway River and will find trout in the neighborhood. The game of the country is deer, caribou, bears, water fowl and partridges. Near Mount Monadnock, N. H., you will find trout and pickerel fishing, and bears in the mountains.

FIRST ATTEMPT.—Cannot supply you with model desired, as we have none on hand and it would be too expensive and require more time than we have to spare to make you one. Boat builders will charge you \$10 to \$25 for a model. We can apply you with plans of the boat you speak of for \$2. Such a boat would exactly suit your purpose.

FIRST SERGEANT.—Is there any grade in marksman's badges in New York State? I see where New York State troops were presented with badges, some received one, two and three bars. What are the bars for? Ans. There are no degrees in marksmanship. The bars are given for each year the holder of the badge has qualified. His score is published in General orders to show his skill.

DR. M. E. L., Frederick City.—Is it actually necessary to load a breach-loading shot-gun heavier than a muzzle-loader of the same gauge in order to get the same penetration? Please give ordinary load for breach-loading gun 12 bore of powder and shot, Dixon's measure? Ans. Same loads for muzzle-loader, or breach-loader? Use 3 drs. Dixon's measure of powder, 1½ oz. shot.

S. T. C., New York.—1. Are the Berdan shells so hard to prime? 2. Should there be any more trouble to prime a shell for breach-loader than to put a cap on a gun? 3. What shell is best? Ans. 1. Berdan shells are primed the same as all other shells. A tool called a re-primer to put primer on wds is useful. 2. A breach-loading primer needs to fit tight to prevent escape of gas. 3. None better than the Berdan—made by U. M. C. Co.

J. C. McL., Ulster, N. Y.—In a pigeon match between A and B the latter shot at and apparently missed the bird and thereupon an outsider before the bird was out of bounds, shot at the bird, which fell dead within the limits. The referee decided the bird lost to B. Was his decision correct? Ans. The outsider had no business to shoot at the bird. It may possibly have been hit by B. He has the benefit of the doubt and may claim another bird.

X. Y. Z., Bowmanville.—1. Would Creedmoor rules allow, for the purpose of receiving the recoil, the following contrivance: A strap is buckled firmly around stock just behind the pistol grip, and fastened to this a loop of leather large enough to receive the thumb; with this the thumb instead of second finger takes chief part of recoil? 2. On a perfectly calm day at 800 yards how much should be allowed for the "drift" of the bullet and how much at 1,000 yards? Ans. 1. It would not be against the rules. 2. There have been made careful experiments on drift; at 1,000 yards of a perfectly calm day the drift would be a trifle less than 18 feet.

W. E. B., Philadelphia.—Your case, we are pretty positive, arises from over feeding. You must starve him until you get him to eat on food than meat. Bave courage with your skill and he will gladly take to bread. It is not at present such as, but it might develop into a nasty disease. A mild asstringent of chlorate of zinc, one (1) grain in one ounce of distilled water, applied to the parts, should be used. Use it three times a day. Wash the dog carefully. If the trouble with the bowels continue, give the dog a dessert-spoonful of castor oil with two drops of turpentine in it. It is a disease of the blood, which may extend if not treated at once. Observe the greatest cleanliness this warm weather, or he might get worse.

J. E., Middletown, Conn.—The relative speeds of two boats differing in any elements of design is obtained by applying the following formula: Take the cube of the speed in knots, multiply this by the area of the immersed midship section, and divide the product by the indicated horse-power—obtained from indicator diagram. The higher the resulting quotient (coefficient of performance) the better the performance of engine, screw, model, clean bottom, etc., taken all together. Two boats of similar model and engine power, but differing in size, will therefore perform alike relatively, though positively the larger one will be the faster; that is, she will go over a measured mile in less time than the smaller boat, but, relatively to her size, she will not be faster.

GREENONE, Brooklyn.—1. On what terms are non-members admitted to test their guns, or shoot glass balls to the J. C. Heights G. C. at Marlton? 2. What are the terms of membership? 3. Are meadow hawks protected in Jersey, or New York State in July? 4. Where on the Palisades did your correspondent on "Pan Fish," of some months ago (I forget the date), find trout fishing? Ans. Members of the J. C. H. G. C. would be glad to see you at any time. There is always a man on hand to attend to traps and balls. 2. Address H. W. Levering, Sec., Newark Ave., opposite Court House. J. C. Heights Club practices Wednesdays and Saturdays at 4 p. m.; at other times open to all. Initiation fee \$10 and 25 cents monthly. 3. Yes, in both States. 4. Do not know ourselves.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, July 5.—Seawanhaka Y. C. Corinthian Cruise. Savannah, Y. C. Corinthian Race. Royal Henley Regatta, Eug. Cricket: Young America vs. Manhattan, Turnpike Bridge. Trotting: Cincinnati, O.; Detroit, Mich.; Bay City, Mich.; Dover, N. H.; Findlay, O.; West Meriden, Conn.; Robinson, Ill.; Tiskilwa, Ill.; Clyde, N. Y.; Youngstown, O.; Denver, Col. Running Meeting at Denver.

Saturday, July 6.—Beverly Y. C. Regatta at Nahant. Cricket: St. Timothy vs. Merion (21) at Wisahickon; Belmont vs. Manhattan, at West Philadelphia; Germantown vs. Philadelphia, at Nicetown. Trotting at Denver, Col.

Tuesday, July 9.—Cricket: Staten Island (24) vs. Manhattan (24) at Staten Island. Trotting: Bradford, Pa.; Topeka, Kan.; Suffolk Park, Phila.; Hartford, Conn.; Columbus, O.

Wednesday, June 10.—Credmoor: "Appleton" and Winchester matches. Newburgh Bay Open Regatta. Trotting as above.

PLAIN WORDS ABOUT SANTO DOMINGO.

SEVERAL persons who contemplate migrating from the United States to Santo Domingo, have written to us seeking information in regard to that island. We have been at some pains to secure what we believe to be most trustworthy and in every way reliable information, which we shall give as succinctly as possible to our readers. It may be premised that the views here presented are those of a gentleman, at present residing in Santo Domingo, whose general information, extensive travel, intelligent observation and experience as a resident in different parts of the world, attach to his opinions an exceptional value.

The climate, fertility of soil and natural resources of Santo Domingo have received a very large share of extravagant and undeserved praise. Especially may this be remarked of the Santo Domingo Report, compiled and issued by the United States Government at the time of the Santo Domingo Annexation period of Grant's administration. In this, apart from the roseate hues with which a tropical land is always colored in the eyes of visitors from colder climates, which we may reasonably believe to have influenced the United States Commissioners

in their examination of the Island, much of the testimony of the residents was a distortion of the truth, given under intimidation; and, further, much testimony of a nature adverse to annexation was withheld by persons who feared to tell the truth, and who would not give false views. The simple fact is, that the island of Santo Domingo is no more fertile than scores of other islands in the Atlantic and many localities in Central and South America. Any one who expects to sit idle and see the land yield a fortune will be most sadly disappointed. Landed proprietors refuse, save in rare instances, to sell their estates, but are perfectly willing to lease them for a term of years, well satisfied to see their neglected acres improved by foreign energy and capital. Beyond so serving as an instrument for the aggrandizement of Dominican indolence and shiftlessness, the successful foreigner is regarded with envious displeasure, which, growing apace with his continued fortune, harasses his peace, and eventually destroys his prosperity. To these untoward circumstances we must not forget to add the difference of habits and customs between the native and foreigner, the ignorance of the latter in the ways of the country, and the thousand and one difficulties never before dreamed of, but every where encountered by a settler in a tropical country, and which are well-nigh insuperable obstacles in the path to success. Theorizing aside, the most convincing argument is this: Of all the commercial and agricultural enterprises engaged in by foreigners on the island of Santo Domingo during the last five years, with a single exception, none have yielded any satisfactory or adequate returns for the expenditure of time and money. The single exception was that of two Cubans, who, with unlimited capital, have successfully engaged in sugar raising.

When, in addition to what we may term the private and personal difficulties everywhere surrounding the path of the immigrant, we reflect that the country is subject to continued and repeated insurrections, and that in these uprisings the foreigner may see his house and property burned about his head, and he himself subject to draft to quell the insurrectionists, the outlook is anything but inviting. If, with these facts before him, any one of our correspondents elects to leave the jurisdiction of the Stars and Stripes for that of Santo Domingo, he will probably meet with as much good fortune as he deserves, and no more.

THE PLAINSMAN.

IT is wonderful how persistent are false ideas. A good many honest people would rather throw overboard their entire creed, every article of it, than disbelieve that Frenchmen eat anything else than frogs, or Russians tallow. Now, as impossible a picture as we know of, false in every way, is the one the East has painted for itself of the Western man—the man of the plains. Many a New Yorker cannot divide the man from his clothes. Buffalo Bill may be a spectacle in his fringed buckskin shirt and ornamented leggings, but take Bill and put him in store clothes, and he is just like anybody else. The broad felt sombrero the plainsman don't like to put aside—and here he shows his wisdom. We stand to it, in hot weather the big felt hat is the best protection for the head. But it is not the outer man we want to talk about. Now, we of this paper have as good an opportunity as any one else of judging of the manner, of the talk of some of the most noted hunters, trappers and plainsmen of the far West. We declare them to be the most quiet and gentlemanly men we know of, and with the least brag and bluster about them. Something more, they are a peculiarly sober and temperate sort of men. Intoxication is rare with them, and they are by no means as much addicted to tobacco as are Eastern men. Your Western rowdy, the associate of the outcasts, the worst riff-raff of the plains, certainly exists, but in very much diminished numbers. Take some vile creature in our over-vaunted East and transplant him to the West, and the lad that was in him here comes out neither better nor worse in Indian Territory than in New York State. It is time that we should better understand the frank, the hearty, honest, and whole-souled manners of the plainsmen. A free, open-air life has given most of them a superb physique. We are shrunken up and pigmy when we stand alongside of these men. Somehow—and no one knows how it comes—these men are mostly imbued with a certain simplicity and straightforwardness of manner which has a peculiar charm of its own. They say what they mean without guile, and their word is their bond. It is a poetic type in form, shape and word, and is imbued with wonderful shrewdness. How long it may last no one can say. As he exists, as we have seen him, we are bound to express our admiration of the true plainsman, who is as honest, hospitable and courteous as he is brave and reliable.

THE FOURTH OF JULY.—This week's FOREST AND STREAM and ROD AND GUN is of twenty-eight pages. This issue we are forced to send out on Wednesday, as mailing facilities are not to be had on the Fourth of July (Thursday), our usual day of publication. The Fourth! We shall hie to some far distant island on that day, where the small boy with his cracker is unknown. We want holidays—more of them in this country. It is true that on the 5th there will be no end of burnt fingers to record; still we hope all our readers who want to explode things will have a good time of it, and be as noisy as the character of the day justifies. Be (bang!) free (whizz!) and be happy (boom!!!)

FISH AND SKULLS.—A paragraph has been going the rounds of the papers about a fish recently caught at San Francisco em-

hedded in a human skull. It was probably a sculpin, though it is not so stated, and the fisherman a skulking sculler, who in due time, we presume, handed it over to the scullion. But our point is this: That this item should have gone the rounds from California to Pennsylvania simply demonstrates that the average newspaper paragrapher knows very little of natural history. It is nothing at all unusual for fish to inhabit skulls—in fact, there is a well recognized proclivity among the inhabitants of the saline deep to sequester themselves in the cavernous recesses beneath the scaphoid and semi-lunars. This was known as long ago as the time of Milton, who has embodied the belief in his verse as follows:

"Fish that, with their shining scales,
Glide under the green waves in skulls that oft
Bank the mid sea."

We wonder that, while the poet was about it, he did not speculate upon the eternal fitness of things so strikingly illustrated in this curious finny instinct, and, reasoning from the proverbial connection between fish and skulls, or brains which are supposed to be in skulls—

THE IRATE EDITOR AS A NATURALIST.—A suggestive but hitherto unappreciated field of investigation for the student of natural history is found in the leaded brevier of the wrathful Western editor. If the subject of the editorial be a personal one, the reader will in all probability find references to numerous lower and unsavory varieties of the animal kingdom, some of which are not down in the books; and, if the reader be a naturalist, he may, with profit to himself and science, devote himself to a careful study of certain of these creatures. For instance, when the editor of the *Idaho Avalanche* calls another editor a "Piratical Skunk" the student may well ask, "What is a piratical skunk? How does it differ from the ordinary skunk of science, fact and fiction?" A further perusal of the article in question will cast some light upon the characteristics of what we may designate the *var. piraticus* of the *Mephitis Americana*. We learn among other things that this animal—peculiar, let us hope, to Idaho—is inclined to be "bigoted," "prejudiced," "by nature and practice a stranger to those better impulses that are supposed to actuate the better class"—of skunks, and, moreover, upon the presumed theory that each part of the creation has its appointed purpose, this interesting specimen "fulfills his mission in life by revelling in slime and putrescence, and berating all who will not descend to that unholy and debased level which he occupies. That's what's the matter with —" This is all here given of what we may term the diagnosis of the beast; but if the student be enthusiastic he will not stop here; nothing but a personal observation of its habits, together with a stuffed specimen, should satisfy his thirst for knowledge. Let him beware, however, of falling into the error of the good-hearted person who attempted to soothe an indignant byster whom an editor had called "a Texas tarantula" by assuring him that, although he was a tarantula, he was no bigger more than a perfectly harmless spider. We published in FOREST AND STREAM, a year ago, valuable papers showing that the bite of the Texas tarantula is poisonous and dangerous. In his investigations, rather let the student regard only the strictest scientific verity without reference to the personal feelings of the specimens under examination.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

Tennessee State Sportsmen's Association, Nashville, Dec. 2. Sec'y., Clark Pritchett, Nashville, Tenn.
Wisconsin State Sportsmen's Association.
Massachusetts State Sportsmen's Association, at call of President
Missouri State Sportsmen's Association.

MAINE.—Kennebunk sportsmen have organized the Kennebunk Fish and Game Protective Association, with the following officers: Joseph S. Soudus, Pres.; Allen G. Littlefield, Vice-Pres.; George C. Lord, Sec.; W. H. Cloudman, Treas.; Z. M. Cushman, E. M. Dutch, C. W. Stoncy, Executive Committee. The club has an ample field of work, and as it is composed of influential citizens promises to accomplish desirable ends.

CONNECTICUT.—The following very excellent act was passed at the last session of the Connecticut Legislature under the title "An Act in addition to an Act for the Preservation of Game":—

Be it enacted by the Senate and House of Representatives in General Assembly convened:

SECTION 1. No person shall shoot, kill, attempt to shoot, or attempt to kill, any wild duck, goose, or brant, in, on, or over the waters, bays, channels, islands, marshes, mudflats, pondholes, or any part of the bed of the Housatonic river below or south of the bridge across said river known as Washington bridge, and above or north of the beach on which the house of George Smith stands, and a line from the middle of the west end of said beach to the middle of the mouth (south side) of Neck bridge creek.

SEC. 2. Every person who shall violate the provisions of the preceding section of this act shall be punished by a fine of not less than seven dollars nor exceeding thirty dollars, or by imprisonment in a common jail for a term not exceeding thirty days, or by such fine and imprisonment both; and all complaints for violations of this act may be made by any proper officer in either of the towns of Milford or Stratford, and may be heard and determined by any justice of the peace residing in either of said towns of Milford or Stratford.

SEC. 3. This act shall take effect from its passage.

The mouth of the Housatonic River, to which this act refers, has been from time immemorial a favorite feeding ground for

Target No 2, Wrought Iron.—Shot No. 5—Target backed; velocity of impact 1000ft., penetration complete. Shot No. 6—Target backed; velocity of impact 1038ft., penetration incomplete. Shot No. 7—Target not backed; velocity of impact 1038ft., penetration complete. Shot No. 8—Same as No. 7.

Target No. 4, Flange Iron.—Shot No. 9—velocity of impact 1463ft., target slightly indented. Shot No. 10—Velocity of impact 1696ft., complete penetration; a circular button detached from plate and driven with the bullet with considerable force, striking a brick wall in the rear. Target No. 4 was further tested, as follows: Two shots were fired with the same barrel, the ball weighing 250 grains and with 120 grains of powder; two others with the service rifle bullet, 405 grains, and 120 grains of powder. The velocity of the first two was 1714ft., of the last two, 1463ft.; impact of the smaller balls with the greater velocity being the greater; it was, however, somewhat diminished in the latter case by the bending of the plate.

Target No. 2 was still further tested by shots fired at it from an ordinary Sharp and Hawkins boat or cavalry carbine, the distance being 50 feet and the target backed by a white pine post, the ordinary Service metallic shell being used. Neither shot produced more than a slight indentation.

Conclusion.—All the plates yield to the impact of a service bullet driven with the initial velocity of 1690 to 1700 feet—the steel plates by cracking, the iron ones by penetration. The ordinary boat or cavalry carbine does not position with its ordinary charge sufficient powder to effect this work.

EXPRESS RIFLES.

I cannot let "Bear Paw's" letter on Express rifles pass unanswered, as from want of a practical knowledge of that rifle it gives a wrong impression as to its capabilities. In the first place, as to what "Bear Paw" says about so many animals escaping after being hit by other rifles: This is the strong point of the Express, not one animal in six getting away after being struck by it, and fully two-thirds dropping where they stand. I see from my game diary that I have killed twenty-seven buffalo with mine, besides many deer and antelope, and I have not lost a single animal as yet after wounding it. A friend of mine in India killed sixteen tigers in a fortnight, and no one took a second shot, and this peculiarity of the rifle can be confirmed by at least two thousand sportsmen who are using them in India and Africa. They are not recommended for very large game, such as Indian buffalo and elephants, rhinoceros and hippopotamus, but for bears, lions, panthers, and all animals of the kind, they are most deadly. One would think from reading the few letters which have appeared on the Express rifle in this country, that a knowledge of dangerous game shooting with the rifle was in its infancy in India and Africa, and that English sportsmen must come to America to learn how to kill big game, the truth being that that knowledge is infinitely more advanced in the former than the latter, sporting having long been reduced to a science there. Every kind of a rifle has been tried there up to eight-hores, with a charge of sixteen drachms of powder, and it has been found that Express rifles are more immediately fatal to dangerous game than even these could be, always excepting the animals I have named. As to shooting at four, five and six hundred yards, very few sportsmen ever do so, finding that with any rifle much more game is wounded than bagged. As for these distances, an Express bullet has not sufficient accuracy, being too light, but up to 200 yards a .450 Express, using 140 grains of powder, will, nine times out of ten, instantly paralyze any animal in America, even a grizzly bear. I recollect two shots made by a friend of mine in Texas at deer in high grass; they were both struck high up in the back, and in each case a piece was torn out as large as the crown of a "wide-awake" hat, leaving no skin but the skin of the stomach to connect the fore- and hindquarters. The hole in the skin, when taken off, was fully sixteen inches square. I shot a puma in Texas, and the ball striking in the neck blew the whole of the inside of the throat to pieces, leaving only the skin to hold the head on. I have frequently found the inside of a deer reduced to a pulp by an Express bullet. "Bear Paw" says that he found a Sharps bullet flattened out against a bone after passing through every rib of a deer. Now, the difference between the shock caused by this ball and an Express is very great, as the latter when fired into a deer, even into a fleshy part, expands almost at once, and, continuing its course, tears everything to pieces over a large surface, besides small portions flying from it and penetrating all the neighboring organs;—the Sharps ball only expanded when striking the last bone. As to penetration, by having several plungers to one's mould one can make the hollow deeper or shallower, and thus add to or diminish the penetration. I have several times broken the shoulder of a buffalo all to atoms with a common Express ball. The difference between an explosive ball and one on the Express principle is very great. In the former the bullet is blown almost entirely to pieces soon after entering, and thus loses penetration, whereas in the latter the bullet remains nearly whole, the base being driven through the point, spreading it out like a mushroom, and continues its flight in this form, and the damage is simply awful.

As to the "exaggerated statements of the destructive effects of the bullet," if "Bear Paw" or any other American were to go to India and join in one hunt with English sportsmen there, they would not, on their return, talk of gentlemen by birth and education making any such statements. After nine years' hunting in all parts of America I can easily excuse "Bear Paw's" saying this, as the Western hunter cannot tell a hunting story without exaggerating, and really does not mean to tell an untruth in doing so; but the same class does not exist in India. Professional hunters there are none, and I have not found that "gentlemen" anywhere exaggerate. The only reason why an Express bullet cannot be used with equal effect from an American rifle is that no American shell will hold powder enough, 120 grains being, I believe, the limit. As to a longer range than 200 yards being required, this can be obtained in the Express by using a solid ball and smaller charge. In conclusion, if them in all parts of western big game shooting, eight of them have killed over sixty bears in America (during which time I have killed over nearly and three of them in Africa, and after having owned nearly forty rifles of all kinds, I have found no rifle with which I would as soon face a grizzly as an Express.

P. S.—I do not wish to be understood to say that all English Express rifles will do what I have stated in the foregoing letter. "Very few" makers can make them correctly, but any one who goes to such men as Henry, Turner or Birmingham, Rigby, Purdy and one or two others, will not be disappointed.

PURDY BREACH-LOADERS.—At Messrs. Schuyler, Hartley & Graham's, a brace of superb Purdy guns were shown us. They are 10s and 12s, 30-inch barrel, weighing 9 and 7½ pounds. The outfit is complete. More superb guns no one would wish for. In point of finish, in excellence of material, they are unsurpassed. Everybody knows that Purdy is a gun-builder without a rival for care and accuracy, and these two guns are about as good ones, we fancy, as this well-known maker can turn out.

Game Bag and Gun.

GAME IN SEASON FOR JULY.

July is a close month for game, except as to woodcock, in certain States.

NEW YORK LAW.—The open season for woodcock in New York State begins August 1; for quail, Nov. 1; and for ruffed grouse or partridge, Sept. 1.

GAME IN MARKET.—RETAIL PRICES, POULTRY AND GAME.—Game.—Wilson Snipe, \$4 per dozen; wild pigeons, flights, \$1.25; stall fed do, \$1.75; Philadelphia squabs, \$2.50; wild do, \$1.25. Poultry.—Philadelphia and Bucks County dry picked chickens, 18 cents per pound; do fowls, 16 cents; do turkeys, 16 cents; do ducks, 20; do geese, 16; State and Western chickens, 15; do turkeys, 15; do fowls, 15; spring chickens, 20 to 30 cents.

MARYLAND, Salisbury, June 20.—Quail have suffered much by heavy rains. Rabbits more numerous than I ever knew them before.

WEST VIRGINIA.—Near Roncoverte, June 24.—The country around here is full of game. Deer and bear I have seen in the neighborhood.

TENNESSEE.—Savannah, June 18.—The prospect for quail is unusually fine. A much larger area than usual has been sown in grain and quantities of birds were left over this spring. We have had much rain recently, and if this continues it may affect the prospect disastrously.

SPORT IN THE INDIAN TERRITORY.—If variety is the spice of life, a sporting excursion in Indian Territory must be decidedly spicy. Our Indian Territory correspondent, "D. G.," of Muskogee, Creek Nation, writes of a fishing trip to the Middle River, some forty miles west of that station:

"The party of five went in wagon and on horseback, provided with three days' provisions; pitched their camp on the river bank and found the fishing good, beyond the best catch related by the Judge in the numerous reminiscences of sport of former days with which he beguiled the leisure hours of the camp. Warying at length of the unvarying success, the party started for home. The third day out brought an exciting chase, as the dogs started four wolves in plain view across the prairie. They were immediately followed by one of the party. The boys and the portly Judge brought up the rear in fine style, offering fabulous bets first on the wolves and then on the dogs. Five miles of racing, as they doubled and chased over mound and ravine. One bet already lost as Falsdian William was pitched at least twenty feet over the head of his floundering steed. But both recovered bottoms, and again essayed the chase, urged on by the Judge jumping up and coming down in the wagon two miles away. As they circled they discovered the den and captured seven young wolves, which now grace the Zoological Garden of St. Louis. Several times the wolf was overtaken, when he would double, and again the chase would be resumed, until after one hour's hard riding, between wolf, dogs and men, the former was killed and brought in as a trophy of the chase in the beautiful Indian territory.

IRA A. PAINE.—Mr. Ira A. Paine has entirely recovered from his recent serious illness. He played at the Opera House, Providence, all last week to good house, and returns to play for the benefit of the managers on Friday evening next, when he will undertake to load his own gun and break nineteen glass balls in one minute. The old Narragansett Club had a gala day last Thursday on the occasion of the visit of Mr. Paine to his native city. Two hundred and fifty pigeons were shot off at English rules, 30 yards, and 300 feather-filled glass balls, after which, there being plenty of loaded shells left, bottles, barrels, chairs, baskets, table-legs and then the table, all in hand, until the last shell was gone, when the party all adjourned to a clam bake. What followed, never mind, but we all wished Greene Smith was there.

A TRIUMPH FOR CAPTAIN BOGARDUS.—The following has been received by telegraph:

London, June 28.—The pigeon-shooting match between Captain Bogardus, the champion of America, and Mr. Cholmondeley-Pennell, member of Hurlingham Park and Gun club and winner of the Grand Prize of Monaco, took place to-day in the Gun Club enclosure upon Wormwood Scrubs. The terms of the match were: To shoot for \$1,500 a side at 100 birds; thirty yards rise; from five traps five yards apart; double guns and 1½ ounces of shot. Captain Bogardus won the match, killing 70 birds out of the 100, while Mr. Pennell killed 68.

This is indeed a very notable performance, when we think that the birds were the most vigorous blue-rocks, and sprung with ground traps. We have to congratulate Captain Bogardus on his victory.

WILD RICE.—We have had numerous inquiries in regard to wild rice. A letter from a correspondent throws a good deal of light on the subject. We have asked "Lutron" if he will give us the name of any one who would gather and sell the seed. Our correspondent, writing from St. Joseph, Mich., under date of June 21, says:

The wild rice grows here at the mouth of the St. Joseph River in the marshes and bayous in abundance; there are hundreds of acres. It is found in plenty around most lakes and rivers with mucky bottoms; grows in water from a few inches deep to two feet or more; height, three to seven or eight feet. The seed ripen in September and fall very readily when the ear becomes full, before it hardens much. It drops into the water and does not sprout till the last of March or first of April. The husk runs to a long serrated point, so that when it falls into the water the weight of the berry sinks it immedi-

ately to the bottom with the germ end down. The action of the water on the long point hurries it in the hottest mud by the aid of it aerates, and nature does its season's planting in the fall and sleeps till spring. About the first of May it is well sprouted and rootlets put out, and it is the food of ducks and other wild fowl. It grows slowly till it reaches the top of the water. The leaves lie flat on its surface for quite a length of time and then rise up and begin to grow rapidly about the first of July. Where the water falls so as to leave stocks ten or twelve feet high. The object of writing this article was to give an opinion as to the time of planting it. Now, as the stalk does not ripen or the seed harden till the seed falls into the water, will the seed grow if it gets dry? I have supposed that it would not; yet I do not know. I have gathered and sent a short distance only—thirty or forty miles—and it was very particular to send it as fresh as when gathered, and was immediately planted. I will now make suggestions to my brother sportsmen how I think they can obtain this attractive wild fowl food and make its growth a success: Oather it and keep it from drying; sow in from one to two feet of water on muddy bottom (grows poorly or not at all on sandy bottom). If not dry will plant itself in the mud. It must not be in quantity enough to heat before it is planted. I have thought, perhaps, that it might be gathered and put at once in the water and sent in barrels or smaller casks, if not kept long water and sent by fermentation. I would try it, enough to kill the germ by fermentation. I would try it, however. Once got it started, and I think it might keep growing in a marsh. It is an annual, and it is doubtful whether birds or water fowl would get all the seed. Blackbirds are very fond of it, and begin to feed on it while in the milk; in fact, it hardly gets out of the milk before it falls into the water. I think some party here might gather some. If any sportsmen wish to get any they must seek to get it by the first of September, at least. The seed can only be gathered a few days.

THREE FINE GUNS.—Mr. H. C. Squires, of No 1 Courtland street, has them. One is a 10-bore Purdy, eight pounds weight, elegantly finished in every particular, in best black sole-leather case, with full set of implements. This cost import it \$550. It was built last year, and has all the latest improvements. The second beauty is a Premier Scott. This is as choice a gun, and was built for the Centennial Exhibition. No Scott gun which ever came to this country cost more or was finer. Best case and implements go with it, and the gun has never been used. The third gun is an excellent little 20-bore Greener. Its weight is six pounds, and is one of the best pieces of work made by this celebrated maker. It has the treble-wedge fast, one-half pistol grip, large gilt strikers. The left barrel is bored to make a pattern of 176 inches, 30 inch circle, at 40 yards, with 1½ oz. No. 6 English shot, and right barrel, with same charge, 120 pellets. Any one of these guns is worthy of a visit.

THE OLD-FASHIONED FOWLING-PIECE.—Sixty years ago, when young Colquhoun took the field—a schoolboy under the care of a keeper, and staggering under the unaccustomed weight of a rudely primitive piece of ordnance—we fancy that the venerable flint-locked single-barrel was in fashion. The author of the Oakleigh Shooting Code, writing many, many years ago, concedes certain merits to that exploded weapon. He says that it made steady and deadly shots, because knowing that you had but a single chance, you were constrained to dwell deliberately on your aim. Those flint and single-barrels may have been sure, but they were abominably slow. The woodcock would have dipped under the bough and twisted away behind the tree-trunks while your fingers were fumbling with the lock and the charge was in the course of kindling. The rabbit jerking across the ride, or the grouse cock topping the crest of the brae, would have laughed at the beard of the baffled shooter. No; the single-barrel was emphatically the weapon of the old school, and must have bred a race of potterers who would prematurely develop into fogies. A vast stride was made in advance with the introduction of double-barrels and percussion-locks. Then Joe Manton and his less famous rival Stevens attained, according to their lights, to the perfection of finished workmanship. Currier lights, to the perfection of their lively "diamond-grain," (is and Harvey followed with their lovely "diamond-grain," and Elcy with his caps and wired cartridges. Given tolerable weather, and but a fair sprinkling of wild game, and the shooter had good reason to be content with the readiness of his new fangled tools. But there are occasionally dripping days to the north of the Border, and then to what misery and provocation that painful muzzle-loading used to lead! The wader in your open pocket worn saturated, and bulged when you thrust them into the barrels. The powder half choked the damp measure in the mouth of the flask. The slender ramrod bent and sometimes broke, when you were cramming down the reluctant charge in a series of frantic contortions; and it was a god-send when it was replaced by the more substantial loading-rod. Above all, the best barrels would hang fire, and then you were placed hors de combat till you had cleaned the touch-hole and replenished it with dry powder in the drip of a driving rain. That, with the nuisance of seeing birds getting up about you before you had reloaded, and were ready to drop them, might have been admirable discipline for the patience which should be one of the fundamental virtues of the sportsman. But too often your temper flashed up when the powder refused to burn, sending you on your way sulking and shooting wildly; and altogether there was great reason for thankfulness in the introduction of the swift and simple breech-loader.—*Blackwood's Magazine.*

BELL BALLS.—A San Francisco genius has invented a "bell ball" which takes the place of the glass ball. Every time the bell ball is hit it rings, giving a clear and distinct note distinctly heard at the distance of 800 yds.

For Forest and Stream and Rod and Gun. WOODCOCK SHOOTING ON THE UPPER MISSISSIPPI—No. 1.

By T. S. VAN DYKE.

Of all the sport to be had with dog and gun in the glorious game section of the Northwest, there is nothing equal to the woodcock shooting that may be often had by one who knows just where to go. But one not accustomed to western grounds may hunt several days and give up in disgust without hearing the twitter of a single wing.

A small skill, containing two men and two dogs, is winding up one of the numerous sloughs that run through the "bottoms" of the upper Mississippi, where it divides Minnesota from Wisconsin. Let us follow them. One of them,

On reaching the point Spot is seen a few yards off braced in Arctic firmness by the side of an old log, overgrown with grass and weeds. His tail trembles at the tip like an open, his four feet are almost together, as if he had just thrust himself to spring over the log, and his head is turned short to one side. His whole body is as motionless and stiff as sculptured marble, and far handsomer, and his eyes are glazed in a stare of monumental importance. In front of him sits a woodcock, with head and long bill sticking out from one side, and the mud on the long bill looks just like what we saw on a woodcock's bill a moment ago. Yes, the same bird, only winged. He sits in the dog's mouth apparently as unconcerned as before. The deep, liquid,

the shooting now becomes much more exciting. So many birds have run into this strip of brush from the reedy areas of the adjoining ponds that one of the dogs is on them, or backing the other nearly all the time. The cock too, in all sorts of ways. They are all full-grown, strong and active of wing, and know right well how to use it. Here one wheels suddenly out of the outer edge of the brush, twists away upward to the level of the tree-tops, and scuds away over them; another bounces right up into the thick foliage and then skims away on a

I would go down, get behind a tree and give them one barrel in the water's edge. In shooting teal, the range was as far as 4 rds. powder, Orange No. 5, as now it is not usual to shoot any kind of duck: I wanted quantity not size. A single shot would be all right. I could whistle from 100 yds. and the ducks would fly to me. I would shoot them with one barrel and give them another fifteen or twenty mornings with both barrels. I would shoot at any one visit to the pond. Any one visit was twenty-sixteen shots. I would shoot mallard, bobolink, and quail. During the winter I would shoot at any one visit to the pond. I saw. One day I was returning from a large duck in the pond.

TREE-FELLING MACHINE.—An English firm has invented a tree-felling machine, and at a recent series of experiments to test its power Mr. Gladstone was present:

The tree-feller had been operating before his arrival, a row of oaks and elms which lay on one side of the meadow attesting its capabilities. When Mr. Gladstone reached the scene, the tree-feller was carried to the base of a solid young oak, between two and three feet in diameter. All the fixing it received was a man thrusting a crowbar into the ground behind to steady it; while a second steadied the saw blade at the free end with his hands until a few strokes gave it a bearing in the trunk of the tree, just clear of the ground. The operation of the saw blade was precisely analogous to that of a carpenter using a ripping saw to cut a sapling close to the ground. In four minutes after steam was turned on the tree fell, and a measurement of the section gave a diameter of three feet one inch in the widest part, and two feet three inches in the narrowest.

Mr. Gladstone watched the process with a critical eye, and declared that he had never most interested, but that the machine was susceptible of larger application in other countries than in this, Scotland even offering a better field for its operations than England. On being asked by a bystander how long such a tree would take an expert woodcutter to fell, he said he thought it would be very nearly a day's work; but on this point he consulted his son, who seems to have inherited the paternal taste for felling timber. The honorable member for Whitby did not think it was quite a day's work. Then Mr. Gladstone explained to a little circle of interested auditors, in response to queries, or by way of comparing notes with one or two experts among them, that from the kind of the labor six hours' continual wood chopping was a very good day's work. There would be great economy of timber from the use of the machine, as it cut close to the ground; whereas a man must have "face" of at least a foot. His own experience was that oak, though very hard, was not a bad tree to cut, for the grain broke off easily, and did not cling to the axe. Beech was far tougher, that and ash being the two most difficult to fell of our English trees on account of their bending to the axe. Ash was subject to fracture in felling, and he had a splinter of ash that had broken off in this way, in his own experience, two feet eight inches in length. The pleasantest timber to cut was Spanish chestnut, because it came away so freely, the grain breaking easily. Yew was the most horrible thing to cut of all forest trees. Of holly he had no experience beyond a specimen twenty inches in diameter.

AMERICAN TEA.—Recent experiments at the Government Department of Agriculture at Washington would seem to show that we may cultivate as good tea in this country as can be imported from the Flowery Kingdom. Two veteran tea importers of Baltimore, who have spent some years in China were thoroughly acquainted with all the varieties of the tea plant, and the methods employed in curing it, were invited to experiment with the plants at Washington, and the result is thus printed in the *Washington Post*:

"The leaves gathered were the young tips, two or three only being taken from the top of each plant. They were then carried to the laboratory and turned over to Messrs. Gill to be cured. They began operations by placing a portion of them in a sieve and holding it over a pan of boiling water until the leaves were thoroughly wilted. They were then put in a thick cloth and subjected to a heavy pressure to express the juice or sap, which contains a large quantity of tannic acid. When taken from the cloth they formed a solid mass, very glutinous, and somewhat difficult to separate. In this stage the leaves can be made to assume any shape desired, and it is when they are in this condition that the Chinese make them up into the different brands, like gunpowder, imperials, etc. After having been thoroughly separated, the leaves were next 'fired.' This was done by placing them in a tin pan over a gas fire, taking care not to permit the bottom to get hot enough to burn, and gently stirring them with the hand until perfectly cured. When the process was complete, the tea was of a deep green color, and resembled very much Chinese Oolong, or a Japan tea, such as is used by the natives of those countries. In appearance, it compared very favorably with a sample, shown by the Messrs. Gill, which cost \$3 per pound in Japan. The whole process did not take an hour from the time the leaves were first plucked, and so soon as boiling water could be procured tea was made and presented to the ladies and gentlemen who had witnessed the experiment. It was pronounced excellent, the experts present saying that the flavor was between that of a high grade of Japan and the finest Moyune China green teas."

DISEASED FISH.—Any one who has seen the graceful snout of a salmon or a trout, especially if he has looked upon it after an hour's exciting spin on a river or Highland loch, will be filled with disgust and, if an angler, with grief, on beholding the horrible

head of a smolt figured in the *Gardener's Chronicle* of May 4. It is positively loathsome. And this is the effect of the disease which has been proving so destructive to the helpless creatures in some of the North-western rivers, especially the Esk, Eden, Kent, and even the Tweed we believe. Mr. Worthington Smith has been making some inquiries into the nature of this disease which is killing not only salmon and trout, but eels, flounders, and other fish. He finds it to be a fungus (*Saprolegnia ferax*), which attacks mainly the head, tail and fins. The scales appear to be covered with a fine white cottony bloom, which at length blinds the fish, envelops the gills, or even entirely closes the gills and mouth. Mr. Smith thinks the reason for the extraordinary abundance of the fungus this year is the unusual mildness of the winter. It seems only to attack the fish in fresh water, those in the estuaries escaping. We trust for the sake of our food supplies as well as on account of our genial friends, the anglers, not to mention the poor fish themselves, that some means will be found of preventing the spread of the disease.—*Nature*.

A NOVEL RUDDER.—The commander of one of our immense ocean steamships must be a man fertile in expedients. The National Line steamship *Denmark*, on a recent voyage from England to this port, when 1,320 miles from New York was struck by a heavy gale, and her rudder carried away. This is what Captain Williams did:

"He first used a drogue, employing for the purpose sixteen feet of spar bound astern by a fourteen-inch hawser, which was worked with the guys through the sheaves on the arms of the main-top-sail-yard, which was placed athwart the quarter-deck. After this had been arranged the ship was brought to the wind and made headway at full speed. When off Shinnecock light, on the 22d inst., they were spoken by a White Star Line steamer, which reported them at Sandy Hook. Meantime, for narrow sea sailing, Captain Williams devised a new steering apparatus. He cut away two iron sidley gates, strapped them together and backed them with wood. These he lashed to a spar which, by means of a derrick, was held in position. Lines were run from it to the ends of the maintop-sail yard, placed as before, and then carried to a winch with port and starboard drums, by which the spar could be worked as a rudder and serve its purposes. By means of this contrivance the *Denmark* was able to make nine and a half knots an hour from Shinnecock to the light-ship, end came up the bay till taken in tow by tugs."

A PATENT FISH BASKET.—The best part of some stories comes at the very end. For that reason we give only the concluding paragraph of a Sandy Hill, N. Y., yarn:

It's tiresome work following a brook, and thirsty. Toward night, by the time they had reached At. Bahcock's, William was nearly parched; so he got over the fence into B's yard, started for the well, meeting At. "What luck?" said At. "Good," said Bill, "got thirty nice ones—I'll show you," and he carefully undid the cover and looked into the wicker. As he did so his eyes expanded, his chin dropped and a look of bewildered astonishment overspread his features. It was marvelous! And "still he gazed and still his wonder grew" at the sight—nothing but a few chips, a small hard-head and a piece of broken rail to be seen—not a fin of fish! Raising his head he slowly repeated in a wondering voice: "Chips, stones, piece of rail. It beats the devil!" Bahcock approached the basket, looked in, burst into a laugh and thrust his hands clean through it. C. had been gazing through that basket at the chips, etc., upon the ground. All day long, with job-like patience, had this weary fisherman trudged beside and through the brook, catching "thirty nice ones" and depositing them one by one upon the ground, through the basket. After a time Liakum came up. There was a smile upon his face, for he had a good string. He had been following behind William.

DRESSED FISH SKINS.—In the Japanese exhibit at the Centennial, the prepared skins of the shark and sturgeon were very remarkable. The former are much used by the Japanese as handles for their swords, and the skins of the sturgeon for various ornamental purposes. The preparation of the sturgeon skins was remarkably beautiful, the difference of coloring being of the most artistic character. At the Paris Exhibition, Norway will send fish skin gloves, eel skins prepared for harness, with shark skins ten feet long and three feet wide, with whale skins sixty feet long, which can be used for driving bands.

—A child's bed should slope a little from the head to the foot, so that the head may be a little higher than the feet—but never bend the neck to get the head on to a pillow. This makes the child round-shouldered, cramps the veins and arteries, and interferes with the free circulation of the blood. Even where a child is several years old the pillow should be thin, and made of hair, not feathers.

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of **Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware** for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

UNION SQUARE, NEW YORK

APOLLINARIS

NATURAL

Mineral Water.

HIGHLY EFFERVESCENT.

APPROVED by the *Académie de Médecine* of France, and its sale in France authorized by special order of the French Government.

Recommended by the highest Medical Authorities in New York as:

"A great relief for seasickness."
"A delightful beverage."
"Far superior to Vichy, Seltzer, or any other."
"Most grateful and refreshing."
"Absolutely pure and wholesome; superior to all for daily use; free from all the objections urged against Croton and artificially aerated waters."
"Impregnated only with its own gas."
"Useful and very agreeable."
"Healthful and well suited for Dyspepsia and cases of acute disease."
"Mildly acid; agrees well with dyspeptics, and where there is a gassy diathesis."
"By far the most agreeable, alone or mixed with wine, useful in Catarrhs of Stomach or Bladder, and in Gout."

"Not only a luxury, but a necessity."
To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and wholesale of

Notice.

DR. W. F. CARVER,

OF CALIFORNIA,

Champion Rifle Shot of the
World,

will give an exhibition of his wonderful

GLASS BALL SHOOTING WITH WIN-
CHESTER RIFLE,

AT

BROOKLYN DRIVING PARK,

(Late Deerfoot),

BROOKLYN, N. Y.,

JULY 4, 5 and 6,

Commencing at 3 o'clock P. M. Each Day.

DR. CARVER is the originator of Glass Ball Shooting with a rifle, and has no equal in the world as a rifle shot. At New Haven, Conn., June 12, over 5,000 people witnessed his exhibition. During his recent tour across the Continent he has exhibited before upwards of 60,000 people. Before leaving New York he will undertake an astonishing feat of endurance and skill—that of breaking 5,500 glass balls, thrown into the air, in 500 minutes, with a Winchester Rifle.

ADMISSION, 50 cents. BOYS, 25 cents.

FLYING TARGET.

(Patented August 7, 1877, No. 193,519.)

The way it came to pass was this: I to a sporting club belong; I love to shoot; I love to see the long-bill tottling to the coope from whence 'twas flushed, or in its whirling flight the goodly grouse come swooping to the ground, and hence to make myself proficient in the manly sport, I joined the club, and practiced at the gyro, glass ball, and the living bird, and as a substitute therefor the CHEAPEST and the BEST, the Flying Target, I've contrived. For information, if you wish, or for a trap, address

Painting.

PAINTING.

EVERY ONE THEIR OWN PAINTER.

50 Per Cent. Saved.

We are manufacturing a very fine Pure Ready-Mixed Paint, mixed in such a manner, that any ordinary staid or farm hand can make as good a job painting as a painter can with paint mixed in the old way. This is because our paint does not set quick, and thus show marks of the brush. We sell it lower than materials can be bought in the ordinary way, and we can be bought in the ordinary way.

Any one wishing to Paint, will have melted free, upon application, our book "How Every One can Paint and Select Harmonious Colors." Address INGERSOLL PAINT WORKS, South and Dover streets, New York.

Gunpowder,

GUNPOWDER.

American Powder Co.

233 STATE STREET,

BOSTON, MASS.

GENERAL WESTERN AGENTS.

R. B. RAMBO, 14 State street, Chicago, Ill.
F. G. GODDARD, 304 North Second, St. Louis, Mo.
M. BARK & CO., 41 Walnut st., Cincinnati, O.

Lafin & Rand Powder Co.

No. 20 MURRAY ST., N. Y.

Sole Proprietors and Manufacturers of

Orange Lightning Powder.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. cans. Higher numbers especially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6 1/2 lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFGG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs. and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World," in his "BLASTING POWDER AND ELECTRICAL BLASTING APPARATUS. MILITARY POWDER of all kinds on hand and made to order.

Safety Fuse, Frictional and Platinum Fuses.
Pamphlets, showing sizes of the grain by wood cut, sent free on application to the above address.

THE HAZARD POWDER CO

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

No. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

No. 1 (fine) to 5 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

No. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean. Shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFGG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFGG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

This above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

English Sporting Gunpowder.

CURTIS & HARVEY'S

DIAMOND GRAIN.

No. 2, 3, 4, 5, 6, 7 and 8. Superior Rifle, Endell Rifle, and Col. Hawker's Ducking. W. STITT, 31 Cedar street, N. Y. Agent for the United States.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it can be put out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12 calibre—calibre of rifle 32, 38, or 44 as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1873. Send for a Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,

P.O. Box 1,178.

NEW HAVEN, CONN.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 86 birds out of 100, being one barrel only.
The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 163,323. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's Works, Birmingham, England.

Hart's Sportsman's Favorite Metallic Shells. FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any Shell now made, giving a solid seat for cone or anvil, which prevents head from driving through or springing away, thereby causing misfires. The Cone is made of nickel, and fast in its place. Neither rusts nor corrodes fast like movable anvil made from steel. The Nickel cone also prevents misfires when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These Shells are finely finished, and made in full sizes ordered, from 2 1/2 to 3 1/2 inches. Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Monarchs HART & SLOAN, Newark, N. J. throughout the country.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA.
Messrs. GEORGE E. HART & CO.—Gentlemen: The fifty Shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter.
Yours truly,
A. H. BOGARDUS.

Sportsmen's Routes.

Chesapeake & Ohio RR

The Route of the Sportsman and Angler to the Best Hunting and Fishing Grounds of Virginia and West Virginia.

Comprising those of General and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, and Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc., etc.

Guns, fishing tackle, and one dog for each sportsman carried free.

The Route of the Tourist

through the most beautiful and picturesque scenery of the Virginia Mountains to their most famous watering places and summer resorts.

The Only Route via White Sulphur Springs.

Railroad connections at Clifton with the West, Northwest and Southeast; at Oronoco with the North and Northwest; and at the mouth and Charleston with the South. All modern improvements in equipment.

CONWAY R. HAWARD,

Gen. Passenger and Ticket Agent, Richmond, Va.

sp

FOR NEW HAVEN, BARTFORD, SPRINGFIELD White Mountains, Mount and intermediate points. The new and elegant steamer Continental leaves New York, N. Y., East River, daily (Sundays excepted) at 3. A passenger train will be in waiting at the wharf at New Haven and leave for Springfield and way stations on arrival of boat.

NIGHT LINK—The Elm City leaves New York at 11 P. M., connecting with passenger train in waiting at New Haven, leaving 6:15 A. M. Tickets old and baggage checked at 9:45 Broadway, New York, and 4 Court Street, Brooklyn. Excursion to New Haven and return, \$1.50. Apply at General Agent, on the pier, or to RICHARD PECK, General Agent.

CHICAGO & ALTON RAILROAD.

THE ONLY DIRECT RAILROAD from Chicago to St. Louis, and Chicago to Kansas City, WITHOUT CHANGE OF CARS.

FIRST CLASS ACCOMMODATIONS IN EVERYTHING.

SPORTSMEN will find splendid shooting on the line of this road: prairie chicken, geese, ducks, brant, quail, etc. Connects direct at Kansas City with the Kansas Pacific Railroad for the great Buffalo and Antelope range of Kansas and Colorado.

Liberal arrangements for transport of Dogs for Sportsmen.

JAMES CHARLTON,

General Passenger Agent, Chicago, Ill.

Wild Fowl Shooting.

SPRINGVILLE HOUSE OR SPORTSMEN'S RESORT, SHINNCOCK BAY, L. I.

By a practical gunner and an old bayman. Has always on hand the best of traps, batteries, etc., with the largest rig of trained wild-geese decoys on the coast. Special attention given by himself to his guests, and satisfaction guaranteed. Address WM. N. LANE, Good Ground, L. I. Nov 17

THE SPORTSMAN'S ROUTE.

Chicago & Northwestern R.R.

Embraces under one management the Great Trunk Railway Line of the West and Northwest, and with its numerous branches and connections, forms the shortest and quickest route between Chicago and all points in Illinois, Wisconsin, Northern Michigan, Minnesota, Iowa, Nebraska, California, and the Western Territories. Its

OMAHA AND CALIFORNIA LINE is the shortest and best route for all points in Northern Illinois, Iowa, Dakota, Nebraska, Wyoming, Colorado, Utah, Nevada, California, Oregon, China, Japan and Australia. Its

CHICAGO, ST. PAUL AND MINNEAPOLIS LINE is the shortest line for Northern Wisconsin and Minnesota, and for Madison, St. Paul, Minneapolis, Duluth and all points in the Great Northwest. Its

WINONA AND ST. PETER LINE is the only route for Winona, Rochester, Owatonna, Mankato, St. Peter, New Ulm and all points in Southern and Central Minnesota. Its

GREEN BAY AND MARQUETTE LINE is the only line for Janesville, Watertown, Fond du Lac, Oshkosh, Appleton, Green Bay, Escanaba, Negaunee, Marquette, Houghton, Hancock and the Lake Superior country. Its

FREESPORT AND DUBUQUE LINE is the only route for Elgin, Rockford, Freeport and all points via Freeport. Its

CHICAGO AND MILWAUKEE LINE is the old Lake Shore route, and is the only one passing through Evanston, Lake Forest, Highland Park, Waukegan, Racine, Kenosha to Milwaukee.

PULLMAN HOTEL CARS are now running regularly between Chicago and Council Bluffs, on the California Express.

CHICAGO & NORTHWESTERN RAILWAY. West bound, they leave Chicago daily, except Sunday (and on every third Sunday), from the Wells Street Depot, at 10:30 A. M., and arrive at Council Bluffs next morning.

East-bound they leave Council Bluffs at 6:30 P. M., daily, except Saturday (and on every third Saturday), and reach Chicago next afternoon.

No other route west of Chicago runs Pullman or any other form of Hotel cars.

TO SPORTSMEN.

This line presents peculiar advantages. For prairie chickens, ducks, geese and brant shooting, our Iowa line to-day offers more favorable points than any other road in the country, with deer and bear hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel and Bass fishing, a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by anything in the West.

COLLIE.

Selected.

OLD Shilways, up! You harrow your track
As if every muscle had gone to rack;
Ho, Sirrah, see that chuck on the knoll!
Time was when you'd cropped him atop his hole.
Ah, collie, it's over; you've had your "day."
Death whistles, and you must hobble away!
Fat chuck, you're safe; keep end as you are,
My collie can't focus a barn so far;
Black blessed, he's old, and it hurts my soul
To see him blink toward the chuck on the knoll.
What! a touch of youth those bones still feel!
Down, plucky tyke, settle back to my heel:
Back, fellow, back! Death's calling, I say;
He whistles you off another way.

This is the last time I shall bless
His poor old patient shagginess.
The rhythmic beating of that tail,
No wonder it at last must fall;
He thwacks it feebly, less and less—
Spent pendulum of pleasantness.
The humor of that hairy handle,
Pumpkin joy into this world of jangle,
As though two hearts took turn about,
One thump inside, and then one out;
Pacifist gesture (mercy's plan)
Betwixt the animal and man!
Up, fellow, up—begone, I say—
Dead! yes, the old dog's had his day.

He's happy in some sort of heaven;
With him that watched the sleepers seven,
And thousand sainted Towzers there,
He trias it in the fields of air.

—JOHN VANCE CHENEY in *Harper's* for July.

Black Bass Fishing in Florida.

I WAS idling away the delightful, sunny February days at San Mateo, on the St. John's River, Florida, eighty-five miles south of Jacksonville. The rainy season was over, or had not begun; the sun shone each day with undimmed brightness; there was occasional light morning frost that showed on the mule heaps, and the weather was as delicious, late spring days, as any heart could wish. I was the guest of a generous, whole-souled friend, Capt. L—. He was busy building a new house and clearing a wide space of hammock land for a great orange grove. I put in my time wandering about among the workmen, in the fields and orchards and woods; occasionally varying the programme by a few shots at squirrels and quails that fairly invaded the village, or by a sail on the placid river. There were plenty of oranges, lemons and limes yet in the orchards, and strawberries were beginning to ripen in the gardens. On the wharf there was a large fruit depot and packing house; shad fisheries just below and above town. From twenty to thirty steamers per day passed up and down the river, so that, although but a rural, scattered village, it was not lonesome by any means. At length, on a Saturday, the Captain announced that his work was now going on so that he could run away for a few days, and, if I were willing, would start up the river Monday morning to catch some trout. Nothing could have pleased me better, and preparations were begun at once. The Captain invited four of his neighbors to join us. On Monday morning his pretty little steam launch, the Grace Darling, was backed out of the boat house, wooded and provisioned, but it was after noon when we got away. Six captains and no crew make slow work. The Grace Darling is twenty-eight feet long and six feet beam, built of cedar, copper fastened, trim as a clipper, with two-horse boiler and engine, and equipment complete. Ballasted for her best speed she draws thirty inches of water, and that and her unhoused screw are the only possible objections to such a boat as the *ne plus ultra* for sport in all the Florida waters. Shallow water and the great profusion of aquatic plants often keep her off shore and out of creeks, lagoons, ponds and lakes where the sportsman would like to go. For this reason we towed a skiff, and that seriously impeded our progress. The route was up the river to great Lake George, to fish in the wonderful springs that flow into that beautiful sheet of water. Tide and wind were against us, and instead of reaching Salt Spring (some fifty odd miles) before night, darkness caught us plowing through the white caps of Little Lake George. The Captain fired and ran the engine. My task was at the tiller. The others amused themselves in shooting at the countless water fowls that are all the time skimming over the river, or darting in and out of the dense forests on either side. Occasionally we came near enough the bank to enable them to pour a broadside into an alligator, who was taking his siesta on a floating log or on a little hammock of earth that rose above the water. As dusk settled down the gunners had fine sport dispersing the vast flocks of turkey

huzzards that had settled down upon the spreading tops of ghostly old cypresses for their night's roost. Although there was half a moon the night proved dark. Extensive fires were burning back in the pine openings of the high land, from which dense smoke filled the air like a thick haze. Good camping places are not universal along the St. John's. The banks are mostly submerged, and the shores are lined with fallen timber and cypress knees, and it is dangerous running a boat ashore in unfamiliar places with the heat of daylight. The islands, which are numerous, are worse than the mainland. For every mile of dry land there is ten miles of swamp bordering the stream, from head to mouth, except perhaps, in the driest season of the year. We felt our way tediously in the darkness, searching for a landing. It was long after dark when the whistle was answered by a light that came slowly out along a thousand-foot wharf on piles that led from the just-begun village of Georgetown to the steamer channel. Under its lee a good anchorage was found, and we camped on the porch of the post office, which had been completed that day. The next morning, heading up through the middle channel, with Drayton Island on the left and Hog Island on the right, we soon encountered Big Lake George, a beautiful sheet of water sixteen miles long and half that in width. Myriads of ducks and other water fowls were resting upon or skimming over its surface, but the season was late for good shooting or the best birds. Once, years before, when I sailed through this lake in December, birds fairly covered its surface, and rolled back right and left in advance of the steamer like great black waves.

Entering the lake at its lower end, and rounding a promontory on the right, we headed for the inlet of Salt Spring, marked by a leaning palm in the middle of a long rank of those trees that fringe the shore. There is a bar just outside the mouth, over which we had to lighten by dividing cargo with the skiff. Then we steamed over and into the stream, laying the boat handsomely in a little cove just within the mouth, where the shelter was perfect. The wind was piping up again, and Lake George is not to be despised in even a moderate gale. The water is shallow, and gives a sea so rough that the largest of the river boats often have to lay by at its head or mouth and wait for better weather. A little side-wheel steamer, the Erie, was lying at anchor just outside the bar when we arrived, and we soon learned that she was under charter by a party of Virginia gentlemen who were hunting in the neighborhood. We camped on the point under the palms, and the captain and myself set out with the skiff to explore the stream, with a faint hope that we might be able to take the launch to its head. The creek is from seventy-five to a hundred feet wide for the first two miles above its mouth, winding through groves of palm and live oak and meadows of very tall grass and rushes. The channel is empty deep, and the current strong, but so filled with eel grass, reeds and rushes that a screw cannot possibly work. At the end of two miles we gave that up and turned back for dinner. The captain suggested trolling for trout as we went down, and I threw out a "spinner;" soon had a strike, and hauled in a two-pound black bass. I recognized the fish and the peculiar odor of the bass as soon as he came over the side of the boat, though I had not caught one for more than twenty years before. The channel was so tortuous and the vegetation so much in the way, that we caught no more on the way down. At the camp they had caught some bream, or, as I learned to call them when a hoy, sun-fish, which with the bass made us a dinner.

After dinner three of us again started up the creek in the skiff. At the end of two and a half miles we found open water; a stream from three hundred to six hundred feet wide, and much of it of great depth, with a gentle current and water of crystal clearness. I was generously awarded the place of honor, and began trolling; first with two lines, but soon found that one gave all the work I wanted. The spinner was allowed to trail from thirty to fifty feet astern, but often it would be taken almost as soon as it struck the water. I hauled in fish of from two to four pounds weight literally as fast as I could handle my line, take them off the hook and kill them. It was another two miles from where the sport began to the head of the stream, and before reaching there I had fifty or sixty pounds of fish lying at my feet. I gave up the line, took an oar, and trout (bass) fishing had no more attraction for me in that stream. (Almost everybody in that region call them trout.) The others caught a few, after which we went ashore and walked up a dim wagon trail to the top of the ridge, through an extensive but abandoned cotton plantation. On the other slope we went down to Lake Churchill, which stretches away out of sight in the then smoky condition of the atmosphere. Returning we caught several fish, and wasted a good deal of time shooting at ducks, which very strangely always managed to disappear. At length a couple were killed too dead to dive, and we found that they were all coots. We heard the Virginians' houn's laying in the scrub, and became aware that a high wind was blowing. When we reached the camp the Erie was in distress. The gale was slowly driving her directly ashore, and her captain was storming worse than the wind, trying to get his sportsmen and their "cracker" beaters and dogs aboard so he could run for shelter or sea-room. But they were indifferent alike, and the captain had to take it out in swearing. Fortunately, as darkness came on the wind went down, and ere long all was peace and quiet. We took possession of a hut for the night that was built entirely of palm

leaves; the framework and rafters of the stems, and the sides and roof of the leaves themselves.

The next morning the Virginians invited us to join them on their deer drive, but our party all wanted to visit the great spring—some for the first time and others again. We pulled up speedily to the trolling ground, and again caught fish as rapidly as the day before. The bed of the stream is mainly covered with a luxuriant growth of grass and other plants, many of them exceedingly beautiful, looking like trees and shrubs and thickets of coral. But among this arborescent growth there are wide openings, or rather a pavement of shells of snowy whiteness. As you float over the crystal surface the scene is surpassingly and indescribably beautiful.

At the head, about the great springs, the water is filled and choked with enormous canes and rushes and gigantic water ferns, but the Captain and I, taking the boat alone, at length pushed and worked our way through it and to the main springs themselves, in a semi-circular cove of the high ridge, overhung by live oaks and other trees, all heavily draped with Spanish moss. The water comes up in immense boiling fountains through fissures of coquina rock (cemented shells). The largest opening is of irregular, star-like shape, apparently fifteen or twenty feet in diameter. It was impossible to hold the boat over the boil. Several other springs are nearly as large. Scores of fishes were sporting in the impetuous current to its very bottom. The others walked around the shore near to the spring, and all were given an opportunity to explore them. Not a trickling stream comes from beyond. A very river boils up from the earth in this one place. The water is quite salt, about 70 degrees temperature, and transparent as the air itself.

One of our company, Captain S., had a very fine trout rod, with which he had whipped Northern streams for many a day. He would not be content without trying it on the bass, against the advice of all the others. He played and landed two very handsomely. The tide was a big and gany fellow, and when the captain thought the battle was almost over and was chuckling over his success, the fish made a dart under the boat and in a twinkling the Captain's rod was converted into toothpicks. Going down we hauled in half a dozen more fish, worried the coots a little, and reached camp just as our neighbors of the Erie came in with their game—two fine Florida deer. We invited them to dinner and grog; sent aboard a couple dozen bass as we had done in the early morning. They gave us half a deer. Our captain inquired of their chief what he (the latter) did with his best uniform when he gobbled it in a little episode they had on the "Jemics" River in the Old Dominion.

Then we gathered up traps and steamed out and up the west coast for Silver Spring, twelve miles further south. The Erie was getting ready to head down the river. Her charter party had been cruising for a month on the Upper St. John's. Darkness caught us out again, but at length our whistle was answered by a light and we headed inshore to a little wharf stuck up on stilts nearly a mile from land. There the lantern met us in a boat from shore, manned by three or four young men who were employed clearing and grafting an orange grove. From them we learned that we had passed the spring, to which they offered to pilot us back. They were on the lookout for a down river boat else we probably would not have found our destination at all. We ran back to the mouth of the stream from the spring, found a good berth for the Grace Irving, and made our camp under a magnificent palm tree on a bed of snow-white periwinkle shells on the bank of the stream. Young bull alligators, moving up and down the stream, kept up their bellowing all the night. At daylight leaping fish fairly churned its water into foam. We were tired of fish and fishing; had more than we knew what to do with, and supplied the neighbors. Going out at daybreak in the hope of getting a shot, I found the whole country covered with wild orange trees bending under their golden fruit. After breakfast we took the skiff and rowed up to the spring—less than a mile. If Salt Spring was beautiful, this is enchanting. Perhaps the rising sun and the just perceptible haze had something to do with it; but, in looking back now, I think I never sailed over any other three-quarters of a mile of water quite as charming as this. Like the other, this stream is filled and choked with herbage; the same coral-like plants and mosses; a world of long grasses waving in the swift current; a snowy floor beneath their half revealed in strips and patches and wild fields. Here and there are springs that would be considered immense in any other neighborhood, boiling up in the crystal depths with dancing domes of white sand and powdered shell. All is alive with fish of every size and hue darting in and among the verdure. In the bottom the turtles have their walks like rabbit patus, along which they were taking their morning promenades, hurried sometimes by the approaching boat or the dip of its oars. Not least of the beauties of the scene was a certain iridescent tinting upon the patches of white floor, caused, as I imagined, by the sun shining through the water at a low angle. The great spring is a single up-boiling fountain with its dome of white sand and shells at the bottom and a dome of water on the surface. It is enclosed in a semi-circular sweep of a shell ridge twenty or thirty feet high. The edge of the water is fringed with overhanging trees, a sugar field is beyond, and a rude sugar mill and row of boiling kettles near at hand. A few days before the steamer Erie had paddled up to the spring and tried to station herself over the fountain, but found it impossible to

remain there a moment. Returning over this enchanted way to the margin of the lake, we quickly gathered up our traps and headed homeward, where we arrived about sundown with black bass for the whole town. Boz.

Fish Culture.

KENTUCKY FISH COMMISSIONERS' REPORT.—Through the courtesy of Mr. William Griffith, of Louisville, we have become possessed of the (first) report of the Fish Commissioners of Kentucky for 1878, of which only 100 copies were printed. This report embraces the operations of the Commission from the date of their beginning, in 1876, until Nov. 1, 1877; and besides, we have an unpublished statement of the work done subsequently, from both of which we are enabled to make an intelligent summary of all that has been done.

Although some ten years behind the foremost of her sister States, Kentucky has accomplished a great deal in the brief two years of her endeavor, considering the small appropriation allotted for the purpose (\$3,000). She has built a convenient hatching house near Louisville, on the farm of Col. Allen Polk, in Jefferson County, with a capacity for hatching and nursing 300,000 young fry, which was erected under the supervision of John O. Palmer, Esq., the well known fish-culturist of Boscehol, Wisconsin; she has imported and hatched out California salmon fry enough to amount to about 210,000 in all, which have been widely distributed through the State; and she has liberally planted land-locked salmon, shad, salmon trout and wall-eyed pike (*Stizostedion americanum*), called salmon, pike-perch, etc. The latter is indigenous here; it is a fine edible and game fish, and ought to thrive. Every endeavor should be applied to its cultivation. Up to Nov. 1, 1877 (the period covered by the report), 46,225 California salmon (*S. ginnat*) had been placed in forty-four tributaries of the Ohio, Green, Kentucky, Licking and Cumberland rivers. These fish were a modicum saved from an importation of 200,000 from California, the greater part of which was destroyed by an October freshet in 1876. The fry were in the troughs of the hatching house at the time, and, it is believed, were killed by some poisonous substance washed into the spring by the rains, as the muddiness of the water would not of itself be fatal. Up to Nov. 1, 150,000 shad had been deposited in the Licking and Green rivers. All the fish planted are thriving and doing well, so far as is known.

The Commission has been especially busy during the spring just passed. In January and February, 71,500 additional California salmon were placed in tributaries of the rivers already named, and also in the Big Sandy; in April and May 5,500 land-locked salmon were distributed among the waters of seven counties; in April, May and June 45,000 salmon trout were planted in twenty-five counties; and in May, over a half million of wall-eyed pike were deposited in twenty counties. This is a very good beginning, and the results are sufficiently encouraging. Many of the waters of Kentucky are excellently adapted to fish propagation, and should eventually become as well stocked as in the days before they became depleted and barren. At present, Louisville alone pays a quarter of a million of dollars for table fish brought from other States, and possibly the consumption of the whole State is as much more. A half million dollars is worth saving, and a not too liberal appropriation of \$10,000 to \$15,000 per annum for the next three or four years will guarantee it. Some fish-passes must be constructed over dams, and money must be paid if necessary to prevent illegal netting, etc. The capacity of the hatching-house should also be increased.

Park Thomas, Esq., was the pioneer of practical effort. He was the first President of the Commission of ten gentlemen, among whom Mr. William Griffith, of Louisville, has perhaps been most prominent for industry and perseverance. We believe that the feeling of the community throughout the State sustains the Commission in its commendable labors. The number of the members of the Commission should be reduced to three.

NEW HAMPSHIRE—Nashua, July 6.—Salmon are running freely in the Merrimac. Some large ones were taken at Amoskeag Falls, Manchester, the 2d, and were seen by some who have hitherto been skeptical on the subject of the fish coming up over the Lawrence fishway. WEBB.

SALMON IN THE MERRIMAC.—The Fish Commissioner of New Hampshire, Samuel Webber, Esq., writes us from Manchester as follows, under date of June 30:

Having heard such wonderful stories about the swarms of salmon coming up the Merrimac River, I went up to Amoskeag Falls this morning to look for myself. I saw two beauties—one of eight to ten pounds and one of fifteen pounds apparently—lying in the eddy below the main fall; and one of from fifteen to twenty pounds—at any rate as long as my walking stick—in the canal above the fishway, where he had been detained by the closing of the canal gates, in order to allow the workmen to do some stone-laying on the new fishway which we are building. Mr. Kidder, the late warden, had seen him, about fifteen minutes before I got there, just below the mouth of the fishway, and in that time he had gone up and got trapped in the canal. The gates will be opened again in a few hours, and he will undoubtedly go on up the river and join his companions, several of whom have already been taken in one seine and placed in our storage pond at Livermore's Falls, to await their proper time for spawning next autumn. The run of full grown fish this year is gratifying to all of us, and we hope to get a good lot of spawn to restock the river with. The young fish put in

in 1876 seem to be going down to salt water this year, as we hear of them in various localities all the way down the river. This does not agree with old theories, as it proves a full residence of two years in fresh water before they return to the sea, but it is an unquestionable fact. I hope to get a full grown fellow to-morrow or next day to send Prof. Baird for his collection at the Smithsonian Institute.

HABITS OF EELS.—Editor *Forest and Stream*: I have but one question to ask your correspondent "B. T. B." How did he know whether the eels be saw in the Susquehanna were going up or down the river? R. B. ROOSEVELT.

TO PREVENT DISEASE IN TROUT.—South Side Sportsmen's Club, Oakdale, L. I., July 5.—Editor *Forest and Stream*: Having read an article on the aquaria disease in brook trout by Mr. Fred Mather, I would like for the benefit of those engaged in raising trout to say a word in regard to this disease. I find by experiment that this disease can be produced in a healthy trout in from ten to twelve days, with the water at 60 deg. F., by being irregular as to time and quantity of food given. I have trout that are doing well with water at 74 deg. F. by being regular as to time of feeding, quantity of food given and keeping a constant supply of fresh water running through the ponds. As often as once a week I brine the water with pure rock salt, which purifies the bottom of the ponds and prevents accumulations of unhealthy gases in food, which is liable to collect on the bottom. Regularity in time, quantity and quality of food given seems to effectually prevent the aquaria disease in trout. I feed beef hearts and lungs, chopped fine, once a day, to all my old trout, and twice a day to the yearlings, all of which are in fine condition. Would like to hear from others on this subject through the columns of your paper. R.

FURNISH FOOD FOR FISH.—Editor *Forest and Stream*: While the different States have become enthusiastic in the business of fish culture, wonderfully increasing them by art of production, hatching and protecting the young fish till they can take a fair start in the race of life, it is astonishing to me that they are not making provision to feed them. It seems to me that in all waters where fish are planted their natural food should be planted also. I know of lakes in Michigan where foreign fish have been put, and little or none of the natural feed for them. I know one lake where land-locked salmon were put, and no other fish in it except an occasional minnow. Our fish commissioners have mastered the art in hatching young fish, and beat nature itself. Now, let them turn their attention to give them food. Many of our inland waters are not sufficiently provided with food for the kind and numbers of fish put into them. The consequence is, the predacious fish, like "kilkilla'ato," devour one another or starve. In some waters there is a superabundance of small fish, minnows and the like, not used as game fish. Here, at the mouth of the St. Joseph River, spring and fall, are millions of small fish, an inch to an inch and a quarter long. They appear to be a lake shiner; slim, symmetrical, fine, soft, shiny scales; in shape like a ciscoe or herring; lack second dorsal like those fish, otherwise look almost the same; not as blue on the back as ciscoe. These shiners are from three to four inches long when mature. They are the climax of bass and pickerel bait; in fact for any fish. The mature ones are caught along the lake shore with mosquito-net seines. They would be, I think, fine, put up as sardines; no bones. These fish, that can be caught by the millions, could easily be put into all inland lakes to feed other fish; take those an inch long. The small worm that whitefish feed on put in lakes for whitefish, etc. LUTON.

St. Joseph, Michigan, July 1.

Natural History.

BREEDING HABITS OF THE GOLD-FINCH.

SOME interesting features are connected with the domestic life of this common and well known bird—the black-winged yellow-bird, hemp-bird, salad-bird and goldfinch of common speech, and the *Chrysomitris tristis* of systematists. It being distributed over the northern United States in summer, from Atlantic to Pacific, and by no means rare or retiring in disposition, we ought to be well informed in regard to its breeding habits (as indeed we are); but in looking into the subject, I find several gaps in our knowledge—or, more accurately, perhaps, I find gaps in my knowledge, which I am in hopes of having filled by observers who may care to read a brief review of present information upon the subject.

Of the courtship of the goldfinch Mr. Thos. Gentry paints a very pleasant picture. Whether all the details are to be relied upon as solid facts the reader himself can judge. Mr. Gentry's statements of bird life, especially as regards their nesting, often cause us to wonder how the fortunate observer could have ascertained such minutiae. I quote:

"In the month of April the flocks dissolve into small parties, preparatory to mating. It is quite common to see two males and one female together, the former lavishing the most endearing attentions upon the latter, and besides occasionally regaling her with the most delicious melodies. Whimsical and exceedingly variable, she selects one suitor and almost the next moment discards him for the other, which at this moment is perched near by, pouring out his love in the most charming manner. This condition of things lasts during a couple of days before the final choice is made. It seems to require the utmost condescension, as well as the greatest effort, for the successful suitor to retain his hold upon her affections, for she is likely to waver in the interval of time which elapses before nidification is begun. This duty so completely engrosses her time and attention that the tendency to flirtation, so to speak, has not time to manifest itself, and is soon abandoned.

"Subsequent to mating, and just before nidification, the successful mate and his partner ramble together in quest of food. When weary of this business they may be seen perched upon a common twig, when the former with his sole energy pours out his passion in the most charming language, ever and anon turning toward the object of his love as if to ascertain whether it meets her approval or not. A soft, low note, which may be expressed by *tee-yah*, is her sign of recogni-

tion. The song of the male is loud and clear in intonation, and produced with the varied moderation of *Pringilla canaria*."

The site selected for the nest is a tree or stout bush, in an upright crotch of which, or among supporting twigs that sprout from a horizontal branch, perhaps far from the trunk, the nest may be securely fastened. Apple, pear, maple and birch trees, willow, and other thornless shrubs, are the most common choice. Mr. Gentry asserts that in his region it requires six days to complete the structure, and that "oviposition commences on the ensuing day." Dr. Brewer saw a nest built and one egg laid in half that time in Boston, while a Michigan correspondent alleges two weeks as necessary there. Probably circumstances alter cases. The female appears to be the sole artificer. Sometimes dire destruction, in the shape of a gale of wind, or otherwise, overtakes the half finished homes of these birds and wrecks all their labor; but they will courageously rebuild, as witnessed by Mr. J. P. Hutehins in Central New York, and Gentry tells of a pair renewing the attempt to erect their nest in the same place after being hatched four times.

Few specimens of orithic skill in architecture have been more elaborately dwelt upon than the nest of the goldfinch. Yet, although very attractive in its result, it is by no means a conspicuous example of a bird's ingenuity, as is the well woven purse of the Baltimore oriole; for the goldfinch simply mats her pretty materials together by movements of her feet and body, not attempting to interweave much or knit by the aid of the bill.

Not being particular as to kind, so that the requisite softness and pliability are obtained, and gathering materials close by, the various substances entering into the composition of half the goldfinch's nests collected would make a long catalogue. Outwardly the ordinary nest, which is about the size of a large teacup (only in most cases much higher), exhibits a felting of vegetable fibres, shreds of reddish bark, fragments of ragged grasses, leaves, hemp, bits of fungus, tassels and flowers of various delicate weeds and grasses, with more or less vegetable wool, spiders' webs and lichens loosely attached. Through the surface, in such a way as to hold it stoutly in place, pass the supporting twigs of the crotch in which the whole rests. The mass of these materials, in which often a great deal of wool, fern-down and the like stuff is mixed, causes the walls to be thick and dense. Interiorly a receptacle for the sitting bird is hollowed and lined with fine rootlets, horse-hair, "plumose appendages, or pappus of the seeds of composite plants," raw cotton and fern-wool. In all these nests one element is sure to be present—thistle-down. The goldfinch adorns the walls of her houbloir with its glistening silk, and makes her bed of the elastic gossamer that floats through the summer air.

As I have remarked, the date of egg-laying varies greatly. It seems to occur earliest on the Southern Pacific coast, late in May; at Sacramento and in Utah about the middle of June; at Trenton, N. J., Dr. Abbott tells me he found their eggs from May 17 to August 3; Gentry puts the time at Philadelphia as "generally from the 10th to 15th June;" in New England, Samuels gives June 10 as the earliest date, while Dr. Brewer says it is usually past July 10 before their nests are constructed, and September before the broods are able to fly; in Michigan, eggs are recorded from May 20 to September 25, the first week in August being regarded as the height of the season. It is evident, then, that though the goldfinch breeds late, as a rule, yet sometimes it nestles quite as early as the majority of birds. Upon this point we need more observations. That the same individuals may and do vary greatly in the time from year to year I have no doubt; why, it is impossible, perhaps, to guess. That they have the power of retaining their eggs, or rather of repressing their desire to lay to a much greater extent than is supposed to be the case with most birds, is proved not only by the long delays which have been known to take place in their nest-building, with a successful finale, but also from the fact that those specimens dissected in April show an equal readiness and development of ovaries and testes with those shot late in the summer. I doubt whether anything more rational than caprice can be assigned as the cause of their anomalous irregular breeding; the usual explanation, scarcity of proper food for the young in early summer, has no supporting evidence in what we know of the bird's diet, and is distinctly proved of no weight by the fact that frequently some goldfinches do nest early, while others postpone it until very late, and this in the very same district.

The eggs of this species are five, and often six, in number, and in color faint bluish-white immisculate, the bluish tint appearing less strongly in empty specimens. Measurements of an average clutch were: .66x.51, .64x.50, .63x.50 and .62x.50 of an inch. Occasionally, as noted by Dr. Abbott and others, spotted examples are seen—the markings faint and scarce—but this is very rare and exceptional. The elaborately blotched eggs described by Wilson, Richardson and some other early authors, are surely erroneously identified.

About ten days appears to be the period of incubation. As no second brood (invariably?) is to be anticipated, the young are diligently attended by both parents, who exhibit the most clamorous distress whenever danger threatens. Cases are recorded of their returning not only to the same locality two or three successive summers, but even constructing a new nest upon the foundation of the old. I have seen such a structure, and observed not only that the height was twice its diameter, but that the materials of the second were precisely similar to those used in the first nest. It is said, also, that this species will bury under a "second story" the parasitic egg of the cowbird, when it is so unlucky as to have one thrust upon it, as does the other yellow bird, *Dendroica aestiva*. When almost a fortnight of age, the young leave the nest, and soon the little family groups combine into the merry flocks that we see gaily playing about the sere reeds in autumn, or drifting away in a cloud of thistle-down before the October breeze.

ERNEST INGERSOLL.

PROCREATION OF SKATES.—Editor of *Forest and Stream*: The communication on "The Procreation of Skates" in the last number of *FOREST AND STREAM* (June 27, 1878) induce me to believe that a little further information may be acceptable. In the order of *Raja* viviparity is the rule, and oviparity the exception. These facts have long been known, and have been co-ordinated with morphological characteristics. Thus, after the definition of the family *Raja* or *Raidia*, Muller and Herbst state that "they are the only egg-laying rays." (*Sie sind die einzigen eierlegenden Rochen*.) The facts that the *Trigonidae* as well as the *Myliobatidae*, *Cephalopteridae*, *Torpedinidae*, *Rhinobatidae* and *Pristidae* are viviparous were long ago recognized. It is therefore singular that Professor Agassiz, as late as 1855, should have alluded to the information conveyed to him by Mr. Thayer S. Alert—that the stingray of the coast of North Carolina brings forth

young alive—as being, “so far as [he knew], the first example of a viviparous species in the family [i. e. order] of rays.” At present I cannot recall any instance on record of an egg-laying ray outside the family *Raiidae*. *Platyrrhina*, which is egg-laying, and which has been referred to the family *Rhinobatidae*, seems to me to belong rather to the *Raiidae*, and as to the statement of Mr. Jonathan Couch that he had satisfied himself that *myliobates* was oviparous, I simply do not believe him, and prefer rather to regard him as an incompetent witness, and to rely on the statements to the contrary made by Aldrovandi and Lorenzini.

In answer to “Moxon,” it may be added that all vertebrates (including man and other mammals) produce their young through the intervention of eggs. In mammals the eggs are very minute; in others they attain a considerable size.

Washington, D. C., June, 1878.

THEO. GILL.

—The following quite interesting letter from Mr. Stearns throws additional light on the stingrays. Mr. Stearns has made some very valuable collections of fish, etc., for the Smithsonian Institution, and is thoroughly conversant with the ichthyology of Florida:

Editor Forest and Stream: Being several years in the fish business, and a few months engaged in collecting specimens of the fishes of this vicinity for the Smithsonian Institution, I have had the opportunity to examine species of *Myliobatis*, *Trygonidae* and *Raiidae*. Of the *Myliobatis*, I have examined some specimens of *Rhinoptera quadriloba*, a few of which contained young, sometimes two, but usually one only with no trace of eggs in any of them. In April I secured one of this species, of a size convenient for shipment, which contained young, and forwarded it to the Smithsonian Institution. I presume this is the one mentioned by Professor Bean. *Trygon centroura* being very abundant, I have secured and examined many. I think they attain a much larger size than *R. quadriloba*; one that was caught in a seine this spring measured six feet and eight inches across the back. In many that I have cut open I have found young, varying in size, that were quite lively, and when once free seemed able to take care of themselves; in others the young were small and without much life. Four is the greatest number that I have taken from one individual. I have never found the leathery eggs or sacks in the stingray, but have often picked up on the seabeaches dried sacks, somewhat different from those of the *Raiidae*, which I always supposed belonged to some species of *Gubiorhinidae*. The fishermen here say that “the stingray brings forth young alive twice a year,” in April and in October; but from my own observations I can only assert that it brings forth young alive in April, a fact I have noticed several years.

SILAS STEARNS.

A SEA LION WHELP.—I have been awaiting the birth of the sea lion for some time. For a few days past I noticed that the mother became very uneasy and restless, constantly swimming and diving about the basin, frequently keeping it up until late at night. On the night of the 24th inst. I concealed myself and watched her until after ten o'clock, when she seemed more uneasy than usual, several times stopping and resting her chin on the lip of the basin, peering out through the railing and moaning in a very peculiar manner, as if she would like to get out. The next morning I was up bright and early, and on getting in sight of the tank saw Prince, the male, swimming back and forth as if he had something worrying him; but the female was missing. I immediately hurried around so as to look into the door of their house, which is built of stone in the centre of the basin, and as soon as Dolly, the female, heard my footsteps she put her head around the jamb of the door and gave that peculiar hellow common to the females while nursing their young. Then it was a race between Prince and myself who should reach the roof first. I scrambled up the ladder, flew across the bridge and sprang on the roof; but he was too quick for me, and was quietly awaiting my arrival, duly expecting his breakfast of fish. Finding himself disappointed he gave a snort and sullenly plunged into the water, while I as quickly disappeared through the “man-hole,” intent on penetrating the mysteries of Dolly’s bed-chamber. So soon as my eyes became accustomed to the gloom, I found that she had waddled alongside of me and was looking back over her shoulder at the baby, which was squalling its best, no doubt started out of its morning nap by my sudden appearance. I could have fairly bugged the mother with delight if I had not feared an attack in the rear from Master Prince, who had come in by the door, and by his voice and actions seemed disposed to resent my intrusion on his wife’s privacy. By dint of coaxing and wheedling I managed to get him outside and fastened the door, while Dolly, taking it all in good part, had waddled back to her babe, rolled over on her side, and was busily engaged in giving it its morning’s ration; and I, by way of quieting my nerves, struck a match, lighted my maternal pipe, squatted down on the floor and began to muse over my new role of playing dry nurse to a baby sea lion, the first, I believe, ever born and bred in captivity in the United States. I would like to forward you its weights and measurements, but mamma strongly objects to have her darling handled. As soon as I can do so with safety both to the youngster and myself you shall have them.

FRANK J. THOMPSON.

Cincinnati.

BIRTH OF YOUNG SNAKES.—Dr. Bean of the Smithsonian Institution, informs us that their garter snake (*A. eutaenia*), was safely delivered of twenty-six young on the 2d of July. Mother and young doing well. Experiments will be made with a view of learning whether or not this snake will swallow its young.

HOW THE CAT JUMPS.—Some time ago an article went the rounds of the papers as to the actual distance cleared by a cat. The cat wanted a canary in a cage and sprang from the ground eleven feet up. A gentleman employed as shipping clerk on the wharves informs us of having measured a cat-jump of twelve feet two inches, straight up. The cat belonged to a vessel, got off on a barge and made a clear spring from the deck of the barge to the bulwark of the vessel.

ALBINO FISH.—In the winter of 1874 and 1875, in company with W. B. R., known to the readers of the FOREST AND STREAM as “Lutron,” we started from Benton Harbor for Stony Lake, in Oceana County, Mich., to fish for pickerel and bass through the ice, with spear and decoy. We used a small tent made of common sheeting and painted with a composition made by boiling linseed oil and putting any old rub-

ber boots or shoes into the oil while it was boiling. When cool we added lampblack and a little japan to dry it. This makes a tent impervious to water, air or light. Our tents are just large enough for one person to sit in with ease. We fished on the lake about three weeks and caught 1,300 pounds of fish, mostly pickerel. During our fishing we saw three pickerel that were half white from the tail forward to about the middle, the other part the natural color of pickerel. I saw two, one of which would weigh about six pounds, the other about three. The one W. B. R. saw he judged to weigh from four to five pounds. We did not succeed in getting either of the fish out of the water, however. W. B. R. hit the one he saw with the spear, but lost him before he could get him out. We were told by the people there that there had been several caught out of the lake that were nearly all white.

Benton Harbor, Mich., June, 1878.

S. OGDEN.

THE BUTEO ALBI CAUDATUS.—I desire briefly to record the capture of *Buteo albi caudatus* (Vieill), near Fort Brown, Texas, where it is rather common during the summer months. A more extended notice of this addition to the avifauna of the United States will soon appear.

Washington, D. C.

DR. J. C. MERRILL, U. S. A.

A GOOD MOVE.—Louisville, Ky., is soon to have a Zoological and botanical park.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING JUNE 29.—Two flying squirrels, *Pteromys volucella*, presented by Mr. Joseph H. Choate, New York city; 2 rabbits, *Lepus cuniculus*, presented by Mr. Eastman Johnson, New York city; 2 razor-billed curassows, *Mitua tuberosa*, presented by Mr. R. M. Everit, New Haven; 2 Zenaida doves, *Zenaida amabilis*; 12 pea-fowls, *Pavo cristatus*, and 20 Guinea fowls, *Nunidia meleagris*, bred in the Menagerie.

W. A. CONKLIN, Director.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR WEEK ENDING JULY 2, INCLUSIVE.—One lizard, *Sceloporus*, purchased; three garter snakes, *E. sirtalis*, presented; one garter snake, *E. sirtalis parietalis*, presented; five snakes, *Coluber vulpinus*, presented; one copperbelly snake, *T. sipedon erythrogaster*, presented; one water snake, *T. sipedon*, presented; three hog-nosed snakes, *Heterodon platyrhina*, presented; one ringed snake, *Cnemidophorus coccinea*, presented; one milk snake, *Coluber obsoletus confinis*, presented; one Boscaulon constrictor, presented; one song thrush, *Turdus musicus*, presented; two American robins, *Turdus migratorius*, presented; two gray foxes, *Fulpes virginianus*, presented; two prairie wolves, *Canis latrans*, purchased; two swift foxes, *Fulpes velox*, purchased; one belzebub spider monkey, *Ateles belzebuth*, presented; one coat red var, *Nasua nasica*, purchased; one opossum and ten young, *D. virginiana*, presented; one male deer, *Cervus macrotis*, born in Garden.

The Kennel.

10 CORRESPONDENTS.—Those desiring to prescribe for their dogs, please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the snout, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, sign of suffering, etc.

DOGS IN SOUTHWESTERN GEORGIA.

EDITOR FOREST AND STREAM:

We have no red foxes in this vicinity. They are, however, numerous in middle Georgia and to within fifty miles of here. But they seem to be gradually approaching and will possibly be here in three or four years more. The gray foxes are numerous, and a bound that can pick them up in two or two and a half hours is as fast as one as we want. Any shorter time spoils the sport. Several of us keep two, three, or four dogs apiece, and when we want a chase we meet at some designated time and place. These hunts are generally appointed from one to the other, but when disappointments occur on account of weather, they are appointed, perhaps, weeks ahead, and Lorenzo Dow never filled his appointments with any more punctuality than we fill these. We run these same bounds after deer. Deer are becoming very scarce, and as we have no game law, we have made a compact among ourselves to shoot no more deer for three years, from the first of February last. We have some little trouble in keeping would-be hunters off, but we talk big, and make a great noise, and thereby make them shy. In counties south of us—Irwin, Worth, Wilcox, etc.—deer are hunted incessantly, and though the practice is an outrage, I expect some of those settlers have the best trained bounds in the world. These same dogs are made to take the thick branch, while the men ride on the open hill-sides. Not a whimper do they make until the deer is jumped; then comes a keen squall, and out bounds the deer like a streak of scared lightning, and, with ears laid back, goes his course, regardless of men or horses. If he goes off severely crippled, the dogs will follow in full cry, and you must keep up. If he goes off unharmed, you can sit down, for the bounds will be back in thirty minutes to try further on for another deer; and so the sport goes on till you are satisfied. Then these dogs will “Slow Track”—following a trail either in a walk or run, as you may wish, without a whimper. When we are driving through large swamps the dogs can be put in, and, by a peculiar whistle and hollow, can be made to trail and run in full cry, the same as our bounds. Many other things these bounds are taught to do too incredible to be told to one who never saw them hunt. If the laws of Georgia would afford proper protection, this is the finest deer hunting country in the world. Our bird dogs are almost entirely pointers. The hot weather and immense quantities of cockle burrs that grow in the fields make setters undesirable. There are only two setters in the vicinity; one is a Gordon and the other an imported English dog. But our pointers beat them badly. There are no regular kennels in this portion of the State. Some twelve or fifteen of us, who live in three different counties, hunt together and club together, so to speak, and we keep up our dogs among ourselves, and nearly all of them can be traced back to Chapman’s “Dash” and Dick Brown’s “Belle.”

Perhaps it may seem strange to you how men living ten, fifteen and twenty miles apart, can hunt together, but, as a friend once said to me, this is a country of “magnificent distances,” and with us a good horse is a *sine qua non*—as much so as a good barn to a Western granger. We think nothing of driving ten miles by sunrise to meet for a bird hunt. We invariably hunt on horseback, getting down to shoot. This takes but a moment, as most of our horses do not require hitching. Our pointers are mostly medium sized dogs, heavily muscled—solid liver and black and white being the leading colors. I should add that the running of our red fox hounds is almost incredible. I never would believe, until I saw them run, and I can’t venture to describe them. A rail fence six feet high seems to be just touched with the hind feet, then a few short, chopped yelps, and they are gone. Don’t talk about riding to them in a country like Middle Georgia. Some one who has more knowledge of them, and who has more notoriety for veracity, must carry you through the chase. Your Tennessee and Gaston correspondents talk red fox dog better than any one I have read before. Things have a different ring on paper from what they do across the country. If they only would write it up, M. J. Hatcher or L. M. Feltou, of Marshallville, Hum Ridley or Dr. Hamilton, of Clinton, can give you the red fox dog to perfection.

Americus, Ga., July 1.

M. B. C.

[We should be most happy to hear from the gentlemen thus introduced to our readers.—Ed.]

SALT FOR DISTEMPER.—Seeing the article from “R. O’C” on treatment of distemper, induces me to say what I have often thought of saying through your paper before, but the remedy was so simple I feared your readers would not believe it. For years our remedy has been the same as given by “B. W. B.” except, instead of salts, we have used castor oil and laudanum. Perhaps the salts is better—we have never tried it. In severe cases, that have been neglected, I have known it to fail; but taken when the disease first shows itself, it is undoubtedly the best remedy I ever tried. Sometimes the dry table salt answers every purpose, without the oil and laudanum. A tablespoonful is the dose we give, but sometimes it will fail to vomit. When it does not we repeat in ten minutes—the second dose always accomplishing the result. I think any one who will try the remedy once, and carefully note its effect, will be convinced of its efficacy. Of course, the dog must be otherwise taken care of—kept comfortable and fed on soft food. Where we got the remedy, I do not now remember—perhaps from Columbus, Ga. When I say “we,” I mean “us,” and this, you know, is very explicit—embracing the bird-shooting fraternity of two or three counties in southwestern Georgia. I give our experience for what it is worth, as it corroborates the statement of you, Dublin correspondent.

Americus, Ga., July 1st, 1878.

Suor.

HOW A NEBRASKA DOG DIED.—This story of a dog’s devotion, grief and death comes from Lincoln, Nebraska, and is told by the *Journal* of that town:

“Our readers will remember the drowning last Sunday of the little six-year-old boy, Dany. The child had a little dog who was his constant companion and playmate. When the accident occurred that resulted in the drowning of the boy, the dog was with him, and by his strange conduct and uneasiness he attracted the attention of those present. While the boy was lying in the bottom of the stream, the dog would run to the child’s mother and then toward the place where the boy was supposed to be, and finally plunged in and swam around or over the spot where his little master lay. After the body had been placed in the coffin, the dog manifested a strong desire to see the child, and when the lid of the coffin was raised, he licked the dead face and seem to feel intense grief. In a short time the dog went out to the railroad track and lay down upon the road, as it had done many times before; but upon the approach of the train, he laid himself upon the rail and deliberately permitted the train to pass over his body—being killed. The whole actions of the dog were such as to convince one that it was governed by reasoning powers, and is another illustration of the remarkable love or attachment that some animals have for their masters. The mother, at the time of the drowning, supposed the child was at home, and, therefore, neglected to obey the hint given by the dog that might have saved the boy’s life.”

DEATH OF ISLAND BELLE.—The many friends of Mr. Clint. Wisner will be pained to learn of the death of Island Belle, who was exhibited at the last N. Y. Bench show. While at the show she caught the distemper, and while at one time it was thought she could be saved, all efforts went for nothing, and she died on the 1st of July. She was (although young) a splendidly broken hitch, with all the best qualities.

LEO.—Putnam, Conn., June 24.—Mr. E. T. Whitmore’s fine pointer dog Leo, which recently died of cerebro-spinal meningitis, was among the most intelligent and best trained dogs we had here. After several days of great suffering, the kindly aid of chloroform was called in and the poor brute’s sufferings ended. His pedigree none could find fault with or question, as his mother was Mr. Murray’s Jet; father, Martin Keith’s dog Browney, and Browney’s father, Colonel Colt’s famous dog Phil, of Hartford. Leo was four years of age, brave, faithful, intelligent, loving, and beloved by all of Mr. Whitmore’s family and friends. Peace be to his ashes. If there is a dog’s heaven, Leo has gone there.

A. M. G.

VERY CHOICE DOGS.—A gentleman of Baltimore, a member of the Kennel Club, is desirous of disposing of some of his choicest stock. Dream, as fine a black and tan bitch as can be found, is to be disposed of. In the lot are puppies by Flake and Lillie. Our own personal knowledge of this stock induces us to speak of these animals in the highest terms. It is rarely that so fine a lot of dogs are put on the market. Address J. A. S., care of FOREST AND STREAM. See advertisement.

SALES.—The Irish red setter Rake, by Patt O’Rooney, ex Sal, has been sold by Mr. John M. Niall, Killaloe, Ireland, to Count Schimmelpenninck, Ahrensburg Castle, Prussia, for, we understand, a “century.” Rake is litter brother to Dash, first prize winner at Londonderry show. He is half-brother to Mr. Fottler’s recently imported bitch Kathleen.

WHELPS.—Mr. E. S. Wauwauker’s red Irish setter bitch Leaf (Plunket—Stella) whelped, June 26, one dog and two

bitches; sired by Ripple (Pride of the Border—Jessie). Mr. E. Orgill's Romp, winner in the champion class of New York, had twelve puppies, nine dogs, three bitches, all lemon and white, on the 2d of July, by Rush.

—Rev. Wm. McGuinness, of Brooklyn, N. Y., has placed in Mr. Wannmaker's hands, for thorough breaking, his all red Irish setter dog Tara, by Rufus, out of Belle Mead. Tara is 10 months old, very handsome and promising, and won second prize in his class at late N. Y. Bench Show.

FITTING OUT FOR A CRUISE.

The time being near at hand for our yacht squadrons to heave up and head to the eastward, they will do well to overhaul not only their provisions, but the boatswain's locker also. There may have been cases on record where provender ran short, there never has been a case where the bmnidy (taken along for medicinal purposes, of course) came to an end before the cruise; but it is just as certain that the boatswain's and navigator's departments have been found seriously lacking the very first day away from regular moorings. We remember, for example, during the cruise of one of our most prominent clubs, to have sent all round the fleet for a spare double block, and there was not one to be had. Spun yarn, seizing stuff, watch tackles, binnacles, charts, sailing directions, leads and logs, yes, even such small things as a sheath-knife, marlinspike or palm and needle, were as scarce and far between as sperms in a wash tub. With the spread of Corinthian knowledge and the jack-tar spirit on the increase from year to year, we hope to see a little more regard paid to the first elements of sound seamanship, hitherto sadly neglected among our amateur sailors. When you are about to make sail for foreign parts observe the following: Select what you will most need of such a class and kind that will be within your means from the list subjoined, and what else your experience has taught you to be of service and likely to be wanted. In the way of spare spars take as little as possible, as light sticks can be procured and made at any port along the coast, no matter how small. Take account of stock of provisions and water, and don't trust to luck that you may have enough. There are some handy little arrangements in the market which will distill salt water and may come into requisition should the regular tanks run dry through want of foresight or accidental leakage. It is a good plan in large yachts bound on a long cruise to keep a regular account of the water on hand and the amount daily issued. Coils of spare rope should be so stowed that any one of them may be readily got at separately; hawsers or tow-ropes should be specially supplied, for to use the running gear of a vessel for any other than its proper purpose, will be found more expensive in the end than an outfit of towing and anchoring gear. See that your spars are properly stayed, rigging set up for a full duff, gaskets, stops and furling lines on hand as required, the ends of all running rigging neatly whipped or hitched;—nothing looks more slovenly than fagged rope-ends. Reeve off life-lines on cabin trunks, taffrail and ladders, knot ends of all ropes likely to unreeve during a squall or through carelessness, and put "square marks" on jib sheets and other gear on sails that cannot be readily seen by the skipper aft, so as to know when they are "down" or "home." See that sails are securely hent and fully "hailed out" by the casings, that spare sails and light canvas is fitted ready for use before being consigned to the sail room, and that they are tallied, if many. See that all dead-eyes are set square, that sheer-poles run with the sheer of the rail, that awnings, boat sails, oars, painters, fenders, and plugs are in place, the latter attached to a line, balers for each boat, hand jigger and spare tackles supplied.

In general, that all blocks and thimbles shall be well slushed and work easily and noiselessly, and that chaffing-mats and battens are seized on to save the gear where required. If about to go to sea, be prepared to secure everything, such as galley, spare spars, anchors, etc., and have tarpaulins at hand to batten down in case of meeting rough water, and have stops and staples in place for that purpose. Provide life-buoys, one on each quarter, lightly lashed to the hullwarks or in the cockpit with aplite rope-yarn, or, what is better still, fit your vessel out with deer-hair mattresses and cushions, which form the best life-buoy known, being lighter, more buoyant, and neater than any other, as well as cheaper. Keep a liberal amount of oil and wick for lamp use in stock, and do not overlook side-lights and deck lanterns. See Government Regulations on this head, as well as for fog-horn called for by the Rules of the Road. Have an assortment of tools on board, which should include an ax or hatchet, saw, hammer, steel wedge, small handspike, marlin-spike, serving-mallet, large knife, screws and nails, a few sheets copper or zinc, old bolt of canvas, palm and needles, with sewing twine, beeswax pencil and combination rule, paints, and as many more articles in this line as you can conveniently stow, or have found necessary by experience. Have also spare thimbles, sister hooks, blocks, and small stuff to suit the size of the vessel. Before getting under way ascertain beyond doubt that the pumps are in good working order, that all openings can be closed, and have a spare tiller at hand. In relation to navigation instruments, very much depends upon the discretion of the captain, as long as we confine our cruising to home waters, where "dead reckoning," at most, will come into play. The more water you draw, the greater should be the detail and variety of your charts: one general, a set of detail and harbor charts make up a full complement. Use only a good, reliable compass, placed strictly fore-and-aft in a binnacle furnished with ample facilities for lighting; the liquid compasses of Ritchie are the best. For ascertaining speed and distance run a patent log is preferable, and a lead line, properly marked, should be deemed indispensable.

For "plotting" or laying out a course made or proposed, as well as for obtaining bearings, do not fail to have a parallel ruler and a pair of ordinary dividers. A log-book, with full record of events and sailing, should always be kept on a cruise. Overhaul your ground tackle, have marks put on at certain intervals, so that you may know the amount of chain you are riding to, and be prepared to "slip" in the event of sudden emergency. Keep what powder and flash signals or rockets you may deem needful in a safe dry place, not to be opened except by the skipper or his deputy, and to contain no other article but explosives. Finally, see to it that every man on board knows his duties, has a place to stow his duds and to hunk at night; assign him to his place at mess, and have him provide himself with ample clothing, light and heavy, and a set of tarpaulins. Take along a sea-chest of medicines (homœopathic are easiest to administer, if you can only screw up your gullibility to the necessary point), and remember that in all cases the perfect seaman should bear in mind that "an ounce of prevention is better than a pound of cure," and that with the skipper "forewarned should be forearmed." Preserve discipline among the hands before the mast and order among the cock pit tars. Under such circumstances, cruising will not degenerate into a genteel mob aloft on a spree, but will result in a vast deal of benefit to both body and mind, and will be remembered by all with advantage and pleasure. Cabin stores and a full outfit, with all the advice which long experience can give, may be obtained from Messrs. Wheelock, Slocer & Co., of this city. Their card will be found in another part of the paper.

THE PRETTIEST YACHT IN AMERICA.—Certainly Mr. James Stillman is to be congratulated upon the possession of what is undoubtedly not only the prettiest yacht in America, but also the best fitted and most seaworthy afloat. She was not built for speed, but with a view to wholesome cruising on or off soundings in fair or dirty weather. That she will come fully up to expectations on these points there can be no question, for, designed by Mr. A. Carey Smith in close resemblance of the finest type of the British cutter, neither too narrow nor too deep, the experience of our consins across the sea in such craft is enough to assure us of the perfect seagoing qualities of this new craft without waiting for her trial. When she comes out her beauty will not be denied, even by the greatest stickler for the stereotyped American sloop. Concerning her speed we are not at all loth to give an opinion. She will out sail our sloops twice out of three times anywhere outside of a mill-pond, on the wind and off the wind; we expect her to do wonders in smooth water. This new craft is of the full-blooded cutter type, no compromise with the sloop whatever, and we could sit for days on the pier, alongside of which she lies, without getting tired of looking at her. To those who may wish to see what a real yacht, a perfect little ship in fact, ought to be, we would advise a trip to the foot of Kent street, Greenpoint, where the new cutter now lies fitting out. Be sure and go early, for you will not be able to tear yourselves away from such a pleasure as a view of her affords. It does one good to look at the wholesome stuff that has been put into her, double frames of siding and molding that come very close to the figures called for by "Lloyd's Yacht Register," and clamps of yellow pine and deck beams of a size and kneed as they would be in a big sloop of twice her size. There is a look of business about the whole boat, model, scantling and rig, that puts to shame the flimsiness of our smooth-water, fair-weather sloops. She seems to speak to one all over with an air of "Go thou and do likewise." When she gets out to sea in a little bit of a kick-up, there will be no parting of gear, no drawing of cleats, twisting of rudder heads, filling of cock-pit and leaking at the seams; not much. She can stand a gale, she can ride one out in safety and with ease of motion; she can cruise to Australia and back. As for the joiner-work, outside and in, take a look at it and let us know where else you can see the like. Nothing gaudy, but tasty and substantial, the workmanship on the new cutter may be equalled, cannot be surpassed. We think yachtmen generally will agree with us on this if they once cast their toplights on this beauty. Only 40ft. on load line, 46 over all, with 9ft. 3in. beam, and 7ft. 6in. depth of hold, she is the most perfectly planned and fitted yacht in our waters. Small, is she? Don't you believe it, friend reader. She looks like a very small concern end on, or for that matter even right ahead, but just step aboard with us. Do you notice the ship-shape fashion she is got up in from stem to stern? Here we are on the quarter-deck; look forward and examine her beautifully-laid flush deck; no high cabin trunk rising like a six-story hotel to bark your shins on; no narrow gangways to balance along on like a tight-rope dancer; no ugly cock-pit to take up valuable stowage room below, but broad gangways, plenty of room to cross from side to side before and abaft the hatches. An honest, stout stick for bowsprit, to rig in or out at will, and that without blistering your hands or raising your ire, by simply taking a turn with the fall around a windlass and heaving away, a stout pair of bits and a large forecable hatch to supply air below. Mast nearly amidships, with a neat little life rail round it, to which all the gear will be belayed, doing away with the plugging of cleats to the mast itself. Next, the main saloon skylight and the companion-hatch in one, and abaft that, a low combing on deck, to keep the helmsman's feet dry. Inside of this combing there is a circular deck scuttle of brass leading to the sail-room below, and in which the man at the tiller can stand in heavy weather, and abaft all a clear counter for handling the main sheet. Combing are kept narrow and take up little room, so that the cutter may be said to have a genuine spar deck to her. But how about her below? Can so small a craft have much accommodation? Well, see for yourself. Descend the companion. Forward, in the "eyes," are the boatswain's lockers; next, the forecable, with a galley that would do a sloop-of-war no discredit, a sink and a pump, and two berths for the crew. Amidships, where, *a la* White Stars, "the motion of the vessel is least felt," we find a snug main saloon, with broad and easy sofas on each side, and, what is more, no prison wall centreboard to keep you in close confinement and prevent talking across the ship. On the starboard side is the owner's private stateroom—small, to be sure, but still bulkheaded off from the rest; on the port side the pantry. Just forward of the stateroom and reaching into the forecable, is a spacious ice-house. Aft of the *grand salon*, on either side of the companion ladder, we find a w. c. and a wash-room, and aft of those again the ladies' stateroom. The latter will be furnished with large bunk and sofa, and has a dead light in the ceiling. This cabin is bulkheaded off from the run, the fine ends being devoted to the stowage of sails, gear, etc. A best and second heat bower of Martin's patent, with chains leading into lockers under the floor, constitute her ground tackle. Aloft, this craft is rigged as a full cutter, short lower mast, long topmast, fitted to house, its shrouds spread by a hard-

wood cross-tree, three wire shrouds a side rattled down and set up by stout tarred rope lanyards that will do some real service and not be merely for show, brass sheer poles and rudder cap. Dimensions of spars: Mast, 32ft., deck to hounds; boom, 34ft.; gaff, 20ft.; topmast, 25ft.; and how-sprit outboard, 18ft. 6in. She has only a short rig for cruising. But no description can give an adequate idea of the appearance as a whole of this pretty cutter. One must see her close by to fully appreciate her many excellences. She was built by Mr. Henry Piepgrass, and, as may be expected, is the apple of his eye. Mr. Roosevelt Schuyler superintended her construction, Captain David, of the *Wanderer*, has in charge her rigging, and A. B. Sands furnished the plumbing work. We have been thus particular in the description of Mr. Stillman's new cutter, as we regard her as the forerunner of a class which we are most anxious to see introduced into our waters. They will do more to promote honest yachting and make seamen of our amateurs than any other type. This cutter will make many converts this season, to whom an entirely new chapter of yacht sailing will be opened by her advent.

YACHTING NEWS.

BOSTON CITY REGATTA.—As customary, July 4 was celebrated in Boston by our open regatta for prizes offered by the municipality. There was a large list of entries, and the wind was fresh from the N. E., but unfortunately died away during the afternoon; and the boats of the first class, which sailed over an eight-mile course, did not make the race within the stipulated time and no prizes were awarded them. The following is a summary of the race:

SECOND CLASS SCHOONERS.

Yacht.	Owner.	Length.	H. M. S.	Actual time.	Corrected time.

EMMA T.—Early this season Commodore Baker gave due notice that he did not propose to race his sloop this year, and that her spars would be cut down. Consequently it is a little late in the year to take exceptions to her not appearing at the starting line in the recent regatta of the Columbia Club. Her owner proposes to enjoy cruising at his leisure, but even under her short canvas we understand that she holds her own with the best of them.

VIOLET'S CRUISE.—Mr. Chas H. Whiting has been cruising in New York waters in the *Violet*, purchased from Com. Frank E. Peabody of the Dorchester Yacht Club. He sailed again for Newport, July 1. The *Violet* has not been sold to New York parties as previously reported.

EMPIRE YACHT CLUB.—This club held a regatta on the national holiday, but owing to the scant wind only four yachts entered. The *Dart* led across the line off the club house, Harlem, followed by *Inspector*, *Emma D.* and *Lanthier*. The course was from stake-boat at club house to Throgg's Neck Buoy and return. The yachts had a fair wind both ways. *Lanthier* bore up for North Brother Island during a thunder squall, *Inspector* turned the buoy first and *Dart* close astern of her. This order was maintained all the way home, *Inspector* winning in 2h. 57m., *Dart* second in 3h. 17m., and *Emma D.* third in 3h. 22m.

LAKE YACHTING—Belleville, Ont., June 28.—In the annual regatta at Trenton on the 26th there were seven entries in the third class race, which resulted as follows: *Idler*, of Brighton, first; *Wideawake*, of Trenton, second, and *Mystery*, of Kingston, third. The second class race had only three entries, and proved virtually another match between the *Katie Gray*, of Belleville, and the *Surprise*, of Trenton, which the *Katie* again succeeded in winning, though by half a minute only. The wind was very light and variable, and greatly favored the *Surprise* toward the close of the race. The famous *Annie Outthbert*, the champion of the lakes, has been sold to parties in Chicago for the paltry sum of \$1,800.—A regatta is to take place at Kingston on Monday, when three yachts of the local fleet, the *Surprise* and a large number of other yachts from a distance will compete. Of the result of this race and that at Clayton, N. Y., on July 4, I will apprise you in my next.

PORT TALK.

Belleville, July 3.—Another victory awaited the Belleville yachts in the regatta at Kingston on the 1st instant. There were a large number of competitors, but the *Kathleen* and *Katie Gray*, of this place, took the first and second prizes, the third falling to the *Victorine*, of Alexandria Bay, a craft built in New York, with the intent of "scooping" all the lake boats, a feat which she has been unable to perform, although she is undoubtedly a fast one. The third class race resulted in the success of the *Comet*, of Chaumont, N. Y.; *Wideawake*, of Trenton, second, and *Eclipse* third. The *Minnie A.*, of Belleville, which was fourth, would have got a prize but for her sailing-master mistaking the course on the first round. There will be a race here about the end of the month for a silver cup, offered by ex-Commodore Kelso, of the Bay of Quinte Yacht Club.

YACHTING DRIFT.

San Francisco Yacht Club will soon be quartered in their new club house.....Vice-Commodore Harrison sails in his yacht *Prolic* in San Francisco Bay.....*Resolute* has been chartered by a Boston gentleman.....Steam yachts *Ideal* and *Vidette* are likely to have a match race; who is going to sit on the safety valves?.....*Volante*, cutter, is in Boston waters; also sloop *Siren*, which had been to Newport on a cruise.....Steam yacht *Day Dream* has arrived at Oalveston via New Orleans.....Somebody doubts whether the next annual N. Y. Bay Regatta will be a success. Of course it will; the Hoffman House surely has nothing to do with next year's regatta.....Steamer *This*, from Philadelphia, is at Newport.

OAR AND PADDLE.

THE HENLEY REGATTA.—The first day of the Henley Regatta was all that could be wished as to weather and water. The Columbians were in fine condition. Their opponents on the first day—July 4—were the Dublin crew in the first heat for the Stewards Challenge Cup, and, oddly enough, the only other American crew, the Shoe-wae-cae-mettes, of Monroe, Mich. The first race on the programme was the first heat for the diamond challenge sculls, between George W. Lee, of the Triton Club, Newark, N. J., and Edwards Moss, of Oxford University fame. A good start was made by both men, Moss pulling thirty-four and quickening up to thirty-six. Lee led from the beginning, and when Poplar Point was reached, had a full length ahead. Lee, when only twenty feet from the finish, ceased rowing suddenly, having passed a stump which he supposed to be the finish. The Englishman then rapidly drew up and passed him, being declared winner through the oversight of Lee, the latter virtually having won the race, but the prize going, of course, to Moss on a purely technical ground. How Lee came to make such an inexcusable mistake is more than we can surmise. Moss crossed the line in 9m. 3s., and Englishmen felt happy that they had won by a scratch, and the "blasted Yankee" had lost his chance.

The first heat for the Stewards Cup followed, crews and weights as follows:

Shoe-wae-cae-mettes—Moses Nadeau, 144lbs.; H. W. Durrell, 149lbs.; J. Nadeau, 146lbs.; S. Dussane, 168lbs.

Columbia College—E. A. Sage, 170lbs.; C. Edson, 161lbs.; H. E. Ridahok, 170lbs.; J. T. Goodwin, 153lbs.

Dublin University Rowing Club—R. H. Courtney, 150lbs.; R. H. Lahat, 150lbs.; J. Cooper, 165lbs.; G. Hickson, 161lbs.

Columbias had the inside position, near the Berks shore, and the Shoes were over on the Bucks side, with the Irish crew between them. The Shoes made a poor start, but immediately went to the front, and soon had lots of water between them and the Dublins. Columbia received the wash of the Liffey crew, which crossed over and took the Americans' water, in spite of being hailed by the umpire repeatedly. This ungentlemanly and unsportsmanlike trick, unknown to American amateurs, is one of the distinguishing traits of the English snob at the oar. Finally, Columbia finding herself being pressed ashore by her tricky opponent, sheered out to pass, and in so doing, fouled the Dublin crew, the referee promptly deciding against Dublin. The Shoes in the meantime had been at their old tricks and came in brilliant winners, one hand on their oars and swinging caps in the other. John Bull became disgusted. This was the second race of the day, and the second in which America proved herself too much for his best sons. The second heat for the Stewards Cup was won by the London Rowing Club in 8m. 23s., against the 8m. 4s. of the Michigan crew in the first heat. The second heat for the diamond sculls was won by Lowndes, Mr. Lee, of Boston, having been readily defeated. In the first heat for the Visitors' Cup, between two English crews, the Hertford College Crew of Oxford won in 9m. 12s., after taking a foul.

The last race of the day was the second heat for the Visitors Challenge Cup. The competing crews were the Columbians, as before given, the University College, Oxford, and Jesus College, Cambridge. The names and weight were as follows:

University College, Oxford—S. Sandbach, 160lbs.; G. D. Rowe, 164lbs.; W. H. Cross, 181lbs.; W. A. Ellison, 155lbs.

Jesus College, Cambridge—W. W. Baillie, 149lbs.; C. Gordon, 181lbs.; T. E. Hockin, 169lbs.; E. H. Prest, 157lbs.

The three crews made an even start. At the half mile America had left the inferior oarsmen of Britain in her wake, and crossed over to the Berks shore. The Jesus College crew now made a dash for the Columbians, with the deliberate intention of fouling, so that the other English crew might go by. This was another exhibition of the spirit which seems inseparable from the amateur oarsmen of England, but which would not for a moment be tolerated in America. But Columbia was too quick for any such trick, and ran clear away from the discomfited Bulls, widening the gap clear up to the finish. Jesus College essayed a spurt at the last quarter, but it did not amount to much, Columbia crossing the finish with a lead of two lengths, Oxford second and the other English crew bringing up the rear.

Second Day.—In the final heat for the diamond sculls Moss won, and the sculls Lee so richly deserved go to the Englishman. Mr. Lee will probably meet Moss again on the 17th or 18th inst. on the lower Thames, when the tables will probably be turned. At two o'clock the Columbia and Hertford College crews were sent off, the former pulling 40 and the Hertfords about the same. At Fawley Court Columbia led by a length, the Hertfords finding it impossible to close on them after repeated spurts. A crowd of Oxford lads coached their comrades all along the shore, and finally seeing it impossible to do anything with honorable means, sung out to the Hertfords to spurt and foul Columbia. This was the third instance in these few races that Englishmen allowed their envy to rise beyond their discretion, and stooped to unsportsmanlike conduct in the hope of at least preventing America from winning, as long as they could not themselves. Such is the gentleman amateur of England at the present day! But Hertford could not raise the wind or muscle to foul Columbia, and so the British trick was foiled by American prowess. The Hertford crew finished up ignominiously by running into the mud. Columbia then paddled in an easy winner, time 8m. 41s. In the final heat for the Stewards Challenge Cup, the Michigan crew met the London four. The Shoes again took the lead, but the London men had caught up again at Fawley Court. The bow oar of the Western crew then called on his men for the usual spurt, but one of them failed to respond for any length of time, though they again went ahead of the Englishmen. No. 3, of the Shoe-wae-cae-mettes, Mr. Joseph Nadeau, suddenly gave out, being ill, and having been sick even before the start. The London crew then went rapidly ahead, the Americans soon ceasing to row. London crossed a winner technically in 8m. 26s. The remaining races were of a local character only, and call for no notice. In the evening Lord Carnarvoys presented the prizes, and in banding over the Visitors' Cup to the Columbia crew, made an acceptable speech, and the two days' sport came to an end. The members and weights of the London crew are appended:

Sleb Smith, 156lbs.; F. S. Gulston, 177lbs.; A. Trower, 180lbs.; F. L. Playford, 170lbs.

BOSTON CITY REGATTA.—Unlike our New York city fathers, those of Boston have devised worthy means of celebrating the nation's holiday without din and confusion, and the absence of an official programme altogether. They have met the wishes of the citizens by offering liberal prizes for regattas open to all, both at the oar and sail. Five races were announced for the day, to be pulled on the Charles River during the afternoon,

July 4. The race was for single sculls. Five men came to the line. At the word "Go" Johnson, the well-known colored knight of the oar, at once took the lead, Lane second, Morris third and Lynch fourth. At the mile Morris spurted and closed up on Johnson, but could not run up even, Frenchy turning first with a good lead. He kept to the front easily all the way home, winning in 21m. 42s., Morris pulling in leisurely, saving his wind for the four-oared race. In the second race for double sculls three crews started: Hill and T. C. Butler; Hegner and T. F. Butler; and McGahey and Hosmer. Hill and Butler got off first, but were lapped soon by McGahey and Hosmer. Before the turn, however, they had regained first position, and kept it all the way home. Time, 22m. 6s. For the pair-oared race the following entered: The Ward Brothers, Biglin and Mahoney, Casey Brothers and Conwell and O'Brien. The Caseys got the best of the start, Mahoney and Biglin second, and the Ward Brothers third. Mahoney and Biglin spurted up to 40, took the lead, but were passed by the Wards, who turned first with a lead of three lengths. Conwell and O'Brien had been doing good work, and turned second. This order was maintained, the famous Ward crew coming home in 20m. 35½s., Conwell and O'Brien second. In the race for four-oared worklug-boats there were ten starters. The Lakeman crew got away first, with the West End and House crews closely following, the rest some distance in the rear. The race soon resolved itself into one among the first two boats. The course was a mile, three times over. West End made the turn first. At the second mile both crews were neck and neck and they went off on the home stretch together, West End making a neat turn inside their competitors. The last turn was made by the Lakemans first, West Ends next, and Chelseas third. The finish was as follows: Lakemans, first, in 27m. 15s.; Chelseas second, in 27m. 24s., and West End third. The last race was for four-oared boats, and three crews came to the line: Portland crew, Boston B. C. and Biglin and Mahoney crew. They kept well together the first half mile, pulling a stroke of 40. Boston gradually went to the front and Portland met with an accident. Boston came in winner in 27m. 13s., finishing up with a stroke of 36, Biglin's crew 19s. behind.

METEOR BOAT CLUB.—The members of this club held a series of races, July 4, at their club-house in the Elysian Fields. In the first single scull race Messrs. Myers and Allers, two new hands, were the contestants. They could not keep their boats, and finally went home wiser if wetter. Second race was for single sculls. Entries: F. Walters, H. Miller, and B. L. Dusenbury. Walters led, Miller broke an oar, and Walters came in winner in 5m. 40s., Mr. Dusenbury pulling in a working boat. In the third race C. Schoenfeldt bent J. Foster in 7m. 30s. The four-oared gig race was won by R. Kannerman, bow; H. Allers, stroke; F. Chipchase, 1; P. Otman, 2; C. Schoenfeldt, coxswain. Time, 5 minutes. The pair-oared race was won by L. Meyers and B. L. Dusenbury. Time, 6 minutes 20 seconds. The 100-yards tub-race was won by C. Schoenfeldt.

ALBANY REGATTA.—The municipal authorities held an open regatta July 4 at the State capital. The four-oared shell race was won by the Olympics, of Albany. The Saugerties Club were leading somewhat until they run against an abutment on the home stretch. The second race for four-oared shells was won by the Mutuals. In the single scull race F. E. Holmes, of the Pawtucket, R. I. Club, won. In the double sculls Davy and Thomas, of the Mutuals, won, and in the race for six-oared gigs the Olympics led the Mutuals five lengths.

ARGONAUTA ROWING ASSOCIATION.—This club held their annual regatta July 4, the event proving very successful and entertaining.

VALENTIA BOAT CLUB.—The fourth annual regatta of this club took place July 4 off the Elysian Fields, Hoboken. The senior single scull race was won by E. W. Wagner in 6m. 45s., and the junior single scull race by A. Schultz in 7m. 32s. E. Banger and A. Southard won the pair-oared gig race in 6m. 30s.

FLUSHING BAY REGATTA.—The Nevens Boat Club held their second annual regatta at Flushing July 4. The first race was with four-oared gigs, three entries, mile course, and was won by the blues. Time, 7m. 22s. The second race was by the same, two entries, and was won by the blues. Time, 8m. 46s. Both crews won by about four lengths. Messrs. F. A. Guild and F. F. Northrup were the strokes of the winning crews.

HANLON'S VICTORY AT BROOKVILLE.—The four-mile race at Brookville, Ont., for professionals took place July 1, and resulted again in favor of the Canadian champion. The entries were: Hanlon, McKen and Elliott, Toronto; D. Kennedy, Lowell, Mass.; J. A. Kennedy, Portland, Me.; F. A. Plaisted, New York; James A. Ten Eyck, Peekskill, N. Y.; J. A. Riley, Saratoga, and Pat Luther, Pittsburg. They were spaced twenty-five yards apart, the St. Lawrence being about a mile wide at the place of the start, off the Brookville and Ottawa Railway wharf. The turning buoys were opposite Maitland village. First prize, \$500; second, \$300, and third, \$200. Hanlon was of course first choice, and Plaisted and McKen were second. Colonel Sbow, the American Consul at Manchester, acted as referee. At 5h. 42m. the men were sent off. Hanlon went to the front at once, and led four lengths at the first quarter, with a stroke of 30. At the half mile he led by seven lengths, and Kennedy, McKen and Plaisted close together. The turn was made in the following order: Hanlon, Kennedy, McKen and Plaisted together, Ten Eyck, Riley, Elliott and Luther last. Hanlon soon increased his lead to ten lengths, and slowed down to 28. Among the rest Plaisted worked to the front, Kennedy and Riley following, and McKen capsizing. They finally crossed the line as follows: Hanlon, Plaisted, Kennedy, Riley, Ten Eyck, Elliott, Luther, McKen. Time of winner, 29m. 30s. Hanlon left next day for St. John, N. B., where he will row Wallace Ross on the 25th inst.

HANLON AGAIN VICTORIOUS.—In the single scull race at Cape Vincent Hanlon came in first, Plaisted second, Kennedy third, McKen fourth.

COURTNEY AND HANLON.—Though it was stipulated, for some occult reason, that the United States representative should not be admitted to the Brookville races, there seems a fair prospect of the Canadian and American oarsmen meeting in September. Hanlon has been in training ever since April, and desires a rest before meeting the toughest man he has to tackle in America. Courtney has all along been willing to meet the Canadian, and it is to be hoped that as soon as both have made all the money out of the small fry to be picked up, something may come of the much-talked-of match between these two knights of the oar.

COURTNEY-DEMPSEY RACE.—As might have been expected, this race turned out simple play for Courtney. It was the

fourth time the two had met, heretofore always without result. This last race was pulled July 4, the course running south from the village of Skaneateles, two and a half miles and return. Charles H. Poor acted as referee. At the mile the two were eight lengths apart; at the turn Courtney was over a minute ahead. He paddled along leisurely at a 28 stroke, finishing with a long lead in 39m. 15s.

NORTHWESTERN ROWING ASSOCIATION.—At the special meeting of June 12 it was resolved to hold the coming annual regatta jointly with the Detroit River Navy, at Detroit, July 23, 24 and 25; the latter to make all necessary arrangements, but not to be responsible for any expenses incurred by the other organization.

NARBAGANSETT BOAT CLUB.—A challenge has been issued from the Providence Club to the Dauntless Boat Club for a race in six-oared boats, to remain open until July 15.

BRASS BUTTONS AT THE OAR.—Seven members of the New York police force had a race on the Harlem, July 3. All backed out but three, Gilligan and Phillips of the Broadway Squad, and Walsh of the 29th Precinct. Phillips came in winner, time 31½m.; Gilligan second, and Walsh distanced. Course 2½ miles, including one turn.

CANOEING—STOWAGE IN CANOES.—We take the following letter, by F. B., from our contemporary, *Pacific Life*: "Sir—I was thinking that instead of using a rubber bag, as is used in the *Rob Roy*, or storing behind an open bulk-head in the *Nautilus*, or using hatches water-tight in the *Shadow Canoe*, build a perfectly water-tight bulk-head directly behind the seat, and, having two water-tight doors opening on each side, about five inches from the floor. The canoeist can thus in heavy weather reach directly at the side and get any article of comfort that he wishes. In the *Shadow Canoe* the canoeist has to reach forward or crawl aft to get at the water-tight hatch, at the risk of the canoe dumping him into the water without his consent; and this bulk-head does not interfere with the sleeping accommodations, as the space between the middle bulk-head and forward one is over six feet, thus allowing abundant sleeping room, unless the person is of the Friedlander build."

RICE LAKERS.—Although cheaper than home-built canoes, and suitable in many cases where the more complete and costly *Shadow*, *Nautilus* or *Rob Roy* is not desired for up-river navigation and hunting, we hear from a Canadian canoe builder that he cannot succeed in selling many of his boats in the United States, owing to the tariff of thirty per cent., which people do not seem willing to pay. The same builder is engaged on a large order for the English market.

CANOE-RACING.—So far there has been no regular canoe race this season. We had hoped to see such races engrafted upon the programmes of some of the boat clubs, but as yet nothing has come of this. Canoeists had better start an open race on their own account. If properly brought to the public notice there will be no lack of entries.

CANOEING—Boston, July 1.—Our boat was a common canvas canoe, ten feet long. We started at the bridge over the estuary which connects Billington Sea with the Meadows. We had hardly started when suap I went my friend's paddle, and he relieved his mind by quoting Scripture. Arriving at Billington, we found it somewhat rougher than we would have wished to try our light craft upon, but we were bound on a cruise and nothing short of our boat's sinking could stop us. Accordingly we laid our course for Little Island, which we reached after twenty minutes' hard paddling. Rounding the southern point of the island, up with a merganser, and bang! went my friend's gun, and down dropped the bird. After picking him up we started for Cotton's Dam, where we arrived without further incident. Proceeding up the stream, I had the good fortune to obtain a shot at a weasel, but somehow or other he disappeared and I have not seen him since. We went on for about a mile further, when we were obliged to return on account of the choked nature of the stream. We arrived in town in time to take the afternoon train for home, which we reached at 6 p. m. rather tired, but well satisfied that one of the best sports is canoeing, and the best place in Massachusetts to pursue it is in Plymouth County, on account of the large number of ponds and streams and the easy carrya.

W. D.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.

Trout, *Salmo fontinalis*.
Salmon, *Salmo salar*.
Salmon Trout, *Salmo confinis*.
Land-locked Salmon, *Salmo gairdneri*.
Black Bass, *Micropterus salmoides*.
M. nigricans.
Muskalonge, *Esox nobilior*.
Pike or Pickerel, *Esox lucius*.
Yellow Perch, *Perca flavescens*.

SALT WATER.

Sea Bass, *Centropristis striata*.
Sheepshead, *Archosargus probatocephalus*.
Striped Bass, *Morone americana*.
White Perch, *Morone americana*.
Weakfish, *Cynoscion regalis*.
Bluefish, *Pomatomus saltatrix*.
Spanish Mackerel, *Cyprum maculatum*.
Cora, *Cyprum regale*.
Bonito, *Sarda planiceps*.
Kingfish, *Menticirrhus nebulosus*.

TROUT FLIES IN SEASON FOR JULY.

Little Egg, No. 12.—Body and feet of orange and yellow, molish and hare's ear mixed; wings, bright hyaline, slightly mottled; setae, same as wings.

Lightning Bug, No. 10.—Body of equal parts, of dark brown, and black mixed, tipped with yellow; feet, of feathers from the English grouse; wings, double, the inner wing black, the outer wing a yellow brown.

General Hooker, No. 9.—Body made of bright yellow and green, ringed alternately; feet; red hackle; wings, of the tall feathers of the ruffed grouse.

Little Claret, No. 11.—Body and feet, dark claret mohair, slightly flogged with blue; wings, of the bittern, or brown hen; setae, dark brown.

Claret Fly, No. 9.—Body, dark claret; feet, black; wings, of the brown hen.

Petid Green, No. 16.—Body, feet and wings, a pale green.

FISH IN MARKET—RETAIL PRICES.—Bass, 20 cents; blue fish, 7; salmon, 20; weak fish, 10; Spanish mackerel, 15; green turtle, 10; halibut, 15; haddock, 6; king fish, 18; codfish, 6; black fish, 10; flounders, 8; porgies, 6; sea bass, 15; eels, 18; lobsters, 10; sheepshead, 18; Canada brook trout, 50; do. Long Island, 21; pompano, 50 cents; whitebait, 21; hard crabs, per 100, 23; soft crabs, per dozen, 21.25.

Spanish mackerel have been taken in small quantities off Long Island and New Jersey coast, and are selling for 50 cents a pound. Salmon coming in in limited quantities. Striped bass scarce. Soft crabs are abundant. Gray fish from Wisconsin are coming into market.

SALMON FISHING IN QUEBEC.—Since the government of the Dominion have protected the rivers, preventing netting and spearing, except in particular rivers, and adopting the plan of leasing them to gentlemen for fly-fishing only, salmon have certainly increased nearly fifty per cent. in numbers, and are much larger in form. The best opportunities are allowed for our Eastern sportsmen to go there and fish for salmon, at an expense of about six dollars per day per rod. Many gentlemen have taken from one to six fish per day, which sport is certainly of the most satisfactory character, especially when you take into account the fact that each salmon takes from fifteen minutes to one hour to kill. The river, Grand Metis, which derives its source from a chain of lakes some twenty-five miles long and enters into the Gulf of St. Lawrence, about thirty-five miles below Father Point on the south shore, is leased by the Hon. A. M. DeLisle, ex-Member of Parliament, and fished only by him and our old friend and neighbor, Malvius Hard, of 25 Beekman street, New York.

We have just received word that Mr. Hard has returned from the river, where he had unprecedented sport, killing his thirty salmon, some weighing as much as 42 pounds. The whole thirty fish scaled 702 pounds, making an average of 23½ pounds for each fish. Mr. Hard found the salmon unusually strong and gamy. They came this season much earlier than in former years, taking the fly with much eagerness.

PHILCSALMO.

A CANADIAN WELCOME.—A correspondent who has recently returned from a fishing expedition to the lakes near St. Leon, a Canadian village between Montreal and Three Rivers, writes:

"I must in some way do justice to my old friend, Mr. Wm. L. Parker, who, being necessarily absent, gave to five of us—three total strangers—*carte blanche* in his lodge. And royal sport we had, too. Procuring guides, and with Mr. Parker's canoes, we made an expedition to Lac à l'Isle, carrying over several portages. We found excellent sport, though the trout were small. Our trip to Lake Souris was similar to that to Lac à l'Isle, only the portages were longer and rougher. It is really astonishing to see one of those guides travel through thick woods with a canoe on his head. I consider myself a pretty good walker, but it was all I could do to keep up with these men. It must have been 1 P.M. before we put a line in the water, and we landed at our return (first portage) at six o'clock with seventy-two as fine trout as were ever laid in green grass, the largest fish, weighing 5½ lbs., caught by Mr. Floyd. These trout are speckled, and the flesh red, and are almost as game as a salmon. Mr. Floyd used a rod, trolling with a spoon. I have traveled a very great deal, and fished in Cape Breton, Nova Scotia, Maine, and West as far as Southern California, and nowhere have I ever seen such beautiful lakes and had such good trout fishing as in those surrounding Mr. Parker's property. By using portages one can go through twelve lakes from my friend's house. Mr. Parker has his canoes built at Peterborough, Ontario, and they certainly reflect credit on the builder. Should this letter be perused by an acquaintance of my friend, and who has never visited "Willie" at his country home, I advise him to fish for an invitation, for never was a gentleman possessed of means to entertain his friends who could more thoroughly do it than Mr. Wm. H. Parker, of St. Elie Lodge. S. C. H.

Niagara Falls, June, 1878.

—A. N. Shewan, Esq., of Montreal, is in New Brunswick to try his practiced hand on the salmon.

MASSACHUSETTS—New Bedford, July 3.—The quantity of bluefish caught is very great. The waters in this vicinity seem full of them. Several fine bass have been caught at Cuttyhunk and No Man's Land. Capt. J. L. Sisson launched his new pleasure yacht *Metrie* to-day, and in a few days will be ready for fishing parties, and no one knows where to catch the large bass or bluefish better than "Lafayette."

CONOMA.

MOVEMENTS OF THE FISHING FLEET.—The leading feature of the fish market the past week has been the large receipts of Georges fish, 56 arrivals having been reported, with 1,280,000 lbs. codfish and 17,000 lbs. halibut; the scarcity of mackerel along this shore keeps a large summer fleet upon Georges, and this branch gives better promise of successful operations than the mackerel fishery. The receipts of Bank halibut have been small, 5 arrivals bringing 175,000 lbs. and prices have ruled favorably. 11 mackerel arrivals have been reported for the week, but the receipts have not amounted to anything worth noticing. Whole number of arrivals for the week, 72. But little is known concerning the doings of the Bay fleet, but the catch has probably been small so far. One vessel is reported to have taken 300 blis. on the hook, which would indicate a good prospect for this fishery.—*Cape Ann Advertiser*, July 5.

SALMON IN THE CONNECTICUT RIVER.—Desirous of learning whether salmon were still running in the Connecticut River, W. M. Hudson, Esq., Fish Commissioner of the State, has kindly sent us the following information:

"July 2—I learned to-day that three seines fishing at Glastonburg and Rocky Hill had taken respectively ten, six and four salmon, averaging about twelve pounds each, during the season. On the 7th of June a fifteen-pound salmon was speared at the foot of the Holyoke dam, and I believe that the person at fault has been prosecuted for the offence. On the 11th of June a twenty-pound salmon, and on the 17th of June a fifteen-pound salmon were hauled in by Chas. C. Smith in his seine, at South Hadley Falls, Mass., and when near the shore were liberated. These are all, so far as I know, that have been seen above the Mass. line."

NEW JERSEY—Kinsey's Ashley House, Barnegat Inlet, June 30.—Sheepshead still biting freely; from 200 to 300 taken daily. Bluefish plenty, but run small, from twenty to forty per boat taken. Blackfish never more plenty. J. Reeves caught on the Old Mediator in four hours over 100 fish. They run from one pound to 3½.

Barnegat House, July 5.—Bluefish are now in the bay in large numbers, and biting well. Our yachts came in as follows: Captain Wilburt, with Mr. R. L. Newcombe, of New York, 40 bluefish; Captain Anthony Parker, with Mr. Ed. Howell and friends, of Philadelphia, 56 bluefish; Captain Bill Predmore, with Messrs. Worthen and Aldrich, 41 bluefish; Captain John Bunnell, with Warnock & Co., of Philadelphia, 11 bluefish, 1 sheepshead, weighing 10 lbs.; Captain Forman Mathews, with Messrs. Dulong, Whiteley and Craven, of Philadelphia, 17 bluefish, 1 sheepshead; Captain Theo. Predmore, 63 bluefish, 2 sheepshead.

ARTHUR.

Forked River, July 2.—Bluefish have been biting well for the past week, and some large ones have been caught outside. Mr. D. Chamberlain caught a sheepshead weighing 12 lbs.

ARTHUR.

FISHING IN LAKE BORGNE.—Lake Borgne, La., formed by the Gulf of Mexico, offers as fine sport for anglers as any sheet of water we have in the South. The fish are not perhaps so game as those caught in the colder waters of the North, although there are some few species caught there that, were they fished for with the same tackle as is used for taking the striped bass off the New England coast, would require nearly, if not quite, as much skill. These are the redfish and speckled trout. The best place for taking these fish is close to one of the "coquilles" or shell-banks, of which there are a great many scattered over the lake, and which at high tide are covered from two to three feet, and which are the chief feeding places for these fish. In order to reach these banks a sail boat has to be taken from the mainland, and the start made to suit the hour when the tide is running in. Once at the place and the boat anchored, the fishing begins. The mode of catching them down there is to have a large cotton line, upon which from two to three large hooks, with brass snells attached, are fastened, and on each of these a half of a mullet is placed for bait, one end of the line being tied to the boat, and the other part thrown out as far as possible, directly over the submerged bank. The fish come in schools, and as they are very voracious it is not very long before you have a bite, sometimes as many as two or three fish striking at a time; then you have it, making your line whiz through the water, and if your tackle is not strong they will get away, unless managed with a good deal of skill. I am of the opinion, from my experience in fishing with the above described tackle, that it would take a very good fisherman to capture a ten-pound redfish with a rod and reel. The trout (as they are called there) are very game for a short while, but soon tire. In addition to the above fish, red snapper, sheepshead and an occasional striped bass are caught also, but in different localities. Of small fish, the croaker (so called from a peculiar noise it makes in being taken from the water) is the most plentiful. At times they bite very rapidly. As many as a hundred can be caught in an hour or two. For this kind of fishing hand-lines are used, and, consequently, but little sport in it. J. D. H.

MICHIGAN—Bay City, July 1.—As the Michigan Central R. R. have put a fast train on the J. L. & S. R. R. North, four to six hours will put you where all the lovers of Old Izak would like to be, among the famous grayling and trout. This famous country for game has been practically closed to the sportsman because of trains only running every other day, and only freight or logging trains at that. Now they run fast trains both ways each day except Sundays. This gives a man or a party a chance to go in and take grayling for supper the first day from Bay City, and to bring out fresh fish or game the day it is caught. You that are weary and want a few days' rest and a little sport, and easy access to it, can here find it. I do not invite you to come and destroy our grayling, but come and help to enjoy them as a true sportsman should—live and let live. It has been said to me that you do not want people to know where your game is. I do. There is not a tired man on earth whom I would not be glad to see and to give cheerfully the directions to go and take our game or fish, and more than all else, our pure air and water. I do not want to be called selfish: come and enjoy this great luxury with us; eat, drink and sleep as you never have since you were a boy; become young again, as you will in thought and action. When you return to your labors again, whatever they may be, it will be easier, and the memory of any man who enjoys the comforts of a week or more in the Northern woods of Michigan will ever turn to it with extreme pleasure; but woe be unto the man or men who come to catch game to sell; we cannot bear to thus see our beauties taken from us. This invitation is given especially to tired souls who need a rest—clergymen, editors, lawyers, merchants, M. D's, etc. I believe these beauties are there especially for you who love the solemn grandeur of the wilderness and need rest. We refer you, by permission, to T. C. Phillips, of Bay City and *Daily Tribune*, either by mail or in person as to the Au Sable, Manistee or Cheboygan Rivers and Lakes Higgins, Houghter and Otsego.

HOGGISHNESS.—Not a very refined word that! But one must adapt his vocabulary to the subject he is treating, and when the topic is an uninviting one, what wonder that impolite language presents itself? Hoggishness is a good old English word, signifying, in general, conduct becoming a hog; in particular, the action of sundry trout and grayling fishermen who have been exploiting on the rivers Boyne and Manistee, Michigan. Six hundred grayling for three men in parts of two days' fishing is, to be sure, a big score, but if we were one of the party we should never tell of it. It is too suggestive of the yank-em-out-before-any-one-else-gets-a-chance style of doing things. If these Michigan rivers are soon as barren of sport as a greedy fisherman's soul is of sportsmanlike sentiments, anglers may thank this display of—hoggishness.

WISCONSIN—Neenah, July 3.—A. J. Cooper, of Milwaukee, and his little boy caught, one day this week, forty-two, the next day, fifty-three black and silver bass. Weight of the fish was 189 lbs.

S. P.

WILDERNESS WISCONSIN.—We have several times called attention to the locality referred to in the following letter, which has been forwarded by Mr. Hallock, of this paper, who is now in Wisconsin. This letter is written by Mr. Pratt, Auditor of the Wisconsin Central Railroad, but we hope to have another from brother Hallock's own pen:

June 28, 1878.—During our tramp in the woods we visited two very beautiful and picturesque falls scarcely known to white men. The whole country about there is wild and broken, the streams run through gorges 75 to 100 feet high in solid rock. The falls are of this height. We went out and took a few trout in silver Creek where our car was set, but the water had not subsided enough to make good fishing and after a half hour's sport we came in to dinner. We caught enough for breakfast, however. The following morning we started from the railroad at Trout Brook two and a half miles north of Silver Creek, and after a delightful walk of two miles through mostly hard wood timber clear of undergrowth reached Lake Harriet. Fresh deer tracks interested the ladies especially, but we did not happen to see the deer. Last year at Trout Brook, in August, one was attracted by our camp fire

and his eyes glistened through the foliage until he was frightened away.

We reached Lake Harriet at about 11 A. M., and before long three of us were in the boat owned and paddled by our guide, C. W. Davis, who lives on a homestead at Silver Creek. As the three ladies of our party—the first white women who ever visited the lake, which itself was discovered last fall—were anxious to drop a line, the gentlemen were one by one left "lone fishermen" on extemporized rafts or logs while the guide returned for the fair ones. At 1 o'clock Mr. Davis proceeded to withdraw the picquets, as lunch time had arrived and on rallying on the reserve it was found we had the following strings of black bass: Two ladies, 27; gentlemen, 54 (the subscriber taking 30). We did not think it right to fish longer, but one of the ladies and two gentlemen thought they must catch a few more and went out for a short time and returned with 29, making a total of 110. They ran very even in weight, though the largest was but two pounds, but they were very gamy, D. M. Belden, of Milwaukee, an old bass fisherman, was with us, and said he never saw such fishing. We took along minnows, but one of the party who was left alone used a frog. We still fished, casting occasionally, and frequently would have one hooked before the hook was a foot under water. In honor of Mrs. Talbot, who caught 20 fish, we named the lake "Harriet." It covers perhaps 90 acres.

The night we left Milwaukee there was a violent storm at Ashland, and consequently the rock fishing was spoiled for three days it was so rough. They are taking large ones up Fish Creek, and it would seem fishing was never better. I would you had been with us, and send this brief account of a portion of the trip as it may be of interest. Wish I had time to describe the running of the rapids of the Elk and the excursion to Long Lake below Phillips, but this must suffice. The muskallonge (this don't seem the right orthography, but I must follow example of good men) are biting nicely up in Butternut, but we couldn't do everything, and left the choice of routes to ladies. They are trumps you may be sure or they couldn't have kept with us.

Yours, hoping to see you before winter, HENRY PRATT.

[Mr. Hallock and his wife contemplated being of the party named, but untoward circumstances prevented.—En.]

MINNESOTA—Hokah, July 3.—Fishing is first class, and bass and trout are being taken in large numbers. One hundred and twenty-seven trout taken by three rods one day last week. FINE SHOT.

WANNINISH FISHING AT LAKE ST. JOHN.

THE Wanninish or land-locked salmon are found in great numbers at the outlet of Lake St. John, situated about 120 miles by the Government road from Quebec, and 60 miles above Chicoutinia, the head of navigation of the Saguenay River. One of the comfortable passenger steamers of the St. Lawrence Steam Navigation Company leaves Quebec daily during the summer months for Chicoutinia, affording one of the most interesting trips on Canadian waters, taking in the beautiful scenery of the St. Lawrence to Tadoussac, and of the incomparable Saguenay its entire length. The angler will find salmon, sea, river, and lake trout, and, last but not least, the wanninish fishing in perfection. This word has been spelled by many writers differently, some wininish, other ooninish. A missionary priest assured me that Wanninish is the proper way. Certainly it is so pronounced by the inhabitants. It was my good fortune to form one of a party of four gentlemen who left Old Quebec City on Tuesday, the 11th June last, on the steamer St. Lawrence, which unmoored from the wharf, or rather pontoon, at 8 o'clock in the morning. The weather was cool and bracing, and the few passengers, including two newly married couples, very sociable and gay. At about noon the next day we landed at Chicoutinia, where the leader of our party (the Admiral) had some business matters to transact, which detained us until after 3 o'clock in the afternoon, when we found ourselves crossing the river in a large skiff called the ferry boat. Arrived on the opposite shore, two four-wheeled back board wagons, drawn by hardy Canadian ponies, were obtained to convey us, and a horse and cart to convey our provisions, tents and baggage, about fifteen miles over the very steepest hills, to the house of a family named Savard, consisting of five sons and a daughter grown up, with their mother. Two of the sons are married, and, with their wives and one child and six hired men, all live in one house, in fact, one large room and loft, the whole forming the happiest family of the size that I ever met. Their usual occupation is driving saw logs through the rapids and over slides, and some farming. We engaged four of them, with two canoes. After partaking of a good meal, cleanly cooked and nicely served, and spending a pleasant evening, we went to our clean, comfortable beds, high posted and surrounded with neat printed cotton curtains, and early the next morning we arose refreshed and ready to begin a day's journey in bark canoes, which were carefully repitched to cover leaks before being put in the water. Two of our companions were from New York, Messrs. Charles S. Milliken and Henry S. Gillespie, who were on visits to some of their friends in Quebec; the others being Lieutenant-Colonel Montizembert of the Canadian Artillery (B Battery) and myself (styled the Admiral). We Canadians each took a New Yorker in our respective canoes. With two men and a fair share of the luggage these tiny crafts looked fearfully frail and cranky for such loads, but the fishing fever was in us, and although we squatted down rather timidly at first, all fear of upset soon left us. We were paddled up stream against a stiff current for about fourteen miles. When we came to a two-mile portage each man shouldered a pack and one carried a canoe on his head, and away we marched, under a broiling sun, till we reached the head of the rapids, at about half-past five o'clock P.M. Our men set to work getting supper and pitching our tents. Milliken from off the rocks soon hooked a fine fish of about four pounds weight. This so spurred me on that I hooked two of the men to join me for a short trip. While supper was cooking we quietly slipped away, and before five minutes were over I was fast to a five-pounder, and found him the liveliest fish I ever played. No fifteen-pound salmon could have created more excitement; he dashed off soon as he felt the hook, leaping six times in rapid succession high out of the water, and then rushing down into the deepest hole, tugged away till he was worked up to the surface, when as soon as he caught sight of me off he went again like a shot, and kept up this kind of work till exhausted, and was landed by a hand net, when he had to be struck over the head to be made to lie quiet in the canoe.

I fished with an ordinary trout rod, ash butt, hickory centre

bottoms are covered with water, need I tell the intelligent reader the result?

We do not now need to go so far as on our previous hunt, but, gliding directly across the swift, but clear current of the great river, land at the first bit of dry ground. The water is some five feet above the stage at which we last saw it, and all the low grounds are covered. A long strip of timber runs up between two sloughs, and for this the boat is headed. It is about a hundred yards wide in the widest place; one edge is under water, and the other very nearly so.

As the boat touches and Horton jumps out, the well known twittering wing is heard just inside the brush, and Horton seems unconcerned; but Spot jumps out with a splash; Chase pricks his ears and makes a half point in the boat, on the sound only, and N. grabs his gun and shoots it off at the timber.

"Keep cool, and save your cartridges; you'll have plenty of use for them," says H. "You'd better take the outside, Newville, for you will get open shots in that way. Keep Chase to heel, and use him only to retrieve. I'll send you out plenty of birds."

N. takes the dry outside edge of the timber, while H. takes the inside, and we will follow him.

The sport is now such as is almost inconceivable to one who has never been so fortunate as to catch such rare occasions as the present combined situation of land, water, and birds affords. Spot is on an almost continual point, moving about only on a thievish walk, and stopping every minute or two to straighten out into icy grace. He is to-day on his very best behavior, and exhibits an extraordinary ingenuity in devising new forms of beauty into which to mould himself when he smells a bird.

His ingenuity in striking different positions is, however, fully equalled by that of the birds in flying. Nearly all of them are wider than those we saw on our last hunt, and do not lie so close to the dog. Many rise far ahead of him; many lie in the edge of the strip of timber and wheel away upward on the outside, dart backward down the line of the strip, or send across the open for another piece of brush, making most always a successful run of N.'s blockade. Some shoot upward to the tree tops and skim away over them; some whirl upward on a spiral course that requires extra judgment to keep from shooting behind or below them; some whisk away so close to the ground that their brown streak is scarcely distinguishable from it; while others hustle out of sight in a twinkling through some dense thicket.

Meanwhile, Horton is doing some elegant work. Of course, he misses some, as who will not, especially under such circumstances? Even the steadiest and most hardened nerves would become flustered by such fast rising of birds as we now see. To have a fresh bird bustling up as you go to pick up a dead one and, dropping the fresh one, see your dog on another point before you can get to either of the two dead birds, and then to have a couple more spring right and left in front of you before you can reach your dog, will turn into a shuttle the heart of the most experienced shot. At such times it is impossible to preserve that coolness which, though not always necessary for quick shooting, is indispensable for good shooting, whether quick or slow. The finger will sometimes betray one and pull the trigger, when the eye plainly sees that the gun is not in the right place; sometimes it will tremble and balk upon the trigger, and disobeys one's will to pull at the right time. Sometimes, when a snap shot is necessary, the gun fails to come to the right place as you throw it up, and it cannot be moved in time. Sometimes, when thrown up at a crossing bird, it comes, directly on, and the temptation to pull then, instead of shifting it ahead, is irresistible, and the shot goes behind. Sometimes it will strike, in coming up, an unnoticed branch or bush, or when wheeling suddenly, with heavy, swinging pockets, one is thrown out of balance and cannot catch it in time. These and a dozen other causes—above all, the mysterious "bad spell," which will at times attack the best of shots, make it impossible for any one to shoot without missing. Thanks to human infirmity that it is so. For my part, I am glad that I can never see the time when I shall never miss; for if such time should come, one half of my pleasure in shooting would be gone.

But in spite of all these troubles, the crack shot holds his own, and no exhibition of human skill is more beautiful than his shooting under such difficulties. Here he catches the line of a whizzing streak through the leaves, and like a flash of lightning the shot goes crashing across its path; there he trips with the second barrel before it gets ten feet further the whistling wing that escaped his first barrel. Now dropping on one knee as the bird flashes up into the foliage, the gun touching his shoulder and going off at the instant his knee reaches the ground, he clips a twittering pinion that it would seem impossible for men or gods to hit. Now following the course of a wild rising bird only by the sound of its wing, he catches it with a charge aimed a foot or two ahead of it, just as it crosses some small opening. Now, after a provoking miss, he cuts down the first of two birds rising together before it is fairly under way, and then, wheeling suddenly, makes the second turn a graceful somersault almost before the first one reaches the ground.

Such is the shooting that Horton now does, and in less than an hour from the time he enters the strip of timber pockets his twentieth bird, and is done for the day.

"An Utopian pancake!" I fancy some one exclaiming, as he reads this last sentence. Not at all, dear friend. Some such pancakes exist and feel far more solid satisfaction in enjoying such royal sport, like rational beings, than any one can in degrading it into hoggyish butchery. And instead of the slippery ice of arrogant assumption, such a man stands upon a rock of sense when he denounces pot-hunters and shrieks for laws to restrain them.

The habits of the woodcock on the upper Mississippi are somewhat different from those of the Eastern bird. They breed in about the same way, but on many kinds of ground, which at the East would be almost sure "find" for them, they are never seen at all. Though capital shooting may be had, it can be had only by those who know the ground, and how to hunt it. Sometimes, for miles, there may be good looking ground on which a cock is never seen; then suddenly hundreds of acres on which there are nearly always plenty. Some grounds are too sandy, some too sour, some too dry; while others look as nice as one could wish, with all the elements, apparently, of good grounds, except the birds.

The shooting varies, too, with the rise and fall of the Mississippi. Nearly all the sloughs and ponds are so connected with the river that a rise of a foot or two in it will cover the soft, wormy margins of mud around them, on which the birds feed, and thus scatter them over the bot-

toms; though, when the rise is just sufficiently great, it makes such shooting as described above.

If there ever was any well-founded doubt as to where the woodcock goes to moult, there is none about the birds that inhabit these bottoms. The birds bred here remain on the same ground all the summer, unless driven off temporarily by exceptionally high water. Instead of disappearing, they are generally more plenty in September; though this is owing, I think, not to the arrival of birds from below, but to the concentration of the native birds by the drying up of the highest feeding grounds by the usual summer fall of the river. At such times I have had the best shooting of the season, and though some are found in such stage of the moult that their wings make no noise in rising, they are still quick enough in flight, and the great majority a little too much so.

Partly because of the difficulty in finding them, but mainly because of the limited quantity of meat that strikes ground after a successful shot, the woodcock is not disturbed by the majority of hunters in this section. He and Bob White, and the dear little Wilson's snipe, that illustrious trio so near to the hearts of most Eastern-bred sportsmen, are regarded with contempt by many first rate shots and capital companions, to whom the superior avoirdupois of the "chicken" and duck possesses a far greater attraction. Hence the Eastern stranger who would enjoy the superb woodcock shooting of these grounds may receive no aid from resident sportsmen; though I will guarantee him the warmest welcome, most polite attention, and fullest information, if they do happen to know. To ask sportsmen to tell a mere stranger of their best preserves, is a little thicker cream than can be naturally expected to rise on even the richest milk of human kindness. And yet the average western sportsman is capable of just that extravagance. "Go West, young man," if you would find good cock shooting; but don't blame me if you don't happen to strike it at once.

The fall woodcock shooting here does not bear the same proportion toward the summer shooting that it does in the East. There the fall shooting is often the best, and would always be, if the birds were disturbed no more in summer than they are here. But here, after September, there is a capriciousness about the action of the birds that is annoying. Sometimes they will still be found on their summer haunts in great numbers. At other times there will be none there, but quantities of them on ground that contained not one in summer. The sapling-covered slopes, the sunny hillsides of second-growth timber that line the little muddy brook, grounds which in the East are such favorite autumn haunts for the royal bird, contain here scarcely one. They prefer rather the low scrub-oak, birch or maple thickets close to wet grounds, the reedy and rice-fringed edges of ponds and sloughs, and are often found in the thick, dead reeds that stand farther back on ground that was wet in summer. But at this time the only place to hunt is where the birds are, and not where they ought to be, and no reliable rules can be laid down upon the subject. Hence fall cock shooting here is always liable to be a swindle, that is, a swindle as cock shooting.

But upon or near the same grounds the sportsman will find enough other game to well compensate for his disappointment. From along the reedy or rice-fringed shores of the ponds and sloughs the little snipe often springs, with his impudent "Scap," and twists away on his erratic flight. Perhaps as you check his wayward wandering with one barrel, the beautiful wood-duck or teal springs from the thick rice which hid your approach, just at the right distance for that left, choke-bored barrel to operate upon. From the dry thickets between the sloughs the hoarse, resounding wing of the magnificent ruffed grouse startles you almost out of your wits, which you recover just too late, perhaps, to overhaul him. Upon the higher grounds, between the bluffs and the bottoms, Bob White, the darling, loafs around the sunny edges of stubbles, hazel brush, and sapling groves. Here, too, on those warm, still days, when they will occasionally lie, the pinnated grouse, now wild and vigorous, may be sometimes pacified. Here, too, those who want them may roll in billowy somersaults the swiftly-scudding hare, and here again the noble ruffed grouse goes booming through the thicket across your path. And close by the same grounds will be found the favorite stopping places of the great northern horde of quacking, squealing and honking barbarians; and there, at evening, one may take a stand, and while the air all around him shakes beneath a myriad rushing wings, stand and gaze in bewilderment without knowing what to shoot at.

PIGEON MATCHES.

CUSHNOC HEIGHTS GUN CLUB.—Augusta, Me., June 27.—Regular weekly practice; two traps, ten yards apart; fifteen yards rise, both spring at once; Paine's rules.

Fish.....	0 0 0 1 0 1 0 1 1 1 0 0	0-6
Glenard.....	0 0 1 1 0 1 1 1 0 1 1 1	1-7
Huggins.....	0 1 1 1 0 1 1 1 1 0 1 0	1-9
Thorndike.....	1 0 1 1 1 1 0 1 0 1 0 0	1-0
Mackie.....	0 0 1 0 0 0 0 0 0 0 0 0	0-0
Haskell.....	0 0 0 0 0 0 0 0 0 0 0 0	0-0
Dyer.....	1 0 1 0 1 0 0 1 1 1 0 1	1-7
Farnham.....	1 0 1 1 0 0 1 0 1 1 1 0	1-8
Timber.....	0 1 0 0 0 0 1 0 1 1 0 0	1-5
Moore.....	1 1 0 1 1 1 0 1 0 1 1 0	1-9
Loufellow.....	0 1 0 1 0 1 0 1 0 1 1 0	1-7
Looney.....	0 0 0 0 0 0 0 0 0 0 0 0	0-0

Mr. Haskell and Mr. Mackie were unable to complete the shoot, and shot out six times each.

NEW HAVEN SHOOTING CLUB, July 4.—First match; Bogardus traps and rules.

Folsom.....	0 1 1 1 1 1 1 1 1 1	1-9
Jackson.....	1 1 0 0 1 1 1 1 1 1	1-7
Bennett.....	1 1 1 0 0 0 1 1 1 1	1-6
Howard.....	1 1 1 0 1 0 1 0 0 0	1-4

Ties shot off—Jackson, 2; Potter, 6.

Second match:		
Bennett.....	1 0 0 1 1 1 1 1 1 1	1-7
Folsom.....	1 1 1 1 1 1 1 1 1 1	1-8
Jackson.....	1 0 1 0 1 1 0 1 0 0	1-5
Potter.....	1 1 1 1 1 0 1 1 1 1	1-9
Bradley.....	0 1 0 1 0 1 0 1 0 1	1-5

Third match:		
Folsom.....	1 0 1 1 1 1 1 1 1 1	1-9
Bennett.....	1 1 0 1 0 1 1 1 1 1	1-7
Jackson.....	1 1 1 1 1 1 1 1 1 1	1-10
Gaines.....	0 1 0 0 1 0 0 0 0 0	1-2
Wilson.....	1 1 1 1 1 1 1 1 1 1	1-10
Strong.....	0 0 0 0 1 0 1 0 1 0	1-2
Sallsbury.....	0 1 1 0 1 1 1 1 1 1	1-7

Jackson won ties of ten with four out of five; Sallsbury won ties of seven with five straight; Potter ties of six with four.

Fourth match:		
Howard.....	1 0 1 0 0 0 1 1 0 0	1-4
Bennett.....	1 0 1 1 1 1 1 1 1 1	1-9
Jackson.....	1 0 0 1 1 0 1 1 1 1	1-7
Longdon.....	1 1 0 0 1 1 1 1 1 1	1-8
Gaines.....	0 1 1 0 1 1 0 1 1 1	1-7
Wilson.....	0 1 1 1 1 1 1 1 1 1	1-9
Strong.....	0 1 1 0 1 0 1 0 1 0	1-4
Jenny.....	1 1 1 1 1 0 0 1 1 1	1-8
Folsom.....	1 1 1 1 1 1 1 1 1 1	1-10
Hanson.....	1 1 0 0 1 1 0 0 1 1	1-6
Smith.....	0 1 0 1 1 0 1 0 1 0	1-5
Strong.....	0 1 1 0 1 0 1 0 1 0	1-4

Ties of ten, won by Folsom with four out of five; ties of nine by Wilson, with five straight; ties of seven, Jackson and Gaines tied on five, again on three, then on five, Gaines finally winning with five straight to Jackson's four.

Fifth match:		
Bennett.....	0 1 0 1 0 1 1 1 1 1	1-4
Folsom.....	1 1 1 1 0 1 1 1 1 1	1-8
Longdon.....	0 1 1 1 0 1 1 1 1 1	1-8
Penn.....	1 1 1 1 1 1 1 1 1 1	1-9
Jorey.....	1 0 1 1 1 1 1 1 1 1	1-8
Howard.....	1 1 0 1 1 0 1 1 1 1	1-7

Ties of eight, won by Sallsbury with five straight; ties of seven by Gaines with four; ties of nine divided. A match for ties between Hanson and Smith, won by Hanson with a score of seven to five.

Sixth match:		
Bennett.....	1 1 1 1 1 0 0 1 0 1	1-9
Gaines.....	1 1 1 1 1 1 0 0 1 1	1-12
Wilson.....	1 1 1 1 1 1 1 1 1 1	1-12
Penn.....	1 1 1 0 1 1 1 1 1 1	1-13
Jorey.....	1 1 1 1 1 1 1 1 1 1	1-13
Sallsbury.....	1 1 1 0 0 1 1 1 1 1	1-9

Ties of fourteen, won by Jorey with four out of five. Howard won a match of fifteen balls, with eleven out of fifteen.

Seventh Match—Balls thrown from the Cad's revolving traps; Bogardus rules to govern; 18 yards rise.

Penn.....	0 1 1 1 1 1 1 1 1 1	1-6
Gaines.....	0 1 0 0 1 1 1 1 1 1	1-9
Bennett.....	0 0 0 0 0 0 1 1 1 1	1-2
Smith.....	1 0 1 0 1 1 1 1 1 1	1-8
Strong.....	0 0 1 0 1 0 1 0 1 0	1-3
Hanson.....	0 1 1 0 1 0 1 1 1 1	1-6
Howard.....	1 0 1 1 1 0 1 1 1 1	1-3

Ties of nine, Folsom and Potter tied again on five each, Potter winning with five to two; ties of eight, won by Wilson with five straight; ties of six, won by Hanson with four.

New York—Cohoes, July 4.—Bogardus trap and rules, 21 yards rise.		
Lackman.....	0 1 1 0 1 1 1 1 1 1	1-6
Mills.....	1 0 1 0 1 1 1 1 1 1	1-8
Clute.....	0 1 1 0 1 0 1 0 1 0	1-3
McCollick.....	0 1 1 1 0 1 1 1 1 1	1-8
Newby.....	0 1 1 0 0 1 0 1 0 1	1-5
Laing.....	1 1 0 1 0 0 1 0 1 0	1-4
Calkins.....	1 1 0 1 1 1 1 1 1 1	1-8
Westover.....	0 1 1 0 1 1 1 1 1 1	1-8

Ties on eight—25 yards.

Miller.....	1 1 1 1 1 1 1 1 1 1	1-3
Calkins.....	1 0 1 1 1 1 1 1 1 1	1-2
Westover.....	1 1 1 1 1 1 1 1 1 1	1-3

Ties on six.

Lackman.....	1 0 1 1 1 1 1 1 1 1	1-0
McCollick.....	1 0 1 1 1 1 1 1 1 1	1-0

BUFFALO CITY PRIZE BADGES.—Match for prize badges offered by the City of Buffalo, July 4, fifteen birds, 21 yards:

Wm Scheibert.....	1 1 1 1 1 0 1 1 1 1	1-11
J E Pierce.....	1 0 1 1 0 0 1 0 1 1	1-10
D Kaufman.....	1 0 1 0 1 0 1 0 1 0	1-8
G Fleischman.....	1 1 0 1 0 1 1 0 1 1	1-11
A Kornelius.....	1 0 1 0 1 0 1 0 1 0	1-10
J Heier, Jr.....	1 1 1 1 1 1 1 1 1 1	1-14
George J Marsh.....	1 1 1 1 1 1 1 1 1 1	1-13
C Clark.....	1 0 1 1 1 1 1 1 1 1	1-13
J Franklin, Jr.....	1 0 1 1 0 0 0 1 0 1	1-10
H R Jones.....	1 1 1 1 1 1 1 1 1 1	1-16
George Smith.....	1 1 1 1 1 1 1 1 1 1	1-14
C Suckow.....	1 0 0 1 1 1 1 1 1 1	1-12
Robert Ward.....	1 1 1 1 1 1 1 1 1 1	1-16
O Heald.....	1 0 1 1 1 0 1 1 0 1	1-8
B M Saultz.....	1 1 1 1 1 1 1 1 1 1	1-14
Chas Kolb.....	1 0 1 1 1 1 1 1 1 1	1-10
W C Jaens.....	1 0 1 1 1 1 1 1 1 1	1-10
Chas Tabor.....	1 0 1 1 1 1 1 1 1 1	1-11
J P Fisher.....	1 1 1 1 1 1 1 1 1 1	1-11
John Heinz.....	1 1 1 1 1 1 1 1 1 1	1-11
V W Ringberg.....	1 0 1 1 1 1 1 1 1 1	1-10
H O French.....	1 1 1 1 1 1 1 1 1 1	1-12
S Thompson.....	1 0 1 1 1 1 1 1 1 1	1-12
J A Dingens.....	1 1 1 1 1 1 1 1 1 1	1-13
L Sutter.....	1 0 1 1 1 1 1 1 1 1	1-12
G R Vine.....	1 0 1 1 1 1 1 1 1 1	1-13
C Weiss.....	1 1 1 1 1 1 1 1 1 1	1-14
W H Jaeger.....	1 0 1 1 1 1 1 1 1 1	1-13
Jno Grobe.....	1 0 1 1 1 1 1 1 1 1	1-14
J B Seymour.....	1 0 1 1 1 1 1 1 1 1	1-12
Herb.....	1 0 1 1 1 1 1 1 1 1	1-12
A Bayha.....	1 1 1 1 1 1 1 1 1 1	1-10
J Kaffert.....	1 0 1 1 1 1 1 1 1 1	1-10
M Smith.....	1 0 1 1 1 1 1 1 1 1	1-7

Br K V Pierce.....	1 0 1 1 1 1 1 1 1 1	1-13
Ald Quinn.....	1 0 0 1 1 1 1 1 1 1	1-10
J B Higham.....	1 0 1 1 1 1 1 1 1 1	1-9
E S Williams.....	1 1 1 1 1 1 1 1 1 1	1-10
R Ambrose.....	1 0 0 1 1 1 1 1 1 1	1-9

Jones won first, Weiss second, Fisher third, Seymour fourth and Heinz fifth.

THE PALISADE GUN CLUB.—The club celebrated the Fourth in appropriate style on their grounds at West Hook. Delegates from several other clubs were on hand. A strong force from the Jersey City Heights Gun Club made their appearance rather late in the day. The Palisades embrace the elements of an excellent club. They have ample enclosed grounds, good accommodations of easy access from the city. When we mention that the Paynes (Jolly Ben and Kollieking Wat), with Von Lengerke (your well-known dog correspondent) are among its active members, we have said enough to ensure its prompt approval. The first event was the first-class club contest for a twenty-ball gold medal. Three Bogardus traps, with Bogardus rules to govern. The following is the score:

B S Payne.....	1 0 1 1 0 0 1 1 0 0	1-13
Wat Payne.....	0 1 1 0 0 0 0 0 1 1	1-7
H Von Lengerke.....	0 1 1 1 1 1 1 1 1 1	1-15
Oscar Heas.....	1 1 1 0 1 1 1 1 1 1	1-10
J Corbet.....	1 0 1 1 1 1 1 1 1 1	1-15
L Palmer.....	1 0 1 1 1 1 1 1 1 1	1-10
Fred Von Lengerke.....	0 0 1 1 1 0 0 0 1 1	1-6
Ed Collins.....	1 1 1 1 1 1 1 1 1 1	1-15
Justin Von Lengerke.....	0 0 1 1 1 1 1 1 1 1	1-15

P. Shark broke six out of ten and withdrew, after which a number of decidedly interesting sweepstakes at single and double balls took place. The shooting was kept up until a late hour.

PENNSYLVANIA—Bradford, June 28.—Two days' tournament at the Kendall Driving Park; wild pigeons; five plinge traps; 30 yards boundary. First match, class snout, five birds, single, at 21 yards.

Gun.		
Post.....	1 0 1 0 1 0 2	1-4
Babcock.....	1 0 1 1 1 1 1	1-4
Forsthe.....	1 0 1 1 1 1 1	1-4
Lelever.....	1 1 1 1 1 1 1	1-4
Layman.....	1 1 1 1 1 1 1	1-5
Williams.....	1 1 1 1 1 1 1	1-5
Stoddard.....	1 1 1 1 1 1 1	1-5
McKee.....	1 0 1 0 1 0 3	1-4
Barker.....	1 1 1 1 1 1 1	1-4

Ties on five—26 yards.

Layman.....	1 1 1 1 1 1 1	1-3
Williams.....	1 1 1 1 1 1 1	1-3

Second tie on three—31 yards.

Smith.....	1 1 0 1 2	1-4
Layman.....	1 1 0 1 2	1-4

Second match, 21 yards, five birds.

Smith.....	4	Dodge.....	3
Bally.....	4	Barker.....	6
Young.....	3	Williams.....	4
Post.....	4	Layman.....	4
Lunan.....	2	Corne.....	0
Babcock.....	4	Bradley.....	4
McKee.....	5		

McKewitt and Barker divided first money; ties on four won by Smith with three, at 26 yards.

Third Match—Sweepstakes; five single birds, 21 yards.

Smith.....	1 0 1 1 4	Williams.....	1 1 1 1 5
Post.....	1 0 1 1 3	Young.....	1 1 0 0 3

Layman and Williams divided first; Smith won second with three straight at 26 and 31 yards, Bally won third with three at 26 yards.

and not unwisely substitute the modern spring-lock for the old-fashioned out-hanging latch-string. You may enter at your own sweet will the open door of the village cottage (or you might have done so before the age of tramps), but in the city you are barred out by double door, immovable knob, intricate lock and burglar alarm, the precautions of men against men, inventions of ingenuities which have been quickened by suspicion and fear. Ideal hospitality presupposes perfect confidence between host and guest. Now, remembering that *FOREST AND STREAM* has a large and important constituency among those good-souled people who are ever ready to receive the stranger within their gates, and an equal number of readers among those who are annually received as strangers within these hospitable gates, we may, with satisfaction to all, draw this deduction, that the mutual confidence of host and guest owes its origin and continuance in a measure to the consciousness of each in his own worthiness and integrity.

But not to take a too serious and speculative view of it, the fact remains, as every sportsman knows, that in the rough welcome of the woods and the wilds is a heartiness and joyousness which are as refreshing in their way as is the fragrance of the forest. And so it comes to pass that with the after memories of the vacation's sport are woven the pleasant remembrances of new friendships formed and old ones renewed and strengthened.

SUN STROKE.—We make the following abstract from a circular issued by the New York Board of Health. Sun stroke is caused by excessive heat, and especially if the weather is muggy. [We may remark that sun stroke does not exist in the topics.] It is more likely to occur on the second, third or fourth day of a heated term than on the first. The time when people are most prone to be sun struck is between 11 and 4 o'clock. Wear thin clothing, sleep in carefully ventilated rooms, avoid loss of sleep and over-fatigue. Put a moist handkerchief in the hat; lift the hat off from time to time, in order to obtain ventilation. Do not check perspiration, but drink what water you need in order to keep up perspiration. If you feel fatigue, dizziness, headache or exhaustion, stop work at once. Sit down in a cool, shady place. Apply wet cloths, and bathe the face and neck in cold water. If any one is overcome with heat send at once for a physician. While waiting for the doctor give the patient cool water or cold tea. Pour cold water on the neck and wrists and apply pounded ice wrapped up in a towel to the head. When a person is pale and faint, with a feeble pulse, give some ammonia to smell and administer a teaspoonful of aromatic spirits of ammonia in two tablespoonfuls of water sweetened with sugar.

OUR WASHINGTON LETTER.

WOODCOCK SHOOTING—DOG AND GAME PROTECTIVE LAWS
—BLACK AND STRIPED BASS FISHING.

[FROM OUR REGULAR CORRESPONDENT.]

WASHINGTON, D. C., July 6, 1878.

The close season for woodcock expired on the first of July, and though these birds are quite plentiful in swamps and thickets in this vicinity, where they find plenty of food and are in excellent condition, they are not molested to any great extent before October, as the hot summer weather rather interferes with the sport of shooting them and makes it somewhat laborious. On account of the frequent rains this season, the birds have kept close to the thickets in low, marshy places, where the moist ground made it easy for them to procure an abundance of worms, and they have not been forced to the highlands, as they frequently are in dry seasons, to search for food among the leaves. There are quite a number of places along the line of the Washington branch of the Baltimore and Ohio Railroad which afford excellent woodcock shooting to the sportsmen of Washington and Baltimore, and at a point near Jessup's Cut there are so many swamps which they frequent that a number of dead birds have been picked up this season beneath the telegraph wires, which they struck in their flight. It is not a great while since I picked up a woodcock half dead beneath the telegraph wires on one of the busy streets of Washington, and only a minute or two after the bird had fallen. It must be remembered that the flight of the woodcock is always by night—indeed it may be classed as a nocturnal bird, as their principal feeding time is during the dusk of evening, when they frequently come to the edge of the swamp, rise clumsily into the air to the height of fifteen or twenty feet with a familiar whistle, and immediately descend to begin their feeding.

Reference to the shooting points along the line of the Baltimore and Ohio road brings to mind frequent complaints of negligence on the part of railroad employees toward dogs. I am glad to say such complaints do not apply to the road named. My experience in traveling over that road has been that the dogs are properly cared for, and the employees seem to understand their value to the owners. With other sportsmen, I only hope that the employees of other roads will profit by their example.

After the first of August, so far as the law is concerned, we can shoot ruffed grouse or pheasant, but, like the woodcock, they are saved to a great extent on account of hot summer weather. The young birds are now well grown and abundantly able to take care of themselves.

The first shooting worth speaking of will be at the ortolan (*Porzana carolina*) and reed bird (*Dolichonyx orizivorus*) in the early part of September, when they return from their breeding grounds in the north. I have seen the first named species so plentiful on the Patuxent marshes that it was an easy matter to kill two or three hundred upon a tide. The new game law of Virginia recently passed by the Legislature of that State makes no effort to protect these birds, I suppose for the reason that they do not breed within her borders. They are migratory, and merely stop a few days upon our

marshes on their return south. A great number of marshes in this vicinity are on the Virginia side of the Potomac, and the result of not protecting these birds in that State is to allow perpetual warfare upon them from the time of their arrival here, about the middle of August, when the birds are poor from their protracted flights, and not fit to shoot. They should be protected, at least until the first of September, by which time they are usually in good condition. Our new game law, just passed by Congress, very properly makes it unlawful to kill, or have in possession, either dead or alive, any ortolan or reed bird, between February 1 and September 1. These birds do not tarry here in their spring migrations northward, as they appear to be in a hurry to reach their breeding grounds; but upon their return in the fall, when the young birds are fully grown, they find abundance of food on our marshes in the wild oats, which are ripe at that season.

PROTECTIVE LAWS.

After a good many attempts and as many failures, we at last have a dog law which, if properly enforced, will rid the city of hundreds of worthless curs and protect the owners of valuable dogs. This law, of which I published a full abstract in a recent letter, passed Congress in the last days of the session, and was approved by the President. It provides for a tax of \$2 per annum, makes the dog upon which the tax has been paid personal property, and any person injuring or destroying the animal liable to a civil action for damages, and also to have committed a misdemeanor to be punished by fine and imprisonment. The owners of dogs are liable in a civil action for any damage done by such dogs. It further provides for a tax tag to be attached to the collar of each dog, and all not having such tag are to be impounded and destroyed. The name of the owner of the dog must also be upon the collar.

A bill for the preservation of game and protection of birds in the district has been passed forbidding any person from killing, exposing for sale, or having in possession, either dead or alive, any partridge, otherwise quail, between February 1st and November 1st, under a penalty of \$5 for each bird; any pheasant or ruffed grouse between February 1st and August 1st; any woodcock between February 1st and July 1st; prairie chicken or pinnaed grouse, between February 1st and September 1st; snipe or plover between May 1st and September 1st; wild goose, wild duck, or wild brant, between April 1st and September 1st; ortolan, or reed bird, between February 1st and September 1st; the penalty being the same as in the case of partridges first mentioned. The bill also makes it unlawful for any person to expose for sale or have in possession any deer meat or venison between January 1st and August 15th, under a penalty of twenty cents for each pound. It then forbids the killing of robins, blue birds, sparrows, blackbirds, and various other insectivorous birds found in the district, under a penalty of \$2 for each bird; makes it unlawful to destroy birds' nests under a like penalty for each egg or young bird destroyed, unless in the necessary prosecution of farming business. All traps, nets, and snares are forbidden under a penalty of \$5 for every bird or water fowl trapped, and a further penalty of \$20 for having in possession such trap, net, or snare. The bill next very properly prohibits the use of any gun in killing water fowl, except such as are habitually raised at arm's length and fired from the shoulder, under a penalty of \$5 for each bird killed with any big gun other than described, and a further penalty of \$25 for firing such gun at any water fowl, or having it in possession. Water fowl are not to be killed in the night time under a penalty of \$25 for each one so killed, and a further penalty of \$10 for shooting at such fowl in the night time.

Persons in killing birds for scientific purposes, or in possession of them for breeding, shall be exempt from the operations of the Act.

The concluding sections of the bill provide that any person who shall knowingly trespass on the lands of another for the purpose of shooting or hunting thereon, after due notice by the owner or occupant of lands, shall be liable to such owner or occupant in exemplary damages to an amount not exceeding \$100, and shall also be liable to a fine of \$10 for each and every trespass so committed. The possession of implements of shooting shall be presumptive evidence of the trespass. Owners or occupants of lands are to erect and maintain at least two sign-boards for every fifty acres, and any person tearing down, injuring, or defacing such sign-board shall be liable to a penalty of not less than \$5, nor more than \$25, for each and every sign-board so torn down, defaced, or injured. All shooting, or having in possession in the open air the implements of shooting, on Sunday is punishable by a fine of not more than \$25 nor less than \$10.

Such are the provisions of our new game law, a bill of eighteen sections, very carefully prepared. True, we have not an abundance of game within our original ten miles square, but it is a wholesome example for Congress to pass such a law, and it is to be hoped that State Legislatures and county authorities will profit by the example. Another great benefit derived from this law will be to prevent the sale in our markets of birds unlawfully killed in Maryland or Virginia.

BASS FISHING.

The black bass of the Potomac have finished spawning, and now take a fly readily in rapid water. In this river the best time for fly-fishing is just about the close of the spawning season, and before hot weather drives them to deep holes. Their preference seems to be a red and white fly, though I have caught them frequently with a dead minnow securely fastened to the hook and thrown into the rapids without a sinker. They quickly rise to the surface for it, providing the minnow is kept in motion. As the summer advances and the water becomes warm, the fish seek deep holes, and are then best taken with live minnow. To my mind, however, there is more sport in landing a pound and a half fish out of the rapids with a fly than in taking a two and a half pound one by still water fishing. While on this subject of still water fishing, I may mention the fact that many inexperienced anglers, or indeed many who have had years of experience, rarely pay attention to the size of the minnow with which their hook may be baited. To such I have only to say that this is an important consideration for successful bass fishing. A minnow three or three and a half inches long is not often swallowed by a bass at one or even two gulps. I invariably keep in mind the size of my minnow, and give the bass time accordingly to swallow it. I have seen many fine fish lost by too suddenly jerking the line, which would pull the minnow out of the mouth of the bass before he had the hook. Bass do not always take the bait like a rock fish or brook trout, with a rush and a gulp, but seem rather to prefer to swallow the bait first and then hold off.

ROCK OR STRIPED BASS

fishing near the Chain Bridge and the Little Falls of the

Potomac still affords some sport during the month of June, but it is the smaller fish only which rise to a fly. The larger ones prefer to loaf among the rocky crevices of deep holes whence they cannot be attracted to the surface by any deceptive bait. The only way to take them is by still water fishing, with half of a fresh herring cut lengthwise, securely fastened to the hook, which must be attached to your line about ten or twelve inches above the sinker. By this means fish weighing from six to ten pounds are often caught; but the smaller ones, weighing a half or three-quarters of a pound, readily take a fly of the white miller description in rapid water, and often afford rare sport. The rock fish are steadily decreasing in numbers year after year. In a recent conversation with Professor Baird, the U. S. Fish Commissioner, he spoke of this matter, and suggested the wisdom of laws by the State authorities to forbid the marketing of rock fish when less than twelve inches long, for the reason that they do not begin to spawn until they attain a weight of eight or ten pounds at least. All fish beneath that size should be treated as immature, and it should be a penal offence to sell, buy, or have them in possession. An effort has been made to prepare a law by the U. S. Commission, but the difficulty has always been in obtaining spawners. Some few years ago several ripe rock fish were found in the Roanoke river, North Carolina, and about 100,000 young fish were hatched from the spawn obtained. Every year an attempt has been made to procure spawners, but without success.

I have listened to the venerable Andrew Hancock, William H. Prentiss, and other anglers of their age with much interest when they told of the successful rock fishing at the Little Falls and near Eads Mill in days of yore. It was here that Daniel Webster, Crampton, the British minister, Judge Bihh, Gen. George Gibson, and others, who have occupied prominent places in the history of our own as well as other countries, brought many fine rock to gaff from the pools, eddies and rapids of those waters. The ancient legend of the phantom drummer-boy of the Falls has almost been forgotten, and we no longer hear stories of

"Strange phantoms rising as the mists arise."

Time has worked its changes, and even the Falls have not been exempt from its devastation. Old rocks, which have often supported the men whom I have mentioned, after standing the ice of many winters and the floods of many springs, have at last been worn away and swept into the remorseless deep. The grave has long since closed over nearly all of those who were witnesses of the scenes I have described, and the few hoary-headed ones remaining no longer cast the luring fly. Probably it is best for them that they are not able to even visit the Falls to witness the work of the hand which will so soon gather them into the valley of death.

R. F. B.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

Tennessee State Sportsmen's Association, Nashville, Dec. 2, Sect'y., Clark Pritchett, Nashville, Tenn.
Wisconsin State Sportsmen's Association.
Massachusetts State Sportsmen's Association, at call of President
Missouri State Sportsmen's Association.

SUPERVISORS AND PLAIN ENGLISH.—There has been a great deal of unnecessary dispute in this State over the authority of county supervisors to alter the game law. The only section in the law at present defining their authority is section 32, which reads:

"It shall be lawful for the Board of Supervisors of any county to make regulations touching other birds, fish or game, than those mentioned in this act, and such ordinance shall be published, etc."

Even without the italics, which are our own, this appears to us to be very plain English, which means, provided it means anything, that the supervisors may enact laws for the protection only of such birds, fish or game, as are not already provided for by the State law. If, for instance, the supervisors of a certain county wish to make a close season for woodchucks, they are by this section authorized to do so, as woodchucks are not mentioned in the protective law of the State. The supervisors, however, have no authority to legislate concerning woodcock, for the simple reason that the close season for those birds is already fixed by the State, and the supervisors can neither extend nor shorten it. We have heretofore expressed our conviction that this section of the game law should be interpreted in its obvious and common-sense meaning. We refer again to the subject because our attention has been called to the action of the Yonkers supervisors, who have extended the close season for woodcock in their county to September 1. The State law provides that woodcock shall not be shot before August 1, which is equivalent, we take it, to saying that after August 1 they may be shot. The Yonkers supervisors have no more authority, then, to say that they may not be killed after that date than they have to say that they may be killed before that date. We do not believe that their law can be enforced. We have received the following note upon this subject which we take pleasure in publishing, as confirming our view of the case:

"I have always interpreted the law to mean that the supervisors can only regulate other game than that mentioned in the statute, and cannot change what the Legislature has established. That would seem like common sense as well as common law, and the counsel of the Association for the Protection of Game took the same view; but there has been a decision of a court to the contrary, allowing the supervisors to add restrictions, not take from them, in any way they think best. A copy of that decision I sent to Mr. Thomas N. Cutbert, 46 Cortlandt street, attorney for our association, although I still doubt if the decision will be sustained on appeal.

ROBERT B. ROOSEVELT,

"Pres. Ass'n for the Protection of Game."

INFRINGEMENT OF THE GAME LAW IN WESTCHESTER COUNTY.—On the 19th of June Mr. John H. Davis, the game constable of Eastchester, arrested four persons for drawing a seine in Hutchinson's River, half a mile above Pelham Bridge. On

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, July 12.—Trotting at Hartford, Conn.; Columbus, O.; Sharon, Pa.; Watertown, N. Y.

Saturday, July 13.—Nova Scotia Yacht Squadron Race, Halifax, N. S. Creedmoor: National Guardsmen's Match; Skirmishers' Badge Match. Trotting: Sharon, Pa.; Watertown, N. Y.

Monday, July 15.—Louisiana Amateur Rowing Association Annual Regatta.

Tuesday, July 16.—Louisiana Amateur Rowing Association Annual Regatta. Trotting: Belmont Park, Phila.; Plainville, Conn.; Toledo, O.

Wednesday, July 17.—Harvard vs. Cornell, at Owaseo Lake. Creedmoor: Soldiers' Match; Competition for Gildersleeve Medal. Trotting as above.

Thursday, July 18.—Bevre Regatta (France); open to the world. Trotting as above.

ABOLISH SUMMER SHOOTING.

WITH the opening days of July the thoughts of most sportsmen turn to the summer cock shooting. Years ago, when FOREST AND STREAM was young, we devoted no little space to the subject of woodcock shooting in July, and expended many a quillful of ink in endeavoring to show that to kill these birds in July was unwise and productive of incalculable injury to general shooting. In these endeavors we were not without able coadjutors, who lent us the aid of both voice and pen. That our efforts were not wholly unsuccessful is indicated by the fact that, since the arguments which we then used were brought to the notice of the general public, three States—New York, Connecticut and Massachusetts—all of them noted for their large representation of the best class of sportsmen—have so amended their game laws that July shooting is no longer permitted. Long Island is, it is true, exempted from the force of the New York law, a fact over which those of the fraternity who shoot in Pennsylvania and New Jersey should lament, for it will be likely to more or less injure their fall shooting. The objection to, and supposed advantages of, summer shooting have been so often stated in these columns that it is scarcely necessary to repeat them at any great length. The whole matter is succinctly

discussed in the "Sportsman's Gazetteer," from which we may be allowed to quote a paragraph or two, as follows: "It is with pleasure that we notice the efforts made by gentlemen sportsmen of the country at large, in the direction of woodcock protection and the prohibition of summer shooting. Their efforts have been attended with success in some parts of the country, but until the law becomes universal a great deal of its usefulness is rendered nil. * * * Granting that woodcock four years out of five are in condition to be shot in July, how much better, how much more sportsmanlike, would it be to allow them to remain unmolested until autumn, when no doubt can exist of their being in full plumage, strong and vigorous on the wing, and without the care of a family?"

We cannot, however, admit, that woodcock are usually in a condition to be shot in July, for they are usually occupied at that time with their second brood. There is no doubt that whenever it is possible this species hatches twice. An instance clearly showing this has this year come under our own observation. A brace of cock hatched last April, and by the last of that month the young were quite well able to take care of themselves. They confined themselves wholly to a small patch of ground, and were started two or three times a week, always in the same piece and always the same in numbers; about June 24th the patch of swamp was visited, the usual number of birds were started, and in addition three younger birds, still in the down and hardly able to fly more than thirty feet. If the spring had been a little more backward (and it must be remembered that it has been an unusually early one), these last birds would have been still in ovo, and, when the July shooting had killed the parents, would of course have perished.

There is one reason why the killing of woodcock in the summer should be prohibited which has had but little attention paid to it in the past, although deserving a great deal. The ruffed grouse, by all odds the finest game bird known to the sportsman in the East, usually hatches its brood late in May, and by the 1st of July the young birds are about the size of quails. At this age they are very gentle, and will lie so close before the dog that we have more than once seen a young puppy catch them in his mouth. They are at this time slow fliers, and are so easily shot that a boy of twelve ought to be able to kill them three times out of five. Now we all know that in every community there are plenty of men who are just weak enough to be tempted by these fledglings, and who, knowing perfectly well what they are shooting, and that they are violating the laws of God and man, will, when they come upon a brood of young grouse during the July shooting, follow them up until not one of them is left. Any one who has lived in a good ruffed grouse country, where summer shooting is allowed, must have observed that the number of grouse seen in autumn is always very much less than was promised by the broods and old birds observed in early summer.

Summer woodcock shooting having been abolished in some States and not in others, let us see what effect the prohibition has had, and, if the general result has been a beneficial one, we may fairly call upon the residents of States where no such law is in force to show cause why similar provisions shall not be enacted, so that there may be at least one game law uniform throughout the land.

It is of course a difficult matter, if not an impossibility, to arrive at any definite and exact conclusions in a matter of this kind. Opinions will differ, and a man's judgment will be likely to be influenced by his prepossessions in favor of or against the law; but we may take the general opinion of the sportsmen of a single State, say Connecticut; one where the law has been in force only a year, and one in which the prejudice against the amendment was originally very strong. In fact this feeling was so strong that there was at first a vigorous effort to secure at once the repeal of the bill; but the counsels of the conservative prevailed, and the law was put upon its trial. Owing in part to the vigorous action of the Hartford Sportsman's Association, and to the individual exertions of the other workers for the cause in different parts of the State, there were comparatively few violations of the act, and when the fall shooting was over, public opinion in regard to its wisdom had completely changed, and it was universally approved. The testimony of the oldest and most successful shooters of our acquaintance is unanimous that fall woodcock were much more plenty than they had been before for eight or ten years, and that ruffed grouse, which nobody had thought of protecting, had never, within the memory of the oldest gunners, been so abundant. It was a veritable case of firing at the pigeon and hitting the crow. This, of course, only shows how the matter has worked in one State; but we venture to say that it is a typical example. And just think what a superb addition to the ordinary fall shooting the woodcock is. Suppose that there were no birds at all shot during the summer, would not a charm be supplied to the autumn days in the woods and fields which they now too often lack?

There are other birds which need summer protection, but we cannot discuss them now. That it is utterly useless to protect woodcock in our State when there is a market for them just over the border in the next, is perfectly obvious, and we look forward to a time when lawmakers shall have enough knowledge on the subject to legislate intelligently with regard to all our wild game.

—Professor Charles Linden, of Buffalo, N. Y., is off for Labrador with the Boston party of fifteen voyageurs.

HENLEY.

TO say that the victory of the Columbia crew over the best men of Old England's colleges at Henley was unexpected is to say what nine out of ten would aver if questioned. That a crew selected from hardly fifty haphazard candidates should have been able to give their wash to the men of an older country—men picked not from a mere handful, as with us, but chosen with care and deliberation from a thousand or more of able candidates at the oar; from men who were not green barely a year or two ago, but who had been brought up to the oar long before they entered on their college course, redounds immeasurably to the honor of those concerned and to the boating fraternity of our country. If the Columbias can thus easily vanquish the very best men of Europe, what could not a more powerful crew, selected from a greater field than one college affords, effect in competition with the oarsmen of England? Columbia left them over two lengths astern. Then, is it too much to say that a picked crew, chosen with the discriminating preference shown in England, could have left Hertford six lengths in their wake instead of two? The Columbias acquitted themselves bravely and return covered with honors of an enviable sort, but no one for a moment would claim the fortunate four to be invincible in our own country. A boatful formed of the best there is in Harvard, Yale, Cornell and Columbia would in very short time make victory over England at the oars as thoroughly monotonous as America has already made competition in shooting, yachting and pedestrianism. When, in addition to this great feat, we hear in mind that among the single-scullers as well America went to the fore and virtually won the race, though the prize goes to the Englishman on mere technicality, the superiority of American amateurs becomes all the more conspicuous. It seems incredible that Mr. Lee should have erred through mere oversight on his part as to the true finish. Is it not probable that he was misled in some manner? That any one should go three thousand miles to pull in an international event, should practice for three weeks and then not know where to find the finish line does not seem probable. We await with some interest further details concerning this peculiar mistake of Mr. Lee. However, as we understand he is to meet Mr. Moss again on the 17th or 18th inst., he will have an opportunity of righting the unnatural result of July 4 at Henley. The Shoe-wac-cae-mettes gave our cousins a lesson in the physical prowess of America, for, winning in one heat against no mean adversaries, their victory was certainly not to be laid at the door of superiority in style, training, science or finish, but they carried their colors to the fore purely on the strength of their muscle and wonderful stay. A pity that the latter failed them in the final heat at the critical moment, or Englishmen might have beheld the lamentable spectacle (to them) of a clean sweep at Henley by their only rivals in the world. The last heat can only be looked upon by them, at best, as a race either "off" or else won by a fluke, on account of an accident to the Monroe crew, through the chronic sickness of one of them, wrongfully withheld from his brethren. What the Shoe-wac-cae-mettes might have done with a substitute in the place of Jos. Nadeau no one can say, but it is certainly true that his crew were well able to hold their own with the famous London four, and had No. 3 responded to the regular call for a spurt, their chances of landing the Stewards Challenge Cup for their country were excellent. In summing up the results of Henley, Americans may congratulate themselves that in four events out of five our oarsmen showed undoubted superiority to the British, and that the fifth race was lost through an accident, Englishmen barely saving themselves from a clean sweep on their own waters of all prizes by men from foreign shores. Full of pride at our great victories on the Thames, our crews may well look forward with more than hope to similar events in the future, and to fresh additions to the laurel wreaths of victory wrested from the hitherto invincible champions of the world. When Americans again go forth to hoist the Stars and Stripes above the Union Jack, we trust that England will buy a decent sized river and not pull on a mud creek, and that she may teach her oarsmen to guard against any imputation of unfair and ungentlemanly conduct in their rivalry with others. American amateurs are not given to the display of envious passion, and would never stoop so low as did their English brethren in their vain attempts to snatch from their rivals at Henley well-earned victory. May our cousins across the sea take a lesson, then, from us for once. They can certainly do so to advantage.

CONCERNING THE HOSPITALITY OF THE WOODS.

IN another column a correspondent tells us of the kind welcome be received at some of the fishing grounds of Canada. Such expressions of grateful guests have often been a pleasant and characteristic feature of our sportsmen's correspondence.

"Gentle hospitality," saith the Sanskrit sage, "dwelleth not in palaces. Rather, seeking, shall ye find her in the tent of the desert;" and had he lived in our day, he might have added as well "in the log cabin of the frontier." For far apart as they are in other traits—one the exponent of roaming thriftlessness, the other of enterprise and energy—the nomad of the plains and the pioneer of the forest are alike in one thing—their simple, whole-souled hospitality. The conventionalities of town and city close the door to the stranger

The only Complete and Reliable Guide to the de-
lightful Fishing and Hunting Grounds of the Great
New York Wilderness. Gives all possible infor-
mation relative to Routes, Hotels, Resorts, Outfits,
Guides, Distances, etc., with amended railway
schedules, etc., Handsome 12mo. Flexible Covers,
Red and Gold, Maps, etc. Beautifully Illustrated,
Over 300 Pages. Price \$2.

TESTIMONIALS:

The instructions embrace everything that can be
desired. Taking it all in all it is the most complete
book that has been published on the Adirondacks,
not excepting even my own.—Hon. J. T. Headley.I regard your "Descriptive Guide" and the "Ap-
pendix" as a most useful, nay indispensable,
manual for tourists to that wonderful Wilderness.
A tour in that region is emphatically a practical mat-
ter, and to that I am I regard your "Guide" as
an indispensable, useful and timely publication.—Gen-
eral J. Loring.It is the only thing of the kind that has yet been
published—the very thing that has been so long
wanted and waited for.—Alfred H. Street, Author of
"Woods and Waters."Sent by mail on receipt of price, \$2, by

tleman or ladies who would cook simple, convenient
dishes in camp or up in the woods, this book has been
carefully prepared. Sent by all booksellers and dealers
in sporting goods. Pocket edition (cloth), price
50 cents, by mail. Publishers, GRAVES LOCKE &
CO., Boston, Mass. jyl1 11

Miscellaneous.

ANTI-FAT

ALLAN'S ANTI-FAT is the great remedy for Cur-
culence. It is purely vegetable and perfectly harm-
less. It acts upon the food in the stomach, pre-
venting its being converted into fat. Taken in
accordance with directions, it will reduce a fat
person from two to five pounds per week.
"Curculence is not only a disease itself, but the
harbinger of others." So wrote Hippocrates two
thousand years ago, and what was true then is none
the less so to-day. Sold by druggists, or sent by ex-
press, for \$1.50. Quarter-dozes \$3.00. Address,
BOTANIC MEDICINE CO., Prop'rs, Buffalo, N. Y.

Rational Pastimes.

CARRIER PIGEONS.—Pigeon flying matches, so popular in some countries abroad, are receiving some attention from a few fanciers in this country, particularly in New York and Pennsylvania. In the immediate vicinity of New York, Mr. J. Von Opstal, of No. 408 Madison street, and Mr. J. Waefelaer, of Garden street, Hoboken, have given most attention to the sport.

At a quarter to eight last Sunday morning two of Mr. Von Opstal's pigeons and three of Mr. Waefelaer's were started from Steubenville, Ohio. One of the former's birds arrived at No. 4 Lewis street, this city, at six o'clock Sunday evening, and one of the latter's arrived at Hoboken about the same time, making the distance—352 miles—in 10h. 15m. The other birds arrived about eight o'clock yesterday morning. About the 24th of this month a great flight will take place from Columbus, Ohio, which is distant on a straight line about five hundred miles. Prizes of \$100, \$50 and \$25 in gold are to be given, and the distance must be made within three days to secure a prize.

JACK GOULDING'S BENEFIT.—The testimonial benefit to Jack Goulding, the efficient trainer and track master of the New York Athletic Club took place at the Manhattan Grounds last Monday:

Seventy-five Yards Run—Won by W. O. France in 8½s; R. Thompson second.

Quarter-mile Hurdle—Won by W. J. Duffy in 1m. 40s.

One Hundred Yards Dash—W. O. Francis, handicapped 25 yds., won in 10½s.

One-Mile Run—Won by D. Dampy in 5m. 46½s.

One-Mile Handicap—Won by F. J. Mottin 7m. 32s.

One-Mile Walk for those who had never won a prize—Won by J. O. Williamson, Glenwood A. C., in 8m.

One-Half Mile Handicap—Won by F. Banham in 2m. 2s.

SHORT HILLS ATHLETIC CLUB.—The contests in the games of this club, at Milburn, N. J., last Saturday, were for handsome medals. The programme was as follows:

One Hundred Yards, handicap—Thirteen contestants; won by H. Loman, handicapped 6 yards; time, 10 3-5s.

Half-Mile handicap—Six contestants; won by G. De Ronge, handicapped 45 yards; time, 2m. 6s.

One-Mile Walk—Six competed; won by W. E. Barnes, handicapped 35s.; time, 7m. 43 3-5s.

One Hundred Yards, special—Three competitors; won by W. O. Wilmer in 10s.

Two Hundred and Twenty Yards—Four starters; won by A. Nael, handicapped 4 yards.

Four Hundred and Forty Yards Run—Four entries; won by E. C. La Montagne in 532-5s.

Tug of war between Manhattan A. C. and New York A. C. teams resulted in favor of the latter.

VALENTIA BOAT CLUB GAMES.—In the athletic sports last Saturday, on the St. George's Cricket Grounds, Hoboken, the results were:

The 100-yards dash, two entries, won by W. F. Saydam in 12½s. In the standing high jump, three entries, A. Schulte cleared 3ft. 5in., and was also the winner in the running high jump, clearing 4ft. 2in. Saydam won the 440-yard run, two entries, in 62s. Schulte was the winner in the running broad jump; distance, 14ft. 7in. F. Frummel was victorious in the one-mile walk, two entries; time, 9m. 10s. The 100-yard hurdle race, two entries, was won by Saydam in 16½s.

A tug of war between teams from the American Athletic Club and the Valentia Boat Club was won by the Valentians in 3m.

TEN BROECK VS. MOLLIE M'CARTRY.—The long-talked-of race, which has excited so much interest from the Atlantic to the Pacific, came off on the magnificent track of the Louisville Jockey Club, at Louisville, Ky., July 4. The result was disappointing, the California mare being distanced by the Kentucky champion, who won the four-mile race in 8m. 19½s.

HARLEM ATHLETICS.—The list of over one hundred entries for the Harlem Athletic Club Games, which are to be held on the Manhattan Grounds next Saturday, promises a fine display of muscle upon that occasion.

SUBMARINE PEDESTRIANISM.—Captain John T. Quire, of Cincinnati, O., proposes to walk from that city to Cairo, a distance of 25 miles, on the bottom of the Ohio river, in 25 days. He is to be accompanied with a float filled up with an air pump and other necessary apparatus, and the Captain claims the privilege of coming up to the surface whenever he shall deem it expedient.

—In describing the very fine archery goods for sale by Messrs. Holberton & Co., of Fulton st., an error was made as to the number of this house. It is No. 117 Fulton st. The bows are very excellent. Dr. Carver tried some of them, breaking a great deal of valuable property about FOREST AND STREAM office with the arrows, and ending by planting one shaft almost up to the feathers in the ceiling. Fortunately Mr. Beard, the well-known caricaturist, who dwells in the story above us, was not impaled.

FOOT BALL.—The Minton Foot Ball Club, of Jersey City, defeated the Alert Foot Ball Club, of New York, last Saturday.

CRICKET.—The Onondagas, of Syracuse, N. Y., last Thursday defeated the Bellville, Can., club by a score of 44 to 32 on first innings, the second being unfinished. What other result could have been looked for on the Fourth?

ST. GEORGES VS. PATERSON UNITED ELEVEN.—The St. Georges Cricket Club, of this city, Saturday, defeated the Paterson United Eleven at Haledon, N. J.

ZOOLOGICAL BILLS OF FARE.—The Philadelphia Zoological Garden caterers have a company of guests whose tastes are somewhat peculiar as well as expensive. There is the rhinoceros, for instance, who always takes the medal when the boarders eat for a wager. His rations of hay are two hundred and fifty pounds per day, and then he calls for a half bushel of potatoes for dessert. Within the last four years about ten tons of peanuts have disappeared down his cavernous and capacious maw. The hoarding house keeper who took him to board at \$11 per week would just about clear expenses. He eats ten times more—peculiarly—than the leopard and the jaguar. The seals betray the least regard for market bills. Their daily allowance is eighty pounds of fresh fish. The Chimpanzee brothers "Jack and Gill Livingstone" are perhaps the most interesting, as they are the most human in their way of eating. The Philadelphia Times thus describes their meals:

Their bill of fare is as follows: Breakfast, weak tea, with abundance of sugar and plenty of milk, and bread thickly spread with honey. The bouey, these strange people, whom the head keeper persists in regarding as only a little less than man and much more than beast, carefully remove, and when there is no more honey they dispatch the bread. At 10:30 in the forenoon they lunch. This refectory consists of fruit exclusively, chiefly bananas and oranges. About 3 o'clock they want their dinner, which consists of rice, tapioca or some such farinaceous food, served with sugar and sherry wine. For supper they have the same bill of fare as for dinner, with the addition of tea, prepared as for breakfast. Their method of feeding indicates not only the possession of a wonderful degree of adaptability to civilized customs, but of a desire to make progress in the way of table observances. They feed themselves with a spoon, and drink their tea from a cup with a degree of decorum that it would be a pleasure to witness in many children. Their board approximates in cost to twenty cents each per diem.

WHERE THE JACK RABBIT IS A BURDEN.—

Take a grasshopper, magnify him, give him a stump tail and a coat of fur, and you have a jackass rabbit. If the farmer of the far West beholds with dismay the incursion of the hopping insects, the farmer of the farther West has equal detestation of the jumping hare. The Idahoans are devising all sorts of ingenious tricks for their capture. One man has a brush fence, three miles long, with traps so arranged that when a rabbit jumps over he goes down into a pit, whence there is no escape save at the hands of one of the seven men who do nothing but pull out the captives. The average catch per day is four hundred; the ears are cut off, and the carcasses then devoured, skin and all, by some three hundred hogs, who are rapidly fattening for the market. The revenue derived from four hundred pairs of ears per day, at a bounty of two cents each, will help pay expenses.

THE BRAYTON MOTOR.—This engine is adapted for use in small yachts. It is a hydro-carbon engine, and is started upon the application of a match. The fuel used is crude petroleum, burned with atmospheric air under high pressure, power being produced by a series of rapid explosions resulting. It has been generally approved, and awarded a premium at the Centennial. A 5 H. P. engine has a cylinder 5in. diameter, weighs 1,500lbs., and costs about \$500. An 8 H. P. engine has a cylinder 9in. diameter, weighs 2,500lbs., and costs about \$600. These engines are manufactured in Providence by the Brayton Motor Co., and builders of small launches and yachts can get further details from them, so that they may compare weight, space and cost as well as running expenses, with the ordinary type of steam engine. Having had no experience with the Brayton Motor ourselves, we cannot vouch for them, but their performances will probably soon be placed before the public.

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

The Brooklyn Driving Park can be reached by the Fulton and Atlantic street cars in Brooklyn, or by the Prospect Park and Coney Island and Manhattan Beach Railroads.

Publications.

The Sportsman's Library OF STANDARD BOOKS. JUST ISSUED.

This Compilation Contains Brief Descriptions of Over One Hundred and Fifty Books Upon Outdoor Sports and Amusements, Together with Between Eighty and Ninety Splendid Illustrations of Game Birds, Fish, Horses, etc., Many of them Drawn from Life.

A most valuable compilation which should be in the hands of every sportsman, every one who wishes to acquire the art of shooting or to obtain information regarding game, birds, fish, horses, guns, equipments, etc. The trouble hitherto has been, the people have not known what works were issued on field sports and pastimes, or where they could be procured.—N. P. Stanton, Pres. National Rifle Association.

All interested in outdoor amusements will be gratified with this publication. To know the contents of the book mentioned will fit any man for the better employment of his time, and if the knowledge to be gained in this way is practically employed, better health and longer life will be the result.—Henry Fulton, Captain American Team 1816.

Orange Lightning Powder.

No. 1 to 7, strongest and Cleanest made, in sealed
 1 lb. canisters. Higher numbers especially are recom-
 mended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in
 metal kegs, 6 1/2 lbs. each, and canisters of 1 and 5
 lbs. each.

Orange Rifle Powder.

The best for rifle and all ordinary purposes.
 Sizes, FG, FFG and FFFO, the last being the finest.
 Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs.
 and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less
 recoil than any other brands made, and are recom-
 mended and used by Capt. A. H. BOGARDUS,
 the "Champion Wing Shot of the World."

BLASTING POWDER AND ELECTRICAL ELAST-
 IC APPARATUS. MILITARY POWDER

of all kinds on hand and made to order.

Gunpowder.

THE
HAZARD POWDER CO
 MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of
 strength and cleanliness. Packed in square canis-
 ters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and
 6 1/2 lb. kegs. A fine grain, quick and clean, for
 upland prairie shooting. Well adapted to shot-
 guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters
 and 6 1/2 lb. kegs. Burns slowly and very
 clean, shooting remarkably close and with great
 penetration. For field, forest or water shooting, it
 ranks any other brand, and it is equally serviceable
 for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG, and "Sea Shooting" FG, in kegs of 25,
 12 1/2 and 6 1/2 lbs., and cans of 5 lbs. FFG is also
 packed in 1 and 1/2 lb. canisters. Burns strong and
 moist. The FFG and FFO are favorite brands for
 ordinary sporting, and the "Sea Shooting" FG is
 the standard Rifle powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON & MUSKET POWDER;
ALSO, SPECIAL GRADES FOR EXPORT OF
ANY REQUIRED GRAIN OR PROOF, MANU-
FACTURED TO ORDER.

The above can be had of dealers, or of the Com-
 pany's Agents in every prominent city, or wholesale
 at our office. 83 WALL STREET, NEW YORK.

Painting.

PAINTING.

EVERY ONE THEIR OWN PAINTER.

50 Per Cent. Saved.

We are manufacturing a very fine Pure Ready-
 mixed Paint, mixed in such a manner that any ordi-
 nary stable or farm hand can make as good a job
 painting as a painter can with paint mixed in the old
 way. This is because our paint does not set quick,
 and thus shows marks of the brush. We sell it lower
 than materials can be bought in the ordinary way,
 and pay freight on certain sized orders.

Any one wishing to Paint, will have mailed free,
 upon application, our book—"How Every One can
 Paint and Select Harmonious Colors." Address
 INOERSOLL PAINT WORKS, South and Dover
 streets, New York.

Medicinal.

BRANDRETH'S PILLS.

We believe these celebrated pills are pre-ordained
 by their inherent merits to be the medicine of
 the world. They impart a power by which every
 organ of the body becomes healthy. Nature has
 formed the bowels so that they are capable of draw-
 ing to them the impurity of any organ of the body,
 however distant. So we have little more to do when
 we are sick than to purge freely with a medicine
 time has proved will not hurt. This treatment
 always quickly restores the health when adopted in
 time.

BRANDRETH'S PILLS

cure both constiveness and diarrhoea. Ask the man
 who was dying from constipated bowels what cured
 him; he tells you Brandreth's Pills. Ask him who
 had dysentery for months what cured him; he says
 Brandreth's Pills. They are the best medicine for
 Small Pox, and they prevent any marks. A case oc-
 curred recently where Brandreth's Pills cured a
 deep ulcer of the foot, which the doctors said could
 only be removed by amputation; yet twenty-five
 boxes cured it and restored the patient's health.
 Reference W. M. Skinner, of White Plains.

Brandreth's Pills are not a quick medicine, but a
 scientific preparation, which have been prepared
 by the present proprietor for over fifty years. They
 are wholly composed of innocent herbs and vegeta-
 ble essences, are incapable of hurting the most deli-
 cate, yet sure to cleanse the bowels and blood and
 exert a curative effect upon every form of disease.
 Where for twenty years the patient had no move-
 ment of the bowels without medicine or mechanical
 means, a month's use of Brandreth's Pills cured,
 restoring the bowels to regularity.

The secret of recruiting the vital principle is dis-
 covered in this medicine; it generates and increases
 healthy animal warmth. Provided the great organs
 are not irreparably injured, there is no disease
 Brandreth's Pills will not cure. Remember, they
 concentrate the vitality of the system to eject the
 disease wherever located in the body.

BRANDRETH'S PILLS

are sold by all dealers—25 cents a box, either sugar-
 coated or plain—and at Dr. Brandreth's

CITY AND COUNTRY PROPERTY bought, sold and exchanged. C. S. PECK, 8 West Twenty-fifth street, New York. Sept 27 17

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle \$2, \$3, or 44 as desired. Length of barrel, twenty inches. The shells used with the barrel are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 33, extra long, and No. 44, model 1873. Send for a Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,

P. O. box 1, 178.

NEW HAVEN, CONN.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 86 birds out of 100, using one barrel only.

The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 163,323. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's Works, Birmingham, England.
H. C. SQUIRES, Agent, No. 1 Cortlandt Street, New York City.

IMPORTANT TO FARMERS, COW-KEEPERS AND DAIRYMEN.

The Wonderful Self-Acting Cow-Milker,

PATENTED MAY 28, 1878.

THE MOST USEFUL INVENTION OF THE AGE.

Tested and approved by many of the leading Agriculturists, Dairymen and Farmers throughout the United States, and highly recommended by all who have used it.

WILL MILK A COW IN FROM THREE TO FOUR MINUTES and can be adjusted and used by a CHILD. Useful, simplicity, cleanliness, durability and cheapness combined. PRICE, TWO DOLLARS.

A pamphlet, with full instructions and pamphlet containing description of the milker and sectional views and treatise of the cow's teats and bag, sent prepaid to any address on receipt of price, \$2.

READ THE FOLLOWING TESTIMONIAL: 25 LEXINGTON AVENUE, N. Y., June 5, 1878. I hereby certify that, in company with the Society for the Prevention of Cruelty to Animals, and other officers of that society, I have witnessed the operation of the Self-Acting Cow-Milker, and that it fulfills all that is claimed for it.

(Signed) JOSEPH B. COLEMAN, Veterinary Surgeon. Member Royal College of Veterinary Surgeons of England and Veterinary surgeon to the American Society for the Prevention of Cruelty to Animals.

STENT & CO., Manufacturers' Agents, P. O. Box 2, 997, 132 Nassau Street, New York.

Hart's Sportsman's Favorite Metallic Shells. FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents head from driving through or springing away, thereby causing miss-fires. The Cone is made of nickel, and fast in its place. Neither rust nor corrodes fast like movable anvil made from steel. The Nickel cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These Shells are finely finished, and made any length ordered, from 2 1/2 to 3 1/2 inches. Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses throughout the country.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA. Messrs. GEORGE E. HART & Co.—Gentlemen: The fifty Shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly, A. H. BOGARDUS.

TATHAM'S IMPROVED CHILLED SHOT.

American Standard Diameters.

(RED LABEL.)

Gives greater penetration and better pattern than ordinary shot. Equally well adapted to choke-bore, modified choke, and cylinders. Our chilled shot will be found free from shrinkage, more spherical, more uniform in size, harder, heavier and of brighter and cleaner finish than any other. SEND FOR CIRCULAR.

TATHAM & BROS., 82 Beekman St., NEW YORK.

Also, manufacturers of PATENT FINISH, AMERICAN STANDARD DROP SHOT, and CGM-PRESSED BUCK SHOT, more uniform than the ordinary moulded shot.

For Sale.

FOR SALE—English breech-loaders, central fire, twist barrels, freed locks, snap action, fine finish. Price \$35. FRANK PERCEY & CO., Oskosh, Wis. jyl 11

FOR SALE CHEAP—A W. & C. Scott & Sons double B. L. shot gun, 10 bore, with case, 40 shells and implements complete. Address, with stamp, CHAS. BORNARTH, Shakopee. Scott Co., Minn. jyl 11

TROUT FISHING!

The Wisconsin Central Railroad

THROUGH TO

LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland
 and return for \$20 are sold at 63 Clark street, or the
 C. M. and St. Paul, Madison Street Depot, Chicago;
 also at low rates from Milwaukee. Dogs, guns and
 camp equipage taken free.

The points of attraction to sportsmen on this
 "Forest and Stream" route are Menasha and Green
 Bay for bass fishing; Butternut Creek and Lake for
 muscalonge; the many branches and lakes of the
 Flambeau and Chippewa which teem with bass, pike
 and pickerel, never till last season fished by sports-
 men. Between Silver Creek and Ashland all are
 trout streams, and many others can be easily reached
 along the shore from Ashland or Bayfield, while
 rock fishing for speckled trout and trolling in the
 Bay affords excellent sport.

The Chequamegon hotel at Ashland, built last
 year, has been enlarged, and is supplied with a
 steam-yacht, sail and rowboats and excellent guides.
 The atmosphere at Ashland is a sure preventive of
 hay fever.
 Steamers from Ashland to all Lake Ports.
 Send for Guide Book.

Sportsmen's Routes.

"THE FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
 of Northern Michigan,

VIA THE

Grand Rapids & Indiana RR

(Mackinac, Grand Rapids & Cincinnati Short Line.)
 Sportsmen who have cast a fly, or trolled a spoon
 in the

Grand Traverse Region

will come again without solicitation. All other lovers
 of the Red are invited to try these waters, wherein
 the fish named above, as also Muscalonge, Pike and
 Pickerel abound.

In no other streams east of the Rocky Mountains
 is the famous AMERICAN GRAYLING found in
 such numbers.

BROOK TROUT Season opens May 1.
 GRAYLING Season opens June 1.

The Sportsman can readily send trophies of his
 skill to his friends or "Club" at home, as ice for
 packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery
 of the North Woods and Lakes is very beautiful.
 The air is pure, dry and bracing. The climate is
 peculiarly beneficial to those suffering with

Hay Fever and Asthma.

The Hotel accommodations are good, far surpass-
 ing the average in countries new enough to afford
 the finest of fishing.

On and after June 1 Round Trip Excursion Tickets
 sold to Points in Grand Traverse Region, and attrac-
 tive train facilities offered to tourists and sportsmen;
 also Mackinac and Lake Superior Excursion Tickets.
 Dogs, Guns and Fishing Tackle Carried Free, at
 owner's risk.

Camp Cars for fishing parties and families at low
 rates.

It is our aim to make sportsmen feel "at home"
 on this route. For Tourist's Guide, containing full
 information as to Hotels, Boats, Guides, etc., and
 accurate maps of the fishing grounds, send to

A. HOPPE, Eastern Agent, 116 Market St., Phila., Pa.

THE SPORTSMAN'S ROUTE.

Chicago & Northwestern RR.

Embraces under one management the Great Trunk
 Railway Lines of the West and Northwest, and, with
 its numerous branches and connections, forms the
 shortest and quickest route between Chicago and all
 points in Illinois, Wisconsin, Northern Michigan,
 Minnesota, Iowa, Nebraska, California, and the
 Western Territories.

OMAHA AND CALIFORNIA LINE
 Is the shortest and best route for all points in Nor-
 thern Illinois, Iowa, Dakota, Nebraska, Wyoming,
 Colorado, Utah, Nevada, California, Oregon, China,
 Japan and Australia.

CHICAGO, ST. PAUL AND MINNEAPOLIS LINE
 Is the shortest line for Northern Wisconsin and Minne-
 sota, and for Madison, St. Paul, Minneapolis, Duluth
 and all points in the Great Northwest.

WINONA AND ST. CETER LINE
 Is the only route for Winona, Rochester, Owatonna,
 Mackato, St. Peter, New Ulm and all points in
 Southern and Central Minnesota.

GREEN BAY AND MADISON LINE
 Is the only line for Janesville, Watertown, Fond du
 Lac, Oshkosh, Appleton, Green Bay, Escanaba,
 Negaunee, Marquette, Houghton, Hancock and the
 Lake Superior country.

FREEMONT AND DUBUQUE LINE
 Is the only route for Elgin, Rockford, Freeport and
 all points via Freeport.

CHICAGO AND MILWAUKEE LINE
 Is the old Lake Shore route, and is the only one pass-
 ing through Evanston, Lake Forest, Highland Park,
 Waukegan, Racine, Kenosha to Milwaukee.

PULLMAN HOTEL CARS
 are now running regularly between Chicago and
 Council Bluffs, on the California Express
 Train of the

CHICAGO & NORTHWESTERN RAILWAY.
 West-bound, they leave Chicago daily, except Sun-
 day (and on every third Sunday), from the Wells
 Street Depot, at 10:30 A. M., and arrive at Council
 Bluffs next morning.

East-bound they leave Council Bluffs at 5:30 P. M.,
 daily, except Saturday (and on every third Saturday),
 and reach Chicago next afternoon.

No other roads west of Chicago runs Pullman
 or any other form of Hotel cars.

TO SPORTSMEN.

This line presents peculiar advantages. For
 Prairie Chickens, Ducks, Geese and Brant shooting,
 our Iowa line to-day offers more favorable points
 than any other road in the country, while for Deer
 and Bear hunting, and for Brook Trout, Lake
 Salmon, Pike, Pickerel and Bass fishing, a hundred
 points on the Northern and Northwestern lines of
 this company will be found unsurpassed by anything
 in the West.

Bogardus' Patent Rough Glass Balls and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit. CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade.

MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the shooter, is now ready for the market. Price \$8. Old style, \$6. Parties buying glass balls will receive, in each barrel containing 300 balls, score book and rules for glass ball shooting, containing 40 pages.

HEADQUARTERS FOR BALLS, HAGGERTY BROS. & CO., 10 Platt Street, N. Y. City.
FOR TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," by A. H. BOGARDUS, containing instructions for Glass Ball Shooting, chapter on breeding and breaking of dogs by Miles Johnson. Price \$2, by mail, postage paid. Address, Capt. A. H. BOGARDUS, Elkhart, Lagan Co., Ill. Dec 6 '87

IRA A. PAINE'S FEATHER FILLED GLASS BALL. PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.

Send for price list. Special inducements to the trade.

THE STRONG BLACK BASS ROD-IN TWO PIECES.

The undersigned is making a rod for Black Bass fishing, to which the attention of anglers is called. It is made from drawings and suggestions furnished by the well-known expert, Dr. J. A. Henshall, of Ky., who says of it: "It is the finest rod made, and just 'the thing' for the best black bass anglers." The two-joint principle, applied to rods of this style and class, Dr. Henshall considers by far the best. The butt of the STRONG ROD is of the choicest second-growth ash, and the top-joint of Cuba selected lancewood. The rod is finished with solid German silver mountings; reel bands above the hand, and standing guides throughout. Length, 8 ft., to 8 ft. 6 in.; weight, 3 ozs. to 3 ozs. The finish of the STRONG ROD is equal to any rod made. It is warranted in every respect. Price complete, as above, \$10; price with extra top joint, \$13. Address F. A. STRONG, Honesdale, Pa.

Rods of all kinds made to order. Send for price list. je27 1fr

Fish & Simpson's

NEW

Pocket Scale for Sportsmen.

A very handsome article, entirely rust proof, being made of the best hard brass, heavily nickel-plated, only measures 8 in. in length by 3/16 in. in diameter, and of which the annexed cut is a true illustration. This outland scale has been designed especially as a useful and convenient pocket companion for sportsmen, for the purpose of weighing fish and game. Registers as high as 16 pounds, and graduated to 2 ounces by standard weights. Sent by mail, postpaid, on receipt of 75 cents.

TRADE SUPPLIED.

On receipt of two three-cent stamps we will send our new sixty-four-page catalogue, the most complete list ever published on Fishing Tackle, Camping Goods, Guns, Pistols, Base Ball, and everything in the line of Sportsmen's Goods.

FOREST AND STREAM & ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

Terms, Four Dollars a Year.
Ten Cents a Copy.

NEW YORK, THURSDAY, JULY 18, 1878.

Volume 10.—No. 24.
(No. 111 Fulton St., N. Y.)

For Forest and Stream and Rod and Gun. Aragon Wolf Dogs

ABOUT forty miles west of San Luis Potosi the road to the Pacific coast crosses a double mountain-range, whose central valley, the *tierra templada* of Zacatecas, is studded with stock farms and sheep ranches, while the upper ridges are still as wild and woody as the summit regions of the Californian Sierras.

In the summer of 1874 I crossed these highlands with a mounted guide and an old Mexican farmer who had joined us at Potosi with two of his *Peons* or Indian muleteers. Rains are rare in Central Mexico between June and October, and on the afternoon of the second day we had to pass a long series of rocky hills and dry, hramblebushy ravines, before a sudden turn of the bridle path brought us to a main valley, whose grassy slopes and sedge bottom announced a creek or a still more welcome spring. Our guide dismounted and managed to pull his pony through a hedge of alce-shrubs into the bed of the supposed creek, where, to our dismay, we found only streaks of moist sand and a slimy puddle here and there, but not a drop of drinkable water.

"Never mind," said the guide, "three miles up on this same creek there is a spring that has never disappointed me yet. Better dismount again; we have to get back through that confounded hedge somehow."

"Can't we keep up this creek?" I asked, "it looks dry enough, more level than our old road, and less dusty." The guide grinned. "Up this road? I'll risk it if the caballeros agree to do all the fighting. I suppose you heard that tinkling and bleating in the bottom up there? That's old Carillo's sheepwalk; he keeps a wicked set, six full grown hounds; a full pack I should call them, if it wasn't for their empty bellies. But starving doesn't make them more amiable, you know. You may try it, though."

"Let's risk them, Don Pancho; what do you say?"

"With my gouty old mare? No, thank you," laughed the rancheiro, "she isn't saddled for a steepchase."

"How do you mean? the dogs would not stampede her, would they?"

"Stampede her? God bless you, they would unhorse me in five seconds! If you had as much experience in sheep stealing as old Gruyo, here" (one of his *peons*, who was indulging in a sly chuckle), "you would not ask such questions. Ride straight into a pack of Aragon hounds in broad daylight! The idea!"

We regained our bridle-path and kept along the brink of a cliff that became higher and steeper, and overhung, or at least overshadowed, the valley where we passed Mr. Carillo's well guarded sheep. Out of this shade at the foot of the cliff emerged the dogs, if that name could be applied to such uncanny brutes, one of them so exactly like a gaunt black wolf that his red collar seemed an indispensable distinction, the rest taller and less shaggy, but too wolf-headed and a great deal too big to be mistaken for greyhounds. They walked silently along the foot of the precipice, but eyed us in a way that reminded me of the upward leers of a shoal of hammer-headed sharks that accompanied our boat along the Yucatan coast.

"Don't you think we are on the right side of this cliff?" asked the rancheiro.

"Well, to say the truth, if they are as bad as they look, I should think that Mr. Gruyo's game must be a dangerous pastime in these parts. Are they quite alone? Where is the shepherd?"

"Cooking his dinner in that willow grove, I suppose; I saw a smoke going up there a while ago. He has to give his friends a wide berth while he has any meat in the pot; they come in for the bones and a little milk in the evening. Wouldn't do to make them too carnivorous, you know."

"Are they really dangerous, then? Do you suppose they would tear a stranger?"

"Do I suppose it! Hold my mare a moment." Then to his *Peon*: "Say, Coco, I am going to have some fun out of that valuable pet of yours, if you have no serious objections." Without waiting for a reply he dismounted and approached a mangy young mastiff that had followed us from our last camp, where Coco had treated him to a chunk of sour cornbread. It was a *perro chinaco*—a tramp dog—one of those masterless curs that infest the villages and prairies of Western Mexico. Coco's friend snarled, but also wagged his stump to obviate a possible misunderstanding, till Don Pancho confirmed his gloomier presentiments by grabbing his neck and tail at the same time. Coco, with the ultra-canine subservience of his tribe, volunteered his assistance, and between them they shing the pet over the precipice.

When Daniel interviewed the lions in that provoking fashion, the well-bred forbearance of the noble quadrupeds could not have excelled the behavior of the Aragon pack during the first ten seconds after the arrival of their visitor. He had tumbled into a cactus-copie, and before he could disentangle himself they had managed to surround him, but not a growl was heard nor a funeral note. They had slowly advanced within leaping distance and now stood still, restraining

even the vibratory motion of their exalted tails. One lank, panther-like bitch, standing a little to the rear and rather too low to be visible from the centre of the ring, stepped back, walked to the very foot of the cliff, and tried to squeeze herself, unobserved, through a withered bramblebush at the edge of the cactus copie. She got through, but not quite inaudibly, for the mastiff started and half turned his head in the direction of the cliff.

"*Es el senyal de matanza*—that's the kill signal," said my guide, who had served an enlistment in a frontier regiment. (If the Mexicans shoot a deserter they handage his eyes, and the provost-marshal gives the *senyal* by waving a handkerchief.)

He was right. Six bullets fired from ponderous old Spanish musketoes could hardly have done the work swifter, and certainly not more effectually. In the moment when the mastiff gave that start, the pack leaped upon him with a coughing roar, and though a maze of porcupine-cactus with rigid, lancet-like prickles was in their way, and though the mastiff rolled himself into the very centre of that maze, I am sure that, with the exception of his skull and his upper ribs, every bone in his body was crushed within twelve seconds. The shepherd issued from his willow grove and whistled with might and main, so perplexed at the sudden uproar, and for a moment the hounds lifted their gory snouts to listen to what might be a dinner-call, for all they knew; but a slight movement in the hush, caused probably by a recoil of the down-trodden branches, rekindled their fury; they flew at the mangled *chinaco* and lessened the possibility of a revival by dismembering and disemboweling the carcass.

"Let's go," said the rancheiro, who had eyed me askant under his broad hat, and seemed aware that I could not face the scene much longer without commenting upon his brutal experiment. "Would you like to have a pup of that breed?" he asked, as if to intercept my remarks, "we can reach Don Negrete's place before night; his bitch littered last week, I think, and he has a splendid old dog that he would sell you very cheap. He used to keep them for cow-dogs, but he isn't in the butcher business this year."

"Nor am I; so I don't think I shall invest in butcher dogs. What else are the brutes good for?"

"Oh, they make first rate watch dogs, and nothing can beat them in a fair fight. I have often advised Negrete to take his big one to the Rio Grande, where they brag about their bloodhounds and American mastiffs. And splendid deerhounds they make, especially in a wild country where there is no danger of their getting into serapes. It isn't quite safe to trust them near the settlements."

Mr. Negrete was out when we reached his farm, but his hospitable reputation was justified by his son, a cadet of the Zacatecas Military School, who was spending his summer vacation on the paternal estate. We made ourselves at home, and after supper Mr. Negrete, Jr., invited us to inspect the pups and their awful dad, the deer- and blood hound Sentinel, who was kept in the back room of a log-built granary. "My father sold him last week," he said, "but we have to board him till his new boss comes back from Potosi. We sold him to an American stock farmer who bought horses and jennies here and wants to take them and the dog to California next month."

He stopped us when we were about to enter the granary. "Let me go ahead," he said; "I've got to tie him up, I guess, if he's as mean as he used to be."

Twilight had far advanced, but we saw enough to convince us that the young man's precaution had not been quite superfluous. A head that would have done credit to a werewolf glared upon us from behind a pile of old gunny-bags; a chain rattled, the dog rose to his feet, retreated a step or two, and then leaped forward with a violence that jerked him off his fore feet and made the timbers of the building creak. Hanging by the chain in a semi-erect posture and swaying from side to side, he uttered sounds which I might describe as abrupt howls or hoarse yells, but which differed from the bark of a common watch dog as the bellowing of a sea lion differs from the yelp of a seal. He was certainly a representative dog of a breed that "could not quite be trusted in the neighborhood of human settlements," and when Mr. Negrete informed us that the brute had once succeeded in breaking the collar which now prevented him to collar its visitors, we became anxious to see the pups before night.

"How did she get rid of her collar?" I asked at the threshold of a little tool-house that had been allotted to the nursing bitch.

"Oh, she is all right; wouldn't hurt old friends or introduced strangers if she can help it. We raised her from a pup and tamed her before she left this yard, and that makes a wonderful difference. If a young Aragon hound has been in the bush for a year or two, it's no use trying to break him afterward. That's what spoiled Sentinel. He is a splendid hunter, but—"

"Too fond of two-legged game?"

"That's it. Since we sold him—I might as well say the truth—the old man is afraid of him, the brute tamed him once."

"Tread his own master?"

"Yes; my father caught him taking a square meal out of a young buck that he had crippled that morning, and all whistling was of no use; so he picked up a stone—hit him in the jaw, I believe, and the brute flew at him like a panther. Father made for a tree, but came near being too late, for the dog jumped and got at his foot. Nabbed him in the heel and tore one of his moccasins off."

"I should have been tempted to make his hide into moccasins!"

"No, no; he has his good points, too. He would starve to death rather than kill sheep, and we saw him overtake a *cimaron* (*Ovis montana*) on its own ground, up in the rocks of the Sierra Toluca. My father could not find it in his heart to shoot him."

The Aragon wolf-dog is the tallest and strongest, and, next to the Siberian mastiff, the heaviest variety of the genus *canis*. A full grown *galgo de Aragon* stands forty-six inches, measures five feet from nose to stern, and about thirty-four inches around the body back of the shoulders; length of head, sixteen to twenty-five inches (the latter measure attained by old—especially old male dogs), and weighs 220 to 235 pounds. He has a deep-mouthed wolfish head, short, semi-pendent ears, remarkably muscular neck, stout legs, open claws, a strong but not very bushy tail, and in the upper Sierra acquires a heavy coat of hair, varying in color from a glossy black (often with white breast and feet) to that peculiar dark brindled color called *color de lobo*—"wolf color"—by the Spaniards. He is a native of the Sierra Morena and its foothills in the Spanish province of Aragon, and, as some intelligent Creoles assured me, a cross between the *galgo*, or Spanish greyhound, and the large black wolf of the Southern Pyrenees, or more probably between the *galgo* and those monstrous bloodhounds that helped the Spaniards to drive the Moors from Andalusia and the helpless aborigines from the West Indian Islands. In his native country he is known as the *perro pastor*, or wolf-dog *par excellence*; in Spanish America as the *galgo de Aragon*, the word *galgo*, which the Spaniards apply only to the genuine greyhound, being here used for hounds in general, and even for many long-legged animals, since I heard a Mexican farmer describe a coyote as a *lobito galgo*, "a lank little wolf."

Of all wild or domestic quadrupeds, the Aragon wolf-dog is the most aggressive; of all animals I should say, if the gad-fly did not distance all vertebrate competitors. The English bulldog is his superior in tenacity and perhaps in cruel vindictiveness, but in reckless disregard of danger and in irascibility, the *galgo* surpasses all known species of carnivora, and even the *Pavo cynocephalus*, the choleric dog baboon of the Abyssinian Mountains. His fits of rage are wholly incalculable; an animated gesture, the accidental dropping of a stick or of a handkerchief, may constitute a *casus belli* and provoke him to a murderous attack. In out-of-the-way corners of the farmstead he lies in wait—not like a guardian of his master's property, but rather like a wild beast with private interests at stake; and burglars must come prepared for desperate possibilities, for the *galgo* is a silent watchdog that never betrays his presence till his foe is within leap. He does not bark, for he means to bite.

General Louis Artega, the Mexican patriot, who was shot by order of Marshal Bazaine in 1865, would have escaped on the eve of his execution if it had not been for one of those Aragon sentries. Artega's friends had ascertained that the French commander of Fort Perote was so short of men that he could keep but one post at night, the one in front of the guard-house prison. This post was manned by three soldiers, who relieved each other at regular intervals. The 12 p. m. to 2 a. m. man had been bribed, and after walking his beat till his comrades were fast asleep, he entered the guard-house, blew out the light and unlocked the door of the prison cell. They had a short ladder, but the night was so moonlight and calm that the soldier thought it safer to slip through the sallyport, if they could unfasten the gate.

At about 1 a. m. the sergeant of the French guard was roused from his illicit slumbers by a booming sound that rolled through the fort like the echo of a musket shot.

"Get up!" he cried, punching his men right and left; "did you hear that? That wasn't our sentry, was it? Listen!" Loud screams, mixed with the battle-voice of a furious dog, sounded through the night air. "That's the old colonel's (the commander's) *galgo* bitch; he posted her at the main gate last evening! Let me see. Oh! the cell door open and—I thought so—the sentry gone! Never mind the lamp—get your muskets! To the sallyport, double quick!" On the parade-ground they were joined by the commander, who came running from his quarters in his stocking feet; but before they reached the gate they met a tall man in a Spanish mantle walking quietly toward the guard-house. He stopped and doffed his hat when he recognized the commander. "Sorry to have troubled you at this untimely hour, caballero," said he, with arch nonchalance, "but the nights are so short, you know, and I had promised to be in Puebla before sunrise."

"You were chained like a dog when they brought you here, Mr. Artega," said the incensed officer, "and I took your irons off, because I mistook you for a gentleman. This is my reward, it seems."

"Very sorry indeed to have disturbed the peaceful slumber of my keepers. Well, messieurs, let the result of my experiment compensate you for your trouble. In the first place, I have found out that a musket isn't as handy as a knife in a dog fight; and secondly, you see that a Mexican dog is more reliable than a French soldier."

They locked him up, and the sergeant sent two men to the sallyport; but when they attempted to remove the corpse of their comrade an ominous growl in the dark gateway warned them to desist. They returned with lanterns and reinforce-

ment, but had finally to send for the owner of the dog. The faithless sentry was found "torn into shreds," as the commander's report expressed it, and stretched across his body lay the bitch, badly wounded, but undaunted, and resolved, as it seemed, to hold the fort against all comers till relieved by proper authority.

The Aragon wolf-dog exceeds the mastiff in strength and the greyhound in swiftness and intelligence, and faces the thorniest brake with the resolution of a Russian boar; but all his promising points as a hunting dog are outweighed by one fatal disqualification—he cannot hunt by scent.

Apocryphal of the like deficiency in greyhounds, collies and poodle dogs, Dr. J. E. Van Ende, formerly Superintendent of the Munich Zoological Garden, gave me the following ingenious explanation, based on his experience with different "menagerie" dogs, representative canines of sundry species, that lost their olfactory acuteness in the atmosphere of the Zoo: "According to a hy-law of merciful nature, everything that affects our senses with painful violence tends to blunt their sensibility. The sufferings of a canal mule are mitigated by the increasing callosity of its hide; a two years' residence in Spain will enable a foreigner to chew red pepper with impunity; millers and gunners become dauntless, and the eye-aches of arctic travelers are palliated by snow blindness. Now, the effluvia of a menagerie or sheepfold, which offends even our blunted organs, must be downright torture to those of a sharp-scented animal. The sensitive nose of a dog must be affected by such odors as the human ear is by a cannonade, or the human palate by a dose of asafoetida; he suffers more than the misery of a tanner's apprentice, till nature comes to his relief by blunting the sense of smell. A young pointer bitch that had been confined for a year and a half with a hyena, a jackall and two foxes, as a member of a so-called happy family, was afterward unable to scent a cat across a corridor, and the "lion's favorite," a poor spaniel that had served a three years' term in a carnivora cage, would have failed to distinguish a hasswood ham from the orthodox article. In breeds that have been employed as shepherd's dogs for many generations this deficiency becomes hereditary, and cannot be cured by a change of occupation, and there is no doubt that the greyhound and the poodle, as well as the Spanish wolf-dog, acquired their characteristics on the mountain pastures of the Mediterranean peninsula."

But on the open prairies of Texas and California, where large game can be hunted by sight, the swift greyhound has become very popular, and the only obstacle to the introduction of the swifter *galgo* is his preposterous, but by no means incurable, ferocity. Early and judicious training would, no doubt, improve his temper, though I must admit that experiments with imported specimens are a little discouraging. Mr. Negrete's black champion has become the *bete noir* of San Bernardino County, Cal., and his purchaser, Captain St., who used to congratulate himself upon his bargain, has found out that a weekly suit for damages can make a wolf-dog a rather expensive pet. Last fall the captain heard that one of the northern tributaries of the Mohave River was swarming with mallards and moorhens, and engaged an experienced sculler and his duck-boat for a trip to Canyon Lake, at the head of that tributary. The oarsman, a poor "greaser" with a large family, seemed very anxious to earn a couple of dollars, but when he ascertained that Cerberus was on his passenger list, he "backed out," and offered to loan his boat *gratis*, or even to part with it altogether, rather than convey the *galgo* for all the wealth of Upper and Lower California. The captain then relinquished his purpose, but complained to a neighboring clergyman about the perfidy of the Catholic Mexicans. "You ought to make allowance for the circumstance that the man is a 'Mission Indian,'" said the deacon. "He has been taught to believe in the efficacy of the extreme unction, and therefore prefers to die on terra firma."

F. L. OSWALD.

Fish Culture.

MORE ABOUT THE MOVEMENT OF EELS.

TROUTBROOK, June, 1878.

EDITOR FOREST AND STREAM:

I have just read in a late number a very interesting communication on the migration of eels, and notice that the writer claims it as a settled fact that very young eels always descend to the salt water.

Now, while entirely crediting the gentleman's statement that his little eels go down stream, I would like to tell him, and all interested in these things, what the wee wrigglers do in my pond and brook. My trout pond, of cold spring water, also contains eels. It is connected with Roslyn Harbor by a rapid brook some three hundred feet in length.

Last spring I had occasion to repair the tumbling dam over which the water flows from the pond, and noticed that the pool just below this dam was literally dense with eels about three inches in length.

I watched them closely day after day, and found they were making great effort to get up that dam. The current was too swift and heavy for them, so they were actually climbing by thousands over the wet stones and logs. To settle the matter conclusively, I lowered the pond until there was only sufficient water flowing over the tumbling dam to keep the stones wet. Then the eels began to remind me of the youth who "bore the banner," for their motto was unmistakably "Excelsior," many of them actually wriggling up the perpendicular face of an eight inch flush-board, and thus getting into the pond.

May it not be that young eels desire water of a certain temperature, and will proceed either up or down stream to find it? I think that in summer they seek the cooler water, whether it be salt or fresh. Yours truly,

THOMAS CLAPHAM.

Having submitted Mr. Clapham's letter to the State Commissioner of Fishery, Mr. Roosevelt sends us the following:

Your correspondent's mistake in the above letter is that he does not know how the eels got into the pool below his dam, whether they came from below or above. He saw some—possibly a considerable number—climbing up over the wet stones, and concluded they were all doing so. Here is where he was deceived. All fish when pursuing a certain course in schools return upon themselves in numerous individual cases. When salmon enter a salmon river they do not ascend at once, but remain at its mouth and run forward and back, and play about for days and sometimes weeks before they make their final movement. So the eels go down and come back, and stop, and advance, and recede a little until they are ready to

migrate. I mentioned in my previous letter that some of the eels in my preserves, after having wormed or squirmed their way down stream through two screens with meshes so small as to endanger their lives, climbed laboriously back into the trough, and would have gone through the screens up again if they could. Very possibly they have to attain a certain age, size, or development, as with salmon smolts, before they can venture into the salt water. Let your correspondent ascertain whether his eel fry do not come from his pond in vastly greater numbers than they go back into it before he makes up his mind as to their mode of life.

ROBERT B. ROOSEVELT.

Our correspondent of Pittsfield, Mass., Mr. Thomas Chalmers, writes:

"Mr. Roosevelt asks your correspondent, B. T. B., 'How did he know whether the eels he saw in the Susquehanna were going up or down the river?' It is true, fish, when traveling, do not always follow the direction their heads are pointing. If B. T. B.'s eels were going up the Susquehanna, they were in their natural course. Mr. Roosevelt's eels had undoubtedly got lost. In the rivers of Great Britain with which I was familiar (and they were many), the young eels went up stream in the spring. In the rivers of this continent (and I know a great many of them), the young eels go up stream in the spring. How do I know they were going up? Well, as the Irishman said, 'To see was to believe, but feeling was the naked truth.' I have seen eels go over dams and other obstructions by climbing them; I have taken eels off the face of a dam (stone masonry) half-way up; I have seen them when a strong frochet was in the river leave the water, flank the dam, and take the water above the dam. I have caught and used eels many years for bait, for there is nothing better for any of the bass family, black or striped."

HERRING, SHAD AND EELS IN THE POTOMAC.—The Virginia Fish and Game Protective Association furnishes to the Richmond Dispatch a statement showing the decrease in the food fishes of the Potomac. In the spring of 1840 the total catch of herring in that river may be estimated at \$6,000,000. The catch last spring was less than 5,000,000, a difference in thirty-eight years of \$1,000,000, between the highest and lowest catches ever recorded, except those during the war when the industry was impeded by military restrictions. In the spring of 1840 the shad catch was estimated at 4,700,000 in round numbers. During the last season there were taken only 210,000, a number 20,000 less than the single White House Landing on the Potomac, a short distance below Mount Vernon, has been known to catch season after season for years in succession.

The investigations of the association have induced the belief that the eel is responsible for this enormous decrease in the edible fish of the river. The eels have been almost undisturbed and have been allowed to increase and multiply until now they are so formidable in numbers and voracity as to devour all deposits of spawn and so destroy all natural and artificial propagation. In this opinion, which is also entertained by experienced fishermen, we think the association are correct. The eel is a recognized destroyer of these fish. The United States Fish Commissioners, in their work on the Chesapeake, find it exceedingly difficult to secure spawning fish which have not been attacked by the eel. When caught in the net the spawning fish is found with the eel attached devouring the spawn. A crusade against these reptiles in the Potomac must be attended with excellent results. The Virginia Commissioners cannot expect to have their once rich river restocked so long as all their efforts result only in fostering the destructive agent.

UNITED STATES FISH COMMISSION.—Professor Spencer F. Baird has gone to his summer headquarters at Gloucester, Mass., where he will make a specialty of hatching young cod fish for the New England coast. We may yet see the fishing banks restocked and the fishermen of the United States devoting all their time profitably to the domestic industry. Prof. Baird also proposes to experiment with the Norwegian gill net for deep sea fishing, and thinks that he can demonstrate that with its use much larger catches of cod can be made near the bottom than are now taken with hook and line fishing.

ORIGIN OF SALMON IN THE DELAWARE.—Editor Forest and Stream: As I have obtained all the data as to the introduction of salmon in the Delaware, I trust you will deem it worthy of being noted in your paper. One of the gentlemen who took a deep interest and a very active part in the efforts has passed away, and whatever credit is due ought certainly to be recognized. The first plant of Atlantic salmon was made on the 30th of May, 1871, in a stream emptying into the Delaware River, called Bushkill, not far from Easton, and consisted of about 2,000 young fish having been hatched out by Messrs. Christie, of Dutchess County, N. Y. In the spring of 1872 Mr. Wilmot, of Newcastle, Ontario, Canada, sent to the late Mr. Thaddeus Norris, of Philadelphia, and Mr. Geo. W. Stout, of Easton, 12,000 eggs of the Atlantic salmon, which were hatched in a spring near the Bushkill. About 10,000 fish were secured and placed in the stream on the 6th of April, 1872. On the 23d of March, 1873, 40,000 eggs were obtained from Mr. G. O. Atkins, Bucksport, Me., and placed in hatching boxes in a large spring near the Delaware River, about two miles above Easton on the New Jersey side. Of these about 20,000 hatched, and the fish placed in a stream called Spring Run in May, 1873. The foregoing was entirely a private enterprise, and was first proposed by J. Dickinson Sergeant, of Philadelphia, at the house of the late Thaddeus Norris, Esq., he heading the subscription list to defray expenses with a subscription of twenty dollars. After the spring of 1873 the Fish Commissioners of Pennsylvania and New Jersey directed their attention to the matter, and these gentlemen discontinued their efforts. The first salmon caught in the Delaware River was taken at Riverton, N. J., about the 1st of May, 1877, and weighed about ten pounds. Shortly after that another was taken there, but it escaped, and was supposed to weigh twenty pounds. On the 16th of November, 1877, one was shot in the Bushkill, a female, lank and

lean, thirty-two inches in length and weighing nine pounds. In connection with the foregoing permit me to add that the first plant of black bass in the Delaware was made at Easton, October 26, 1870. Yours truly,

Philadelphia, June 18.

BENJ. W. RICHARDS.

SALMON IN THE CONNECTICUT RIVER.—James A. Bill, Esq., State Commissioner of Fisheries, writes us as follows from Lynn, Conn., under date of July 13:

There are no salmon being taken in the Connecticut at this time. The Commissioners are going to take steps to find out the catch of salmon on the river in seines and gill-nets, and in the pounds outside in the Sound. James Selden's fishery, two bauling seines, at Brockway's Island, has taken fifteen salmon. This is the greatest number taken at any one fish place.

FISH CULTURE IN FRANCE.—La Nature informs us that M. Dabry has succeeded in introducing into France one of the cyprinoides, the *Hippodamichthys Dabryi* or *H. Molitrix*. The fish comes from China, and is called the Kia-yu. It is easily fed on aquatic plants and grows to weigh forty pounds. The fish introduced into Paris four years ago have already acquired a good size. The French *Societe d'acclimatation* propose importing more of these fish, so that they can be propagated. The flavor of the *Kia-yu* is said to be excellent, resembling turbot, and to be without bones.

Natural History.

THE WHITE-HEADED EAGLE IN THE HUDSON HIGHLANDS.

BY EDGAR A. MEARNS.

(Read before the Linnean Society of New York, April 6, 1878.)

(Concluded from Page 421.)

WE have reached the lower brook. How splendid the falls to-day! What a vast volume of water is pouring down. This is the effect of the recent heavy rains. But how are we to cross the swollen stream, do you say? Oh! this is easy. I have often crossed before on this old birch-trunk. How strange that it should have grown horizontally out over the stream, and then shot up to such a height as if for no other purpose than to furnish you and me, reader, with a bridge on which to cross the brook on this particular morning. We now press up the steep bank to the top, and then follow a beautiful path that winds about through an oak forest, giving one occasional pretty glimpses of the river and opposite shore. And now, by an unexpected turn of the path, we find ourselves standing upon a rocky point above the jagged cliff, with the whole scene before us, and nothing to obstruct the view. On the opposite shore is West Point, the site of the United States Military Academy, with some of its elegant buildings fronting on the cliff. That large building with the arched roof is the Riding Academy. Farther to the north is Battery Knox, bristling with its grim array of heavy cannon, mounted on splendid iron carriages; still farther northward are seen the frowning walls of Fort Clinton, while on the extreme point is Gee's Point, with its lighthouse. Winding along the river's bank among the cedars is "Flirtation Walk." There is the long, crooked line of officers' quarters and the barracks, with their background of dark cedars, and in front the broad, snow-covered plain. On the height behind are seen the massive walls of old Fort Putnam, built during revolutionary times. This eminence commands the finest view in the Highlands, and one of the finest in the world. Looking to the north, the bold outlines of Cro' Nest and Storm King are presented to our view, with their sun-lighted cliffs and perpendicular ledges, descending hundreds of feet to the river.

We now follow the path, which winds obliquely down to the edge of the cove through a thick grove of hemlocks. See! the eagles have seen us, and both of them leave their perches as we approach with a leap and a powerful wing-stroke, that shakes the whole tree-top. They are a pair, male and female, each with suowy white head and tail and a handsome yellow bill. They are coming directly toward us. But do not shoot; they are farther off than they seem. Being so large they look near, when seen against a background of clear sky. It would spoil all to frighten them by a miss. How splendid their flight! See them wheel and turn, ascend against the wind, and float with wings motionless! Sorry you had not fired? No need for that. They will return to these same trees before long. This is my plan: We will build here, midway between the two hemlocks at the side of this rock, a bower of hemlock boughs, and lie concealed within until the birds return to their perches. We will break off some of these dead maple saplings for the framework of our arbor. The hemlock boughs are soon collected by the aid of our strong knives. And now we are quietly ensconced within our pretty little shelter, each seated on the soft evergreen boughs anxiously watching through loopholes, at opposite corners of our domicile, the movements of the many eagles that are in sight.

Some are sitting upon the edge of the ice, watching, ready to seize the first unfortunate carp that approaches in the grasp of their strong talons. This manner of fishing is shared in common with the crows and several species of owls. But this easy means of procuring a livelihood can only be indulged in at this particular season. At other times they plunge from on high, often entirely disappearing beneath the water, and seldom rising without bearing the fish in their claws. Some of them are soaring in wide circles in the higher regions of air; no doubt for exercise, or to aid their digestion. Still others are frolicking together overhead, chasing each other with laughing, cackling and screaming cries as they pursue each other; sometimes throwing themselves backward in air, striking heretofore with their talons when the pursuers come too close; arching their necks, erecting their crests, and uttering loud, cackling screams and hisses. They are constantly passing over our verdant screen, unconscious of the danger that lurks beneath, making a great din with their cries. But see! One of them comes flying toward us, bearing a great carp, struggling in its talons. He comes straight toward us; but now he veers a little to the north, and now stretching upward, and then closing those great wings, he fairly alights on a side limb of a large pine tree, just out of gunshot, giving an exultant scream of triumph, or else a call to his mate; for soon

the female, which singularly enough is the larger and stronger of the two, comes and alights upon a higher branch of the same tree. They are so near as that we can easily distinguish every movement. The male bird, holding the fish within the grasp of his powerful claws, strikes it a blow with his strong hooked bill that severs the head from the vertebrae, and then begins to feast on its quivering flesh; beginning by tearing out the entrails and swallowing them, smearing the beautiful white feathers of his head with blood and filth; he then tears into shreds and swallows the remainder, till all is disposed of; the female all the while leaning low down on her perch toward her lord, and uttering that loud, laughing cry.

See in the far distance, a pair of eagles soaring and wheeling high over the Hudson. Have they just descended from their night's resting-place in that deep, heavily-wooded ravine under the summit of Cro' Nest? No. They are the same that we scared from their perches on these trees. See their graceful aerial evolutions as they rise against the wind and soar in wide circles, their snowy heads and tails alternately glistening in the sunlight with dazzling brilliancy. Now they are flying toward the cove with powerful wing-strokes. See the female poises in the air, then, closing her wings, she plunges headlong with fearful velocity toward the river, where a crow is struggling with a fish that it has succeeded in capturing through a fissure in the ice. She will be dashed in pieces upon the ice—but not! spreading her broad wings just as she nears the ice, she protrudes her robust feet, and, grasping her prey, bears it upward, rising as light as a balloon. It was all done so suddenly that we could scarcely realize the splendid spectacle we have witnessed. We did not see the fish struggling in the cruel talons of the bird. Now she bears her booty straight toward our ambush. A moment more and she settles upon the top of the highest hemlock. A moment elapses. Then the loud, ringing report of the heavily-loaded shot-gun awakens the echoes. It is followed by the crashing of branches and the sound of a heavy body striking the ground on the hillside below us. A minute after a shrill scream announces the presence of the other bird; and, looking upward, he is seen suspended in air with tail depressed and vibrating, neck arched and looking down, trembling all over with fierce rage. Another loud report—a shriek—a crash—and we attempt to rush out from our cover, but find ourselves so benumbed by the cold wind that we can scarcely stir; for, indeed, it was only with the greatest difficulty that our numb fingers could press the triggers of our pieces. Stumbling and rolling down the frozen banks, we reach the path, where a good run again sets the blood into circulation. We return, warm, to the scene of our triumph, and find one of the birds quite lifeless, but the other one is only winged. What shall we do with it? We have decided not to kill it, but keep it alive—a glorious trophy. How can we capture the fierce creature without doing ourselves injury? Leave this matter with me, if you please. I have cut a long stick with a fork at the end of it; have taken the strap from my basket, and, holding it with my teeth, take off my pea-jacket and spread it open on the ground. As we approach the fierce bird it comes jumping toward us, making great leaps. When I oppose its progress with the crooked stick it throws itself upon its back with its white tail beneath it, arches its neck, with the feathers of its head alternately erected and depressed, as if with the breathing of intense rage. Drawing up its powerful claws, it prepares to defend itself to the end. And when shall I ever forget the sinister expression of those eyes, rendered stern even when in repose by the overarching brows. I now hold its head securely with the forked stick, then, seizing both of its enormously developed, muscular legs simultaneously, I strap them securely together and then place it on the coat, buttoning it tight across its broad, heaving chest, thus effectually preventing the possibility of being struck by its wings. Being thus securely lettered, we can carry our living prize quite nicely in our arms, excepting an occasional nip, when we carelessly allow the hand to come too near the creature's bill, when grasping a sapling to aid in climbing the steep bank.

During all this time many eagles are seen flying overhead, screaming, but we heed them not, for we are already quite satisfied with the result of our expedition. Besides, it has not been without some feelings of regret that we viewed the destruction of those two splendid birds. Then came the reflection that, perhaps, for scores of years this pair has made this locality a stopping-place on their migratory journeys from the bulky South to the bleak and desolate region of the far North; that for many years, perhaps a long life-time, they have annually reared their young in their bulky nests on some giant cypress tree in the Southern States—perhaps in Texas or Florida—where they deposit their eggs as early as the second week in January, so that they have already discharged their parental duties, and reached us by the early part of March.

That the eagles are migratory is shown by the fact that they are comparatively rare during the winter, but suddenly appear in large numbers during the latter part of February or early in March—generally at the time the river opens, affording to them the means of subsistence—at the season when those of the species that breed in this latitude would be occupied by the duties of incubation, or rearing their young, hence it is inferable that the eagles that are with us at this season have reared their young earlier in the season in the far South.

The white-headed, or "American eagles," called by various names (frequently "bald eagles"), inhabit the whole length and breadth of North America, and are sometimes taken in Greenland, while stragglers are said to have been captured in Europe. They breed nearly throughout their whole range.

Let us now examine our prizes more closely. The head, neck, upper and under-tail coverts and tail are white, immaculate; the rest of the plumage brownish black, lightest on the edges of the feathers, with purplish golden gloss; the primaries are black, the bill cere, legs and feet deep yellow; iris Naples yellow. The male and female are precisely alike in color. The female has an expanse of wings of nearly eight feet. Its weight is about twelve pounds. The male measures and weighs considerably less.

These eagles pass through several successive stages of plumage, and several years are required before they assume their full dress, with white head and tail. This fact has led unscientific persons to imagine that there is more than one species of sea eagle in the United States, which, however, is not the fact, though the difference in color during the first three years might easily deceive persons not ornithological. During the first year they are nearly black all over, except below, where the basal white of the feathers is somewhat exposed, producing a spotted appearance. After this, in the second year, they become light gray. Unscientific persons distinguish the three plumages as the "bald," "big gray," and "black eagles."

There are but two species of eagles found within the United States—the white-headed sea eagle (*Haliaeetus leucocephalus*)

and the golden eagle (*Aquila chrysaetus*). Both of these occur here in the Highlands. They may be easily separated by their generic characters. In any plumage they may be instantly distinguished by the legs, feathered to the toes in *Aquila chrysaetus*, naked on the whole shank in *Haliaeetus leucocephalus*.

We reach our boat after a pretty hard climb. Finishing our lunch, we once more launch out among the ice-cakes; but rowing is pleasant after sitting cramped and cold for many hours. We are passing West Point; there, between the Riding Academy and Battery Knox is "Kosciuszko's Garden," a favorite spot with the eagles. There, in defiance of gaunts with loaded rifles, I have hunted the eagles that frequent the place during winter, and have learned many curious and interesting things about their habits. If at nightfall I had been unsuccessful, I had only to remove one of the white wooden stoppers which gag the mouths of the cannon in Battery Knox, and upon which is inscribed the legend, "10-inch gun," the size of calibre, and thrust in my trusty "double," then replacing the stopper, it was safe and dry until again wanted, accidents excepted. But once it barely missed destruction, on the occasion of a salute being fired from the battery on the 22d February in honor of the "Father of his Country."

When we have reached home we will sit long at table and recount the pleasant occurrences of the day, and of other days likewise pleasantly employed, and then, as our eyelids grow heavy, as eyelids invariably do after a long day of exertion in the wind, we will wish each other a kind good night, and retire to rest, mutually agreeing that it has been a very pleasant day, and planning others similarly happy for the future.

Highland Falls, N. Y.

BREEDING OF THE PINE LINNET IN NORTHERN NEW YORK.

BY C. HART MERRIAM.

Chrysomitris pinus—Pine Linnet, Pine Finch.—Few birds are more erratic in their habits than the siskin or pine linnet. Occurring to-day, perhaps, in such numbers that one soon tires of shooting them, they are gone on the morrow, and years may elapse before one is seen again. There is, in their melancholy *che-a*, uttered at intervals as small flocks pass in short, waving swoops, far overhead, something sadly suggestive of the cold bleak winds that sweep their northern homes. Yet they are warmly clad, and seem rather to enjoy the wintry blasts that compel most birds to seek a milder clime; and their roaming movements are apparently governed more by some idiosyncrasy in their roving dispositions, and abundance or scarcity of food, than by the severity of the season in the region from which they came.

During the past winter and spring they literally swarmed in Lewis County, N. Y., and thousands of them bred throughout the heavy evergreen forests east of Black River, while many scattered pairs nested in suitable hemlock and balsam swamps in the middle district. They breed remarkably early, and construct large, compact nests, which are usually placed high up on some hemlock or spruce, and well concealed from view. I know of no nest, of equal size, so hard to find. After days of patient search in the evergreen swamps of this vicinity (Locust Grove), Mr. Bagg and myself discovered but a single nest. On the 13th of April we were hunting in a low swamp, near White River, when a solitary pine linnet attracted our attention by hopping about on some fallen logs. In a few moments she flew into a large hemlock, which stood apart from the rest, and immediately disappeared. After carefully looking over the entire tree, a limb at a time, Mr. Bagg noticed a bunch of something almost completely concealed by a cluster of small branches. We were not sure that it was a nest at all till a well-aimed stick drove off the parent bird, which was shot and proved to be the female. With great difficulty the nest was secured, and it contained, at that early date (April 13), two nearly fledged young. It was lightly sheltered on a large limb, about thirty feet from the ground and nearly fifteen feet from the trunk of the tree, and was so nicely hidden that, from a limb directly above, I could not see it at all. One of the young was skinned, while the other now constitutes a contented member of my sister's "happy family," which previously consisted of an oriole (*Icterus baltimore*), three thistle birds (*Chrysomitris tristis*) and a nighthawk (*Cyanospiza cyris*). He attained his full growth shortly after his capture, and has since thrived on a mixed diet, though, like his cousins the goldfinches, showing a decided preference for the thickly-seeded spikes of the common plume (*Plantago major*). Also, like his brighter-plumaged companions, he constantly raises and lowers the occipital feathers when at all alarmed.

In plumage he differs from the adult bird, in having the belly marked with yellow, the wing-bars ochraceous instead of whitish, and the upper parts decidedly tinged with russet. This russet cast is due to the fact that the dark-centred feathers of the back are, in the young, margined with fulvous-brown, which is not the case with the old bird. The nest is a very bulky structure for so small a bird, and its rough exterior, loosely built of hemlock twigs, with a few sprigs of pigeon moss (*Polytrichum*) interspersed, is irregular in outline, and measures about six inches in diameter. The interior, on the contrary, is compactly woven into a sort of felt, the chief ingredients of which are thistle-down and the fur and hair of various mammals. One cavity is lined with horsehair, and measures two inches and a quarter in diameter by an inch and a quarter in depth. This nest is much more flat than that described by Dr. Brewer from Cambridge, Mass., for it measures but two inches in height at its highest point. A considerable mass of dung adheres to the small twigs at one point in its exterior, showing that the bird always "headed" the same way, and was not particularly cleanly in her habits. From the size of the young it is clear that this nest could not have been completed much later than the middle of March.

Not content to let the season pass without making a greater effort to secure their eggs, I accepted, on the 15th of April, an invitation from my brother, C. Collins Merriam, to accom-

* As no specimens of Audubon's *Haliaeetus Washingtoni* have been taken by other naturalists, and as his type specimens do not seem to have been preserved, the species has been abandoned by most ornithologists. However, it may yet be brought to light.

† For an account of "The Golden Eagle in the Hudson Highlands" see Bulletin of the Nuttall Ornithological Club, Vol. III., No. 2, p. 150, April, 1875.

‡ Dr. Elliot Coues' "Birds of the Northwest," p. 570, 1874.

§ Baird, Brewer and Ridgway, Vol. I, p. 482, 1874.

pany him on an excursion through the densely timbered region about Otter Creek (near the eastern border of Lewis County) and Big Otter Lake (Herkimer County), from which it takes its origin. This entire district lies within the area commonly known as "Brown's Tract," and is Canadian in fauna. Never before at any locality have I seen a species of bird represented by such immense numbers of individuals as here attested the abundance of the pine finch. In every part of the forest, from early morning till after the sun had disappeared in the west, there was not a moment that their voices were not heard among the pines and spruce trees overhead. And yet, though among them several days, we were not able to discover a single nest. Never have I searched more faithfully for the eggs of any species, and never has my diligence been rewarded with less success. I at first made a systematic survey of a large number of trees, taking a limb at a time, and then climbed so many that I was barely able to get back to camp, but with no better results.

Their nests are placed so high and amidst such thick evergreen foliage that it is almost impossible to find them. As illustrating the number of this species as well as of the red and white-winged cross-bills (*Loxia curvirostris* var. *Americana* and *L. leucoptera*), it may be worth recording that after firing twenty-two small charges of fine dust shot at the cross-bills as they settled into the top of a single dead hemlock, I picked up fifty-nine birds, of which twenty-eight were red cross-bills, eight white-winged, and fifteen pine finches. I aimed at cross-bills only, killing the finches by chance. Mr. A. J. Dayan was so fortunate as to secure two sets of their eggs from among the pines near Lyon's Falls (in the Black River Valley). The first nest was completed March 11, and contained but three eggs on the 18th. The second contained two fresh eggs April 20 and was left till the 25th, but no more were deposited.

ANIMALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS FOR WEEK ENDING TUESDAY, JULY 9.—One pied-billed grebe, *Podilymbus podiceps*, presented; one jelly fish, presented; one woodcock, *Philohela minor*, presented; five garter snakes, *E. striata*, presented; one milk *Putorius vison*, presented.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to promote for their dogs and please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, urine, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outdoor, contiguous to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, signs of suffering, etc.

WILL THE FEMALE OF THE DOG WORRY SHEEP?—In our issue of June 6 we published an abstract of a paper on the dog, read by Dr. Alexander Madden before the American Institute. Perhaps, of the many papers taken from us, none was more universally copied. The question of whether the female of the dog was given to worrying sheep has been quite disputed. We addressed Dr. Madden, and have been favored by the following reply:

Editor *Forest and Stream*: In reply to your note of June, asking for the statistics which fortified the assertion in my article on the dog, that the female canine was not given to raiding on flocks of sheep unless in her wild state, I can only say that I have not been able to find any well-authenticated instance or charge of the kind against her, notwithstanding I have made diligent search for the same during the last four years. I am, very truly yours,

New York, July 10, 1878. ALEXANDER MADDEN, M. D.

GUN-SHY DOGS.—I give some of my experience with gun-shy animals and the way I cured them. I wish to state that if a dog be healthy and not too far advanced in age, he can almost invariably be cured. But before we cure him we must proceed to find out what first caused him to become gun-shy, and remove it. The cause being once removed, the effect will, in time and by judicious treatment, gradually cease. The first gun-shy dog I had was male, so by his sitting down, one glorious Fourth, on a firecracker just before it went off. I was present at the time and was puzzled to tell which went off first, Carlo or the firecracker. His, however, was not a very bad case; he wouldn't run at the discharge of a gun, but would get sulky and lie up, and you couldn't get him to "lie on" again for an hour unless some Mollie Cottontail would challenge him to a foot race. I first undertook to show him that it wasn't a necessary conclusion that he should be blown up every time he heard an explosion, which I did by means of a box of cups exploded in a room with him just as fast as I could put them on the nipples. He was terribly frightened at first, but soon quieted down and seemed to get used to it, finally yawning and looking at me as much as to say that it was becoming monotonous. That done, I took him out, and the first thing I saw was Carlo scooting over the field back of me after a young hare. I shot it in front of his nose, so that when Mollie tumbled Carlo dived, rolling over and over. Recovering his feet and the hare, he proceeded to mouth it to his great satisfaction, which I let him do to his heart's content. He was never gun-shy again; in fact, when he heard the gun go off he invariably went off too—to find the bird which, from that day to the day of his death, he considered his solemn duty to pulverize to the greatest extent of his capabilities in spite of the sole-leather admonition he was continually receiving. This I consider an almost infallible cure for a gun-shy animal; but the trouble is that, although it betters him in one respect, it is very apt to spoil him in another, as evinced above. Carlo now fills the grave of a martyr. He died in terrible agony, a victim to strychnine and malice. Lately I've had another dog get gun-shy on my hands. I was teaching him to drop to shot by cracking cups and crying "Charge," in a deep, tragical voice. Of course, when I took him out he put his hind hand down and started for home at the first sound of the gun. First I removed the cause of his fright as much as I could by cracking cups as before and leaving out the "deep, tragical voice." He didn't get over it very fast, so I resorted to extreme measures. I let him alone for a week or so and then took him to a pigeon shooting match. In the excitement of seeing the birds flying

and falling he forgot to get scared, and when this flurry was off he was used to the guns and is now all right. I think the main thing is to get the dog's attention drawn from the gun by something more interesting, then keep up the firing till he ceases to notice it. A. H. H. M. A.

WORMS IN PUPPIES.—*Editor Forest and Stream:* The prevailing belief among such sportsmen as I have conversed with as to the age when puppies are first infested with worms and the cause producing them, is that the whelps must be from a month to six weeks old, and that by reason of early weaning, say at four weeks, the change of food (milk, either boiled or raw) produces the parasite. I have claimed that the parasite gains entrance in the whelps in embryo form, during the suckling period, and is received directly from the dam. Veterinary surgeons and physicians do not agree with me, and Dr. W. S. Webb, Secretary of the Westminster Kennel Club, holds to the common opinion as first given. Now for facts coming under my observation, after giving which I trust to see the whole case intelligently investigated and discussed in your paper: May 28, 1878, my bitch Nellie whelped eleven; five of them I destroyed, leaving six with the dam. They were strong, large, healthy pups, and grew remarkably fast, and all were well up to Saturday, the 15th inst. On that day I noticed they were ailing; they lay most of the time on their backs; respiration difficult, at times quick, again labored, and two of them moaned painfully; beating of the heart exceedingly rapid, and bellies cold and swollen. Two of them, evidently, were much worse than the others. I concluded they had worms, as indicated by the swelling before mentioned, and either pneumonia or congestion of the lungs; gave each one a small quantity of pepper in milk. In addition thereto to the two worst cases I gave to one a teaspoonful of champagne, the other a one-quarter teaspoonful of castor oil. On Sunday four of them seemed easier, the other two sinking fast. This Monday A. M., 17th inst., the four are seemingly greatly improved, and the other two are dead. I opened one of them and found the lungs congested, which caused the death. Proceeding farther, by opening the entire intestines, I found by count twenty-nine white worms, one inch long, and two large white do., three inches in length. These whelps had been kept in a nice, clean, dry place, and had a flannel blanket folded in four thicknesses to lie on. Their age was twenty days, including days of birth and death. No sustenance given them except that furnished by their dam, and yet here we find thirty-one parasites in active operation inhabiting the whole of the alimentary canal. The question I ask is, how came they there? E. S. WANMAKER.

Centerville, N. J.

We publish Mr. Wanmaker's ideas with pleasure. But worms exist in the puppies when they are born, even before birth. Parasites are discoverable in innumerable creatures when in utero.

THE PRIZES AT THE PARIS DOG SHOW.—The London Times gives the following resume of the awards at the Paris Dog Show:

Paris, Sunday, June 30—9:30 P. M.—The International Dog Show on the esplanade of the Invalids was open to the public to-day, after two days' private view, while the judges were considering their awards. There are about 600 exhibits, of which one is Swiss, three Belgian, and the rest French and English. Some of the classes are not well filled, but their is quality even where numbers are lacking.

Two English exhibitors take the lead in Mont St. Bernards, leaving only the third prize for a Grindelwald competitor, while three Frenchmen win nothing. There are sixteen fine packs of bounds. M. Baudry d'Asson, a Bonapartist Deputy, showing two, of which one earns a gold and the other a silver medal. Madame Gilly of Asnières shows two elegant Chinese edible dogs, and M. Ravry of Paris a Pomeranian and a Mexican specimen; but these are the only exotics. Although, however, the exhibition might have been more cosmopolitan, it is doubtless more comprehensive than any show on record. Many of the animals are really splendid, and will probably provoke a warm competition at the sale to-morrow week.

Gold medals are awarded to Mr. Macdona of West Kirkby for Mont St. Bernard, to Mr. Alston of Sale for a shepherd's dog, to Mr. Parkinson of Ashton for a mastiff, to Mr. Brooke of Bath for a bulldog, to Mr. Hure of Ilminster for a Gordon, to Mr. McSwiney of Paris for a foxhound, to Mr. Spurgin of Northampton for ditto, to Mr. How of Whitwick for a retriever, to Mr. Bensted of Sittingbourne, for a greyhound, to Mr. Martin of Henfield for a small spaniel. Mr. Fletcher of Stoneclough, Manchester, carries off no less than seven gold medals, namely: For a leveret, terrier, fox terrier, setter, greyhound, water spaniel, and retriever. Silver medals are accorded to Mr. Sidney of Leeds for a Mont St. Bernard, to Mr. Raper of Stockton for a bulldog, to Mr. Richardson of Chartres for a fox terrier, to Mr. Macdona for a pointer, ditto for a setter, to Mr. Kauffman of London for a Gordon, to Mr. Parsons of Taunton for ditto, to Mr. Curry of Stratford-on-Avon for a retriever, to Mr. Large of Doncaster for ditto, to Mr. T. Morris of London for a pug.

The Prince of Wales takes a silver medal for a black and tan Thibet mastiff, ditto for a bloodhound, a gold medal for a black and white setter, a bronze medal for a small spaniel, ditto for a leveret—all of them fine specimens of their class.

Bronze medals are won by Mr. Petrie of Rochdale for a shepherd's dog; by Mr. G. J. Hart of London for a mastiff; by Col. Talbot of Brighton for a bloodhound; by Mr. Fletcher for a pointer; by Mr. W. J. Bayly of London for a setter; by Mr. Dudonit of Sunbury for a setter; by M. Costh of Wallall for a Gordon; by Mr. Brookes for a retriever; by Mr. Coope of Coalville, for ditto; and by Mr. Collingwood of Castlemere for a pug. English fanciers carry off twenty gold medals out of fifty-eight, and a full quarter of the aggregate prizes, not to speak of dogs of English birth or ancestry shown by French owners.

PUPPIES FOR CALIFORNIA.—At our recommendation Mr. W. F. Johnson, of Folsom, Cal., had sent to him two likely pointer puppies from the Neversink Kennel. Mr. Grainger is just in receipt of a letter from Mr. Johnson, in which he expresses himself quite delighted with the puppies: "The dogs arrived yesterday (July 1) in splendid condition, having evidently received the best of care on the journey hither. I am very much pleased with their appearance. I could not have pleased myself better had I selected them. Probably I would not have done as well."

NAMES CLAIMED.—Dr. Henshall, of Cynthia, Ky., claims the name of Gypsy Queen for his black, white and tan bitch

pup by Magraw's (formerly Clason's) Royal Duke, and out of Clason's Queen. Whelped March 12, 1878.

WHELPS.—Philadelphia, May 8.—J. C. Steel's orange and white setter bitch Gill whelped six bitches and five dogs, orange and white. They are by Major Brown's Grouse, winner of first prize at Philadelphia Dog Show, November last.—Whelped at Morris Plains, July 10, Mr. Robert Sewell's red setter bitch, Irish Fairy, twelve pups—four dogs and eight bitches—to Mr. Barnes' Snipe.

SUMMER CRUISING.

CRUISE OF THE SEAWANHAKA YACHT CLUB.

At gun-fire from the Rear Commodore's schooner *Eddie*, the fleet of the Seawanhaka Yacht Club, which assembled in Oyster Bay, got under way at 9:15 A. M., Wednesday, July 10. The command included, besides the flagships, the following craft: *Regina*, Mr. W. A. W. Stewart; *Caprice*, Mr. Hamilton, about to join the club; *Midge*, Mr. W. Iselin; *Blanche*, Mr. O. H. Grundy, and *Petrel*, Mr. J. Hyslop. With a light southerly breeze and light sails set, the fleet, after clearing Lloyd's Neck, shaped a course for Black Rock harbor on the Connecticut shore. Wind fell light and variable all day. *Regina*, with her boom to port and balloon jib rigged out to starboard, soon took the lead of the rest, and keeping her sail in the same position made Black Rock a long distance ahead of the rest. On the way across the sloop *Dudley* fell in with the fleet, and at the Rock, *Recreation*, Mr. Henry C. Sturges, hoisted the Seawanhaka colors and joined the cruise. When nearing the harbor a squall came up, but proved to contain nothing more serious than rain. Up to this time the fleet had kept together remarkably close, and there was only little difference in their times of anchoring. *Regina* first, *Caprice* second, *Petrel* third, *Dudley*, *Eddie*, *Midge* and *Blanche* in the order named. Next day, at five bells in the morning watch, the gun went from the flagship, and the fleet got under way for a long run of sixty miles to New London. Hardly had they cleared the off-shore light when the wind fell light and left the yachts drifting slowly along, with the Middle Ground Light-house to the S. W. and Bridgeport to the N. *Caprice* and *Dudley* displayed a fine piece of seamanship at this point. With the southerly wind at an end and a rapidly rising barometer, the skippers of these two yachts boldly stood, or rather drifted, over to the Long Island shore in anticipation of the coming easterly breeze. Nor were they disappointed, for in a couple of hours they led everything, though to leeward of the whole fleet. Putting up their helms and easing sheets, they came down again to their proper course miles ahead of the ruck. So much for cutting adrift from your leader and having an opinion of your own. With a steady breeze from the S. and E., the fleet bowed along nicely during the afternoon, *Eddie* making a show of some speed, and *Regina*, as a matter of course, almost hull down ahead. *Blanche* did not seem to be doing well, and was easily outsailed by *Petrel*, a yacht only half her size. *Midge* could just hold her own with *Petrel*, owing to the excellent management of Mr. Iselin's skipper, who would always manage to plant his craft on the weather of opponents and so hold them under his lee, and who upon several occasions gained nearly a mile by watchfulness in running out a hit for a coming breeze, which he seemed to detect sooner than others. All lights and buoys were given a wide berth, the smaller craft going altogether too much upon the principle of "follow my leader," when they might have gained much by taking advantage of their lesser draft by going inside of Faulkner's Island and the Cornfield Light-ship. Only two, *Recreation* and *Blanche*, availed themselves of the latter short cut, and so cheated the incoming flood as to crawl up on the leading half of the fleet. They gained a full mile or more by this little piece of close navigation, and their skippers should receive credit for it. *Regina* managed to carry the wind with her clear into New London, and dropped anchor at 5 P. M. *Dudley* and *Caprice*, owing to good seamanship, fetched in about 9 P. M., but the rest of the fleet, which tensiously hung to straight line navigation, had to drift about in the neighborhood of Bartlett's Reef Light the latter part of the night, until, disgusted and tired out, they dropped anchor outside. Early in the morning (Friday) they hove up again and made New London at various hours, coming to off the Pequot House. *Petrel* and *Caprice* went up the inner harbor to provision, but rejoined the squadron in the afternoon, as did also the schooner *Osprey*, Mr. Lord, who had been in to Fisher's Island and other ports in search of the fleet. A hop was given to the yachtsmen in the evening at the Pequot House. Saturday morning the fleet hove up, bound for Newport, with a light wind from N. E. After passing Watch Hill at 8h. 55m., with the wind freshening, Beaver Tail Light was passed at 3h. 45m., and under the lead of the Rear-Commodore Newport harbor was made during the night. From this point the fleet will probably go further to the eastward. The seamanship displayed on the cruise left little to be desired; this applies more particularly to *Regina* and *Midge*. Among some of the others there was rather too much tendency to "jeehawking," guessing the wind from all four quarters in as many minutes, when it was, as a matter of fact, up and down, and uselessly shifting and trimming sail accordingly, but to no purpose. Concerning navigation, however, much has yet to be acquired, as deficiency in this respect is noticeable aboard many of the yachts, arising partly from the lack of proper implements and partly from want of experience. For those that can afford the necessary charts and tools, there can be no excuse, and the meagreness of experience could be supplemented by a little study to advantage. This being the first regular cruise of the club, some allowance is to be made for shortcomings, and we have no doubt the experience of this

year will be borne in mind when again making preparations for a sail away from home.

YACHTING NEWS.

SEAWANHAKA YACHT CLUB REGATTA.—The postponed regatta and annual cruise of this club was held on July 9. According to this programme the yachts of the club began to rendezvous at Oyster Bay, Long Island, the club's headquarters, on Sunday and Monday. Rear-Commodore, O. E. Cromwell, who, in the absence of other flag-officers, had command of the squadron, hoisted his pennant at the main of his trim schooner *Eddie*. *Midge*, *Petrel* and *Caprice* made the harbor on Monday and Tuesday morning. The day set apart for the annual regatta found only these and two open jib and mainsails in port. Though the entries were meagre the sailing was interesting as the boats were well matched in size. Nothing is so unsatisfactory and disappointing as a race among craft of widely differing sizes, in which that clumsy makeshift "time-allocation" is called into play. This one was to be an exception, and it is to be regretted that owing to the parting of gear and somewhat baggy canvas, the smart little cutter *Petrel* could not do herself justice. This yacht had put into Manhasset Bay on her way up, and was beached with the incoming tide near Willis's Boatshop, on the eastern shore. Here she had her bottom cleaned and oiled. The next tide, early on Monday morning, did not run as full, however, as expected, and she remained aground till five P. M., when, with the evening flood, she again got afloat. A little lesson of experience was here acquired. When about to beach your craft, inquire of some native how the floods run, and do not beach at the highest water, but make full allowance for a lesser tide if necessary. Of course, *Petrel's* pretty bottom, steep dead-rise and sharp nose gave the local wiseacres much to talk about, and the usual amount of head-shaking and shoulder-shrugging was gone through with. What mattered it to them if *Petrel* was built on the wave-line theory, or that she was an exemplification of science and intentional design. No, she couldn't sail, didn't have "floor enough," wasn't "stiff enough," "Keels, you know, can't best centre-boarders, any way," and many more of the same sort of cant phrases, continually indulged in by those brought up among the flat-bottomed saucers, and to whom deviation from the standard shape is sacrilege, and bound to be visited by the severest condemnation of fate. Had these well-meaning, but unlearned critics been aboard the *Petrel*, and seen her sail, their opinions might have received a rude shaking, and would have undergone a radical change, for *Petrel* with flat canvas is more than a match for any cabin yacht of her length, either in light winds or in heavy. This was amply proven to our satisfaction during repeated trials throughout the race and cruises, for as soon as sheets were started the least bit *Petrel* not only walked away from everything of her size, but gave craft twice her tonnage all they could do to hold their own. When trimmed in flat, however, she could not hold the wind the centre-boarders did, but this was owing entirely to her poorly setting mainsail and not to the hull. We learn that next season she is to be supplied with a new suit of muslin to sit as flat as the proverbial board, in which event she will play havoc among her sisters. The morning of Tuesday broke clear with a light breeze from the S. S. W. Shortly before 11 A. M. the steamer *Blackbird* hove in sight from New York with the regatta committee on board, consisting of Mr. James H. Elliott and Mr. Chas. Wyllis Betts. It was agreed upon among the cabin yachts to sail over course No. 2 along with the open boats. This was from a line drawn between the sloop *Addie Voorhies* and the club steamer, around the Middle Grand Buoy, thence around Hog Island Buoy and Lloyd's Neck spar buoy and return to Middle Ground Buoy, this triangular course to be sailed over twice, returning to the start in Oyster Bay Harbor after the final round. With the last of the club the first whistle was blown at 11:49 A. M. and the second, ten minutes later, sent the yachts across the line. *Waif* led with boom to starboard, and *Clara* followed close astern. The cabin sloops received a handicap by not promptly crossing, and in an endeavor to outmaneuver each other, did not get away until after the ten minutes were up. The entries and times as below:

THIRD CLASS CABIN YACHTS.				
Name.	Owner.	Area.	Allowance.	Start.
<i>Midge</i>	William E. Iselin.....	297.88	M. S.	H. M. S.
<i>Petrel</i>	J. Hyslop.....	241.12	4 40	12 09 04
SECOND CLASS OPEN SLOOPS.				
Length.				
<i>Waif</i>	Thos. S. Young, Jr.....	92 6	—	12 00 36
<i>Clara</i>	Jas. R. Wood, Jr.....	20 6	4 00	12 01 08

It was a free run to the red buoy No. 2, *Clara* getting slightly the best of it and *Petrel* losing the wind for awhile. *Waif's* balloon jib did some good work for her, and both the little fellows jibed round together, and, trimming aft, were off for the Hog Island. *Petrel*, as soon as the breeze struck again, showed the value of fine lines, and rapidly drew up on *Midge*. At the second turn all were pretty well bunched, but the above order was maintained. On the run to Lloyd's Neck sheets were eased once more, and again *Petrel* cut out some tough work for *Midge*, and run through her lee before the spar buoy was fetched. Considering the difference in size of the two yachts, *Petrel's* performance does her model and her designer, Mr. Hyslop, much credit. *Waif* had increased her lead, and the time at the round was as follows:

H. M. S.				
<i>Waif</i>	1 30 35	<i>Midge</i>	1 31 45	
<i>Petrel</i>	1 31 29	<i>Clara</i>	1 52 12	

It was now a beat back to Buoy No. 2 inside, and all hands trimmed in flat. Here it was that *Petrel* began to lose ground, unable to point as high as *Midge* on account of her baggy mainsail. The wind freshened somewhat, and at a critical moment away went the cutter's topsail sheet—parted at the sheave in the gaff. It not being deemed advisable or of any use to send a man aloft to reef off new ones, as *Midge* so evidently had the race in her hands, *Petrel* bore up for home as soon as she weathered Lloyd's Neck, leaving the sloop a walk-over for the rest of the course. On the second round the wind freshened to a stiff breeze, giving the open boats more than they liked. Just here the superiority of catamarans would have been very apparent, for it was their weather exactly. *Clara* received a "knock-down," one of those undesirable peculiarities from which all our yachts suffer danger, from *Clara* up to *Mohawk*, and *Waif* having a long lead, the little sloop wisely bore up for a harbor as the weather looked threatening to windward. The race was now virtually ended, as only one boat was left in each class. *Midge* and *Waif* took down a reef and made the best of the weather by slackening away and frequent begging. Finally Mr. Iselin's sloop arrived home at 4h. 49m. 20s., landing the Seawanhaka Cup for her owner in 4h. 40m., after a race in which she exhibited excellent weatherly qualities and was handled with marked ability. *Waif* takes the prize in the second class open sloops.

NAHASSET YACHT CLUB.—The second annual regatta of this spirited club will be held off Nahant, Mass., Saturday, July 20. Entries open to all organized yacht clubs. The classification includes, in the first race, boats from 20 to 26ft. long; in the second race, boats from 17 to 20ft.; in the third, boats from 14 to 17ft.; and in the fourth, boats from 14ft. and under on water line. Entries close July 19. Second prize where more than two yachts start. We observe with pleasure that shifting ballast is prohibited and the crews limited to one man for every five feet and fractional part thereof. Yachts to start from an anchor, a method which does well enough among small craft, and has the advantage of making a race which can be followed from the start without continually having reference to the differences in time of crossing the line. Course for first, second and third class 10½ miles; for fourth class, 7 miles. Time allowance based on length of water line plus one-third the overhang. This is much more equitable than the one enforced by the Seawanhaka and Atlantic clubs, which make a heavier charge upon rake of stem and overhang aft than required. The regatta committee consists of Messrs. T. Deland, W. C. Haskell, C. G. Weld, J. P. Hawes, Jr., and P. Grant, Jr. Rules of the Nahasset Y. C. will govern the races.

THE BRITISH SCHOONER ONEAGH.—Dear Sir: I observe in your issue of 27th June a short paragraph about the R. St. G. Y. C. schooner yacht *Oneagh*, in which her owner's unwillingness to race on this side of the Atlantic is characterized as more discreet than plucky. Will you permit me to remind you of one or two facts which must have escaped the memory of the writer of that paragraph?

The first is, that in England we divide yachtsmen practically into two classes—racing-men and non-racing-men—the former naturally forming the smaller though best-known class. The owner of the *Oneagh* happens to be a non-racing man, who cares far more about cruising and covering a large extent of sea than about taking part in a race. His vessel also was built and is fitted, not for racing, but cruising, a very important point. But even were she a racer, and had she competed at home—which she never has—it does not follow that when fitted out for an extended cruise her owner should hold himself ready to race American clippers, prepared for the fight, in their own waters. This should suffice to explain the fact that the *Oneagh* did not race your yachts, apart from the fact that the dimensions of cruising and racing spars vary considerably, that the *Oneagh* is in cruising rig, and, as far as I am aware from conversation with her owner, has not, naturally enough, any racing sails on board. Would it then have been a fair match had one of your clippers raced and beaten her? By the ignorant result would no doubt have been accepted as a great American victory over England, but all yachtsmen must have seen through it and laughed at the triumph. Enough that in former contests, where the competitors were equally matched, your beautiful and speedy yachts snatched the palm from ours. Let *Cetonia*, *Miranda*, *Sea Belle*, *Egeria*, *Neva*, *Sultana* or *Corisande* cross the sea to measure themselves with the vessels of the New York or Seawanhaka fleet, and then if they refuse to start talk of discretion being the better part of their owners' valor; but pray allow a cruising yachtsman, who has carried away such pleasant memories of American hospitality, to sail away without taunting him, in the recognized organ of American and Canadian yachting, with being afraid to match his craft against well-known racers. Yours, F. C. SUMICHAIST.

Halifax, July 11, 1878.

Our esteemed correspondent takes a more serious view of the paragraph he refers to than we intended to imply. Though *Oneagh* is in British eyes but a cruising yacht—not having been built with a view to cheating a faulty rule of measurement—it was hoped that her owner would get her under-way and sail in company with some of the American schooners on some regatta day, so that the yachting public might have a view of the craft under canvas, note her weatherliness and handiness, as well as the set of a Laphorn suit of muslin. As for her speed, we and other yachtsmen fully understand the difference between racing and cruising yachts in Great Britain, and no one expected *Oneagh*, or for that matter any English racing schooner, to hold her own alongside of the American craft; but that the owner of a foreign yacht should fail to grant the public here the slight favor of viewing his craft under sail, when so many opportunities offered, was a disappointment to us and many others, and the paragraph in question was simply an expression of that feeling which could not reconcile the visit of a yacht from 3,000 miles away without the least display of interest in the sport in America, not so much even as to attend the principal event of the season. Besides, Mr. Francis Cope had the privilege of the use of our columns, which we went to the trouble of offering him, and if his refusal to explain his position to the public has resulted in misunderstanding, the responsibility rests with him, not with us.

BROOKLYN YACHT CLUB.—The club has amended its by-laws so as to admit yachts of 17ft. and over in the fourth class. Mr. W. T. Lee, who has been the club's very efficient secretary for many years, handed in his resignation, which was not accepted, the club showing a judicious preference for Mr. Lee's services that does him no more honor than he deserves. Commodore Wallack sent in a letter announcing that the New York Yacht Club preferred following its usual programme, and declined a union cruise with the Brooklyn Club.

BEVERLY YACHT CLUB.—This club held its first regular regatta this season off Nahant, July 6. Champion pennants to first yachts in, without regard to time allowance, were offered besides the regular prizes, to become the property of the yacht winning it the greatest number of times this season. Start flying, *Aerial*, Mr. W. D. Sawyer, won regular prize in first class—time, 2h. 17m. 18s.; *Fanny* won in second class, 1h. 17m. 57s.; and *Psyche* in third class in 1h. 16m. 12s. The pennants go to *Fanchon* in first class, *Fanny* in second and *Psyche* in third class.

NEWBURG BAY REGATTA.—The regular annual regatta, open to all yachts, took place on Newburg Bay as appointed, July 10, and brought together a large gathering of racing craft and others. The famous *W. R. Brown*, which must be recognized as the best of her class; Mr. Livingston's pretty *Flyaway*, the *Geo. B. Dean*, and young McGiehan's first attempt, the *Excelsior*, were among the cracks on this occasion. Promptly at 11 a. m. the preparatory gun was fired from the committee steamer, and the yachts made for the northward

of the starting line. Twenty out of the thirty-two entries appeared ready to race, with numbers on their mainsails as follows:

FIRST CLASS—26 FEET AND OVER.				
Name.	Owner.	Length.	Port.	
Breeze.....	Mr. Manee.....	33 00	Tottenville, S. I.	
Flyaway.....	Van B. Livingston.....	31 00	Uster Park.	
W. R. Brown.....	C. F. Brown.....	27 03	Newburg.	
Corn.....	A. L. Riley.....	32 06	Newburg.	
SECOND CLASS—23 TO 26 FEET.				
Bertha.....	E. Molyneux.....	25 00	Tarrytown.	
Clara S.....	Joseph Silger.....	21 01	New York.	
Mayotta.....	N. Dillon.....	23 11	New York.	
THIRD CLASS—20 TO 23 FEET.				
Lily.....	H. C. Baxter.....	22 06	Cold Spring.	
Vixen.....	C. D. Scriba.....	20 06	Montrose.	
Geo. B. Dean.....	Chas. Schwank.....	21 10	New York.	
Excelsior.....	C. McGiehan.....	22 00	N. Brighton, S. I.	
Gracie.....	A. C. Gould.....	20 08	Yonkers.	
FOURTH CLASS—UNDER 20 FEET.				
Gracie.....	H. E. Belcher.....	15 07	Carlisle.	
Peter O'Brien.....	Theo. Werneke.....	19 05	New York.	
Hi Pl.....	J. H. Dicks.....	16 05	N. Brighton, S. I.	
Jane A.....	James J. Reid.....	14 03	Jersey City.	
Clara W.....	H. B. Westervelt.....	13 04	New York.	
Brothers.....	Wm. Murphy.....	13 07	Jersey City.	
A. S. Ring.....	George Shaw.....	17 06	Newburg.	
Nellie C.....	A. C. Gould.....	20 00	Yonkers.	

Course, from South about around boat off Fishkill, thence to a boat two and a-half miles south, thence to a boat five miles north, thence to a boat off the foundry at Fishkill and back to start, twice over. For the fourth class, the same course once and a-half times around. Wind moderate from S. E., and tide about half ebb. *Gracie* led across at the second gun, followed by *Nellie C. A. S. Ring*, *Corn*, *Gracie*, *Lily*, *Peter O'Brien*, *Vixen*, *Hi Pl*, *Geo. B. Dean*, *William R. Brown*, *Mayotta*, *Excelsior*, *Breeze*, *Clara S.*, *Flyaway*, *Bertha*, *Brothers*, *Clara W.*, and *Jane A.*

The yachts had their booms off on the run to the first mark, around which they hauled in a bunch and stood off for a long leg on the port tack. The *Brown*, in charge of the veteran Ira Smith, who knows the craft and all her foibles by heart, rapidly worked out with a fine lead of the *Geo. B. Dean*, who in turn led the rest down to the second mark. This was rounded by the leader at 12h. 04m., *Dean* at 12h. 05m. 50s., *Excelsior* 3m. later, and *Flyaway* 12h. 09m., *Clara S.*, *P. O'Brien* and *Bertha* following at short intervals, and the rest astern. The fleet then squared away on the run up, and was overtaken by a thunder-squall. The rear craft were struck first, and doused sail, at the same time bearing up; others lowered mainsail only, and scudded under jib; while a few kept everything aloft and suffered the consequences. *Corn* turned turtle without any ado, was followed by *Clara W.*, *Bertha*, and then *Vixen*. The squall lasted but fifteen minutes, but played havoc with the spars and gear of those that were not capsized, and many yachts were obliged to withdraw, *Breeze* being the only one that carried sail straight through. After the squall the wind dropped to a steady breeze for the remainder of the race. The upper stake was reached by the *Brown*, *Breeze*, *Dean*, *Flyaway*, *Excelsior*, *Lily*, *Brothers*, *Brien*, *Clara G.*, *Ring* and others. At the close of the race a second squall put some more craft hors de combat, and the finish was made as under:

FIRST CLASS.				
Name.	Start.	Finish.	Elapsed time.	Corrected Time.
	N. M. S.	N. M. S.	N. M. S.	N. M. S.
Breeze.....	11 27 20	3 46 23	4 19 03	4 13 03
Flyaway.....	11 27 40	3 49 15	4 21 35	4 21 35
W. R. Brown.....	11 28 00	3 44 00	4 16 10	4 06 40
Corn.....	11 20 10	Capized.		
SECOND CLASS.				
Bertha.....	11 27 43	Capized.		
Clara S.....	11 27 35	3 59 15	4 31 40	4 31 40
Mayotta.....	11 27 05	Withdrawn.		
THIRD CLASS.				
Lily.....	11 21 00	Withdrawn.		
Vixen.....	11 21 45	Capized.		
Geo. B. Dean.....	11 26 26	3 49 25	4 22 59	4 22 39
Excelsior.....	11 27 17	3 52 00	4 24 43	4 24 43
Gracie.....	11 19 00	Withdrawn.		
FOURTH CLASS.				
Gracie.....	11 20 45	Withdrawn.		
Peter O'Brien.....	11 21 23	Withdrawn.		
Hi Pl.....	11 23 05	3 19 00	3 55 55	3 52 40
Jane S.....	11 23 00	Withdrawn.		
Clara W.....	11 29 10	Capized.		
Brothers.....	11 28 25	3 11 16	3 42 51	3 42 51
A. S. Ring.....	11 19 35	Passed wrong side of stake boat.		
Nellie C.....	11 19 00	Withdrawn.		

Thus the *William R. Brown* wins in the first-class, the *Clara S.* wins in the second, the *Geo. B. Dean* wins in the third class, and the *Brothers* in the fourth class.

BOSTON REGATTA.—The undetermined race in the first class of yachts, sailed July 4 in Boston Harbor, was re-sailed July 12. The start was off City Point, and the race in charge of Alderman John P. Spaulding and Councilman Com. Coolidge Barnard. The judges were Messrs. Plimpton, Woodward and Wright. Course, twenty miles. Among the sloops *Thistle* made the best start, followed by *Lille*, the famous wind-jammer, *Undine* next and *Nautilus* bringing up the rear. *Thistle*, considered the smartest sloop in Boston waters, had at last found a tough nut to crack. Wind was east, and fresh. *Thistle*, sailed by Mr. Croshie, carried gaff topsail and balloon jib, while Mr. Bryant's sloop was content with a jib topsail. When it came to beating, *Undine* worked out to windward of the lot, for where is the boat that can hold her own with this wonderful craft on a wind? *Lille* and *Nautilus* withdrew. The finish was made as under:

SCHOONERS.				
Name.	Owner.	Length.	Actual Time.	Corrected Time.
		FT. IN.	N. M. S.	N. M. S.
Breeze.....	H. F. Whittier.....	41 05	5 30 04	4 41 22
Belle.....	C. Francis.....	51 05	5 58 12	5 29 08
SLOOPS.				
Undine.....	H. Bryant.....	50 08½	4 27 17	3 57 30
Thistle.....	R. Croshie.....	47 10	4 36 11	4 03 09

NEW BEDFORD YACHT CLUB.—In the second of a series of races for cat-boats, best three out of five, *Euclid* won in 1h. 16m. 44s., beating *Clio*, *Turk*, *Sylph*, *Alice* and *Pester*.

SOUTH SALEM REGATTA.—Saturday, July 13, a regatta was sailed off Salem, Mass., to compensate for the drift match on July 4. Wind from the northward with drizzling rain. Prizes were awarded to first-class boats as follows: Keels—*Lottie*, silver nut-cracker; centreboards—silver ice-pitcher and goblet. Second-class keels—first prize *Aurora*; second prize, *Annie G.*; second class centreboards undecided, but lies between *Fancy* and *Croquette*, on a claim that the *Fancy* did not sail the prescribed course. Third-class cat-boats—*Mirage*, *Whitehall*, *Zephyr*.

NATASKET BEACH REGATTA.—Com. M. J. Kiley has arranged for a grand union regatta to be sailed July 20 off Nantasket Beach. Entries close the day before. There will be three classes for keels and three for centreboards.

WARWICK YACHT CLUB.—The first annual regatta of this club was sailed July 11, in Narragansett Bay. There were only four entries: *Hildegard*, H. L. Clark, 26ft. 10in. long, and *Sadie*, W. R. Tillinghast, 23ft. 2in. long, in the sloop class, and the *Warwick* and *Venona* in the class for cat-boats. The meagre entries were attributed to the fact that the race was not sailed at Newport, and to the absence of many craft on cruises. Course, 13 miles. Regatta Committee, Messrs. ff. L. Clark and Chas. V. Chapin. Challenge pennant for each class. *Hildegard* was away first, followed by *Sadie*, *Warwick* and *Venona*. The wind was light, but came out a little stronger from the S. off Hope Island. *Hildegard* and *Warwick* rounded the buoy first in their classes, and *Venona* retired. On the run home the wind freshened a little and the race terminated in favor of the two leaders. The Warwick Club will hold their Union regatta on the 24th inst.

STONY CREEK REGATTA.—The proprietor of the Flying Point House at Stony Creek, Mr. J. B. Northrop, arranged a successful regatta among the small boats in the vicinity, and Mr. Beach, formerly of the *Sun*, acted as time-keeper. There were five entries. *Carrie V.* got away first and *Fleetwing* second. Course 12 miles. *Carrie V.* won in 1h. 35m. She carried 218 yards of duck. In the race for cat-boats the course was from the Hotel round Thimble Islands and return. *Libbie* won in 43m. 25s. A tub race of 500ft. distance was won by Mr. Henry Frisbie in 5m.

WISCONSIN YACHTING.—The Oshkosh (Wis.) Yacht Club held their first regatta of the season on Lake Winnebago, Thursday, July 4, and boats were present from Chicago, Racine, Green Bay, Neenah and Fondulac, making a fleet of nearly thirty. The boats were started at about 4 o'clock p. m., and as the wind was very light they did not make the race in the required time, so it was sailed over again Friday, July 5, with but very little better success, as there was not wind enough to keep the sails full more than half the time; but they managed to get around in time to call it a race. The winning boats were as follows: *Nioba*, of Oshkosh, first prize in second class; *Penequa*, of Oshkosh, second prize in second class; *S. M. Hay*, of Oshkosh, first prize in third class; *Altheda*, of Oshkosh, second prize in third class; *Vulcan*, of Oshkosh, third prize in third class. The first class has not been decided yet. The boats came in so late that the judges had left, and it is thought they did not make the race in the required time. The course was about six miles, twice around, to be made in four hours. Leo.

BOAT AND PADDLE.

BLUFF CITY ROWING ASSOCIATION.—The clubs belonging to this association held their regatta Sunday, June 30, at Mount City, six miles above Memphis. Entries comprised four six-oared gigs from the De Soto Club, Excelsior Club, Bluff City Club and Aldine Club. Course, a mile and a-half and return. Aldine had the inside, Excelsior second, Bluff City next, and De Soto on the outside. Boats were sent away at 5 p. m., the Excelsiors being apparently the favorites and De Sotos second choice. These two took the lead, the Bluff City Club a good third, and the Aldines bringing up the rear. The leader was pulling 40 and the second boat 37. The Excelsiors made a bad turn, and De Soto and Bluff City fouled while rounding, thereby killing their chances. Excelsior came in an easy winner, Bluff City second, and Aldine third. Time, 13m. 08s. Skiff races ended the day's sport, Tate winning in 4½m.

NORFOLK DEFEATS WASHINGTON.—The Annapolis Club of Washington arrived at Norfolk July 9, and made preparations to pull their race against the Elizabeth Club of Norfolk. A fresh breeze somewhat interfered with the event. The start was finally made, with the Annapolis crew slightly ahead. Norfolk, however, soon gained, closed the gap, and the boats fouled, their oars locking. This foul was decided against the Washingtonians. From this point Elizabeth went rapidly to the front and turned about a hundred yards in advance. They had the race in hand and won easily in 14m. 20s. Annapolis fouled a tug, though by that time the race was virtually lost by them. The Mayor of Norfolk presented the prizes at the Opera House in the evening.

BOATING ORGIE.—Members of the Meteor Boat Club of Hoboken, N. J., are pulling their eight-oared large Comet up the Hudson on an extended visiting tour. They left their quarters Saturday, July 13, at 5 p. m., for Rockland. Next morning they made the run to Caldwell's Landing. Thence to West Point, which place they left again Sunday evening for South Marlborough. Monday they left for Catskill via Roundout. There they remain for several days, when they will return to New York, making the distance rowed about 222 miles. Teats and camp equipage were taken along.

KEOKUK REGATTA.—This event was successfully carried out July 4, on the Government canal, near Keokuk, Ill. The judges were Fred Haskell of the Farraguts, and T. M. Garrett, of Burlington; S. C. Bartlett, of Peoria, referee; Mr. Wiley, of Burlington, and C. Hornaday, Keokuk, timers. At 3:30 the first race, for single sculls, was called. Three entries, Denslow, Darlington and L. H. Jones. Denslow led off, and continued to increase his lead the whole way, winning in 17m. 18s. The second race was for model boats, one mile straight away. Entries, E. C. Redman and Eugene Woillard, of the Quincy Club, and C. Maxwell and F. Williams of the Keokuk Club. The former won easily in 10m. 30s. The third race was for gigs, two miles straight away. Two entries, Peorias and Chicagos. The former led at the start; on the last mile Chicago closed on her, but Peoria having a light paper shell against the heavy wooden boat of the Chicagos, managed to win in 17m. 23s.; Farraguts, 17m. 29s. Next race was between six-oared barge of the Peorias and four-oared boat of the Keokuks, one mile straight away; won by Peoria in 8m. 2s. Tnh and swimming races closed the day's sport. The Keokuks propose joining the Mississippi Valley R. A. Burlington failed to send a crew, as they had nothing in training for the event.

NARRAGANSETT DAUNTLESS CHALLENGE.—The Dauntless Boat Club refuses to accept the challenge from Providence as worded, but say that a race for six-oared gigs with coxswains will be entertained. Probably nothing will come of the challenge, as Narragansett has no suitable boat for such a race.

COURTNEY-HANLON.—All attempts to arrange definitely for a race between these two have failed, as we expected. It seems to be to the interest of both scullers to keep apart as long as they possibly can.

WINONA BOAT CLUB.—July 5th, this club held a formal opening of their new boat-house, at the foot of Henderson street, Jersey City. A series of races was instituted, the single scull race being won by W. Van Nuyse in 6m. 16s.; course, one mile and a quarter, with turn. In the pair-oared gig race

W. Wild and J. McMahon won in 6m. 15s. The last race was between a six-oared barge and four-oared gig, won by the latter in 6m. 5s. Mr. C. B. Green, Argonauta R. A., acted as referee.

HARVARD-CORNELL FRESHMEN.—It will be remembered that after having failed to make a match with Yale, the Harvard freshmen sent a challenge to Cornell, which was, after some hesitation, accepted. Cornell naturally enough preferred forming a six, as it seemed doubtful enough if she could get an eight together. Harvard seems to have acted rather hastily, and may find out that she has harder work out for her than she expected. They have been in training for a long time, but so far as one can judge the tables seem to be turned this time, and the same advantages which Harvard had over Yale at New London now seems to be on the side of Cornell, and the Cambridge crew suffers from too light material. Moreover, the crew from Massachusetts lacks an efficient coach and the regularity and vigor which one might infer. The average weight of the Harvard crew is 154 lbs., and average age 20. Against them Cornell has pitted a crew weighing on an average 158½ lbs., and their age nearly 21. Goddard, the single sculler, coached them for awhile, and Crocker, '79, gave them attention at odd times, but there has been so far little system in their operations. Their stroke is a copy of Captain Cook's famous Yale stroke; in other matters they follow the customs of the regular 'Varsity eight, which showed to such advantage on the Thames recently. The general impression is, however, that Cornell's lot is still a good bit ahead of their opponents in nearly all essentials, and that the crimson will probably have the best of it at the finish. The race comes off July 17, and in our next issue we will have a full account from our special correspondent.

STADACONA ROWING CLUB.—J. N. Gregory, Esq., of Quebec, Canada, has been appointed Commodore of this club.

ROWING RIFLES.

Shoe-wae-cae-mettes may enter for the national regatta at Newark. They will be the guests of the Eurekas.....It is simply outrageous to say that Mr. Geo. Lee "threw" the race at Henley. Scurrilous letters about him were sent to England and only too gladly published there.....Eurekas are putting in regular work for the coming national regatta at Newark.....The chamber of the Common Council of that city has been tendered the N. A. of A. O., and special police arrangements will be devised to secure a successful regatta.....A rowing regatta for professionals will probably be held in Dorchester Bay, Boston. Evan Morris, Jobu Biglin and others are expected to enter.....A six-oared race for amateurs is also talked of.....Hanlon-Ross race at St. John, N. B., takes place July 25. Easy work for Hanlon.....Plaisted has challenged Rangan of Boston; no answer yet.....Glass, of Philadelphia, built the pair-oared boat rowed by the Ward Brothers.....Frederick Johnson is looking out for fresh laurels since his victory at Boston, July 4.....Hanlon damaged his Elliott shell recently while practicing at St. John, but not beyond repair.....Reagan now states that he will row Plaisted a five-mile race at Springfield. Step up, Fred.....Ridgfield Association has been reorganized under the presidency of General Shaler.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Centropristis atrarurus</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archosargus probatocephalus</i> .
Salmon Trout, <i>Salmo conflua</i> .	Striped Bass, <i>Morone saxatilis</i> .
Land-locked Salmon, <i>Salmo gairdneri</i> .	White Perch, <i>Morone americana</i> .
Black Bass, <i>Micropterus salmoides</i> .	Weakfish, <i>Cynoscion regalis</i> .
<i>M. nigricans</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
Macalouge, <i>Esox nubilus</i> .	Spanish Mackerel, <i>Scomber maculatus</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Cero, <i>Cybinus regale</i> .
Yellow Perch, <i>Perca flavescens</i> .	Boulton, <i>Sarda yelamys</i> .
	Kingfish, <i>Menticoccus nebulosus</i> .

TROUT FLIES IN SEASON FOR JULY.

Little Egg, No. 12.—Body and feet of orange and yellow, mohite and bare ear mixed; wings, bright hyaline, slightly mottled; setae, same as wings.

Lightning Bug, No. 10.—Body of equal parts, of dark brown, and black mixed, tipped with yellow; feet, of feathers from the English grouse; wings, double, the inner wing black, the outer wing a yellow brown.

General Hooker, No. 9.—Body made of bright yellow and green, ringed alternately; feet; red hackle; wings, of the tail feathers of the ruffed grouse.

Little Claret, No. 11.—Body and feet, dark claret mohair, slightly tinged with blue; wings, of the bittern, or brown hen; setae, dark brown.

Claret Fly, No. 9.—Body, dark claret; feet, black; wings, of the brown hen.

Petrid Green, No. 10.—Body, feet and wings, a pale green.

FISH IN MARKET—RETAIL PRICES.—Bass, 20 cents; blue fish, 6; salmon, 25; mackerel, 20; weak fish, 10; Spanish mackerel, 15; green turtle, 15; halibut, 15; king fish, 20; black fish, 10; flounders, 8; porgies, 6; sea bass, 18; eels, 18; lobsters, 10; sheepshead, 20; Canada brook trout, 50; pompano, 25 cents; hard crabs, per 100, \$2.50; soft crabs, per dozen, \$1.50.

Salmon ceased coming from the Provinces. Bluefish in great plenty from all along the coast. Sheepshead are scarce, a few from Baraegst. Striped bass scarce, a few coming in east from Martha's Vineyard. Mackerel very scarce. Spanish mackerel coming in slowly from the neighborhood, but in good quantity from the Chesapeake. No whitebait to be had. Consumption of fish in the neighborhood of New York notably increased by the opening of new places of summer resort, three houses—Manhattan Beach, Cable's and the Brighton—using 3,000 pounds of fish daily. Saratoga demand increasing.

MASSACHUSETTS.—New Bedford, July 15.—Bass fishing has been extremely successful at Cattybank the past week. To-day a large "trunk" or leather-back sea turtle, captured by the smack *Tranet*, was brought in, weighing 950 lbs. Recently I took a hand at the black bass, with which some of the large ponds near here are stocked, catching 43, the largest weighing 4½ and 5 lbs. each.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported the past week has been 74, viz., 14 from the Banks, 47 from Georges, and 13 from mackereling trips. There is no encouraging news from the fleet either off-shore

or in the Bay St. Lawrence. The receipt of codfish for the week have been 160,000 lbs. from the Banks and 650,000 lbs. from Georges. Halibut receipt, 280,000 lbs. Bank and 18,000 lbs. Georges.—*Cape Ann Advertiser*, July 12.

RHODE ISLAND—Rock Island, July 13.—Mr. Joseph O. B. Webster, of New York city, made two large catches of bass on Thursday and Friday of last week (July 11 and 12), off the grounds of the Ocean View Hotel, at Block Island. There were five in all, and weighed 7, 23, 49, 5 and 50 pounds respectively. They were all caught from the private fishing stand of Mr. Henry Steers, of New York, erected near the hotel. Messrs. N. G. Guild, Dr. E. Y. Bogman, C. H. Guild and Senator Dyer, of Providence, went bluefishing this morning (July 13) from the Ocean View Hotel, Block Island, and caught in one hour thirty bluefish, weighing from five to seven pounds each. Tautog are also biting well.

CONNECTICUT—New London, July 15.—To-day closes the trout season, the law coming in operation on this date. On Saturday I caught a fine string, sixteen in all, in two hours' fishing, and was somewhat surprised to find some of the females in spawn. Is this not very early for trout to spawn? Black bass do not bite well now, and no luck is reported. Have been once this month; used all kinds of baits, artificial flies, frogs, worms, crickets, grasshoppers and minnows, and only caught four in ten hours' fishing. Striped bass are plenty at Rope Ferry bridge, but can't be induced to take the bait. What shall I use; have used crabs and eels? MISAL.

NEW YORK—Mecham Lake, July 13.—Mr. W. E. Webb, of New York, caught at Char Pond to-day three speckled trout, weighing in the aggregate eleven pounds, the largest weighing five pounds. This is the best string taken this month.

Clayton, July 14.—Never was fly fishing for black bass better than at the present, and only for the discomforts of casting while sitting in a boat, I should declare the sport almost equal to that of taking the tattooed beauties of the Adirondacks. Flies tied on Nos. 1 or 2 Limerick hooks are large enough, and those found killing for trout will take the dusky sports of the St. Lawrence River. A ten-foot rod, weighing nine to twelve ounces, is the thing when you are provided with the right sort of a landing net. Those who troll with spoons or fish with minnows are having what they call capital sport, but none of this sort of fishing for those of us who know how to "ting the fly." We are now on shore, and are catching eels; on every side they are squirming. Never before was I inside a ring quite so crooked. But enough of eels or any other sort of fish that know not how to appreciate the beauties of the charming flies we offer them.

J. B. McH.

CUM GRANO SALIS.—Merely the force of association. We do not abate a jot or tittle of that hyperbolic license which is everywhere and always recognized as the inalienable right of the narrator piscatorial; and, without insinuating aught in malice, we write that heading for "Old Salt's" fish report, simply because his own name suggested it. Otherwise it is salt which has lost its savor, and cannot be salted. Having read in the *Syracuse Standard* the statement of "XX," that fifty bass in one day was the largest of the season in the vicinity of the Thousand Islands, "Old Salt," Mr. T. G. Alford, sees the gentleman's fifty and goes "XX" one "X"—yes, a half a dozen of them, better. Herein as follows:

"I desire to state that I have been here—'Clayton,' not 'Alexandria Bay'—twenty-four fishing days. My catch of black bass up to this p. m. for the time is 1,320, or a daily average of 55. My best days' fishing are 53, 59, 66, 71, 79, 79, 80, 100, 103, 105, 114—all black bass. My entire catch of all kinds of fish to date, in number, is 2,001. I have always fished nearer Clayton by from five to eighteen miles than to Alexandria Bay. Whatever may be the great attractions at Alexandria Bay, Clayton is the place for fish, good hotels and competent oarsmen. Quite a number of gentlemen here at Clayton have more than one day each caught their 50, 60 and 75 black bass, notably Mr. Crane, of Brooklyn; Messrs. Lawrence and Brandreth, of New York; Mr. Barbour, of Utica; and young Messrs. Andrews and Ruger, of Syracuse, etc. Good fishing, cool nights and good health all assured.

NEW JERSEY—Barnegat House, July 12.—Weakfish are beginning to bite well, and our boats come in to-day as follows: "Vapor," Capt. Parker, with Messrs. Ridgway & Co., of Philadelphia, seventeen weakfish. The "Sarah," Capt. Potter, with Mr. J. Wan, of Troy, N. J., nineteen weakfish, two kingfish. The "Carrie," Capt. J. Falkenberg, twenty-two weakfish.

ARTHUR.

Atlantic City, July 14.—Fishing good past week. Sheepshead, kingfish and flounders are biting freely.

ROB.

PENNSYLVANIA—SCHUYLKILL ANGLING.—Mr. Vandevere, whose experiences with the fish in the Schuylkill should entitle him to speak with authority, contributes to the Philadelphia *Sunday Post* these directions for fellow craftsmen:

"Latayette Station, on the Norristown branch of the Reading road, is a favorite spot for bait fishing. Take a boat and cross over to the west side of the river, and fish from the soap-stone quarries. A few hundred yards below the ferry the water is deep. Angle with float in about six feet of water, using for bait crawfish and minnows. A more favored spot with anglers may be found a quarter of a mile north of the ferry, on the west bank of the river, opposite a small island, which may be easily found. Fish from a point of rocks, which form a deep pool on either side. The ground is well shaded. Angle with float, allowing it to drift close to the rocks. A fair basket may be taken from this point at any time. The deep water from that point down to Flat Rock dam furnishes good trolling grounds. In the deep pools at the foot of Flat Rock dam bait fishermen are often successful in making fine catches. A quarter of a mile below the dam fair bait fishing may be found in the deep hole at the head of the railroad tunnel. The fish that have been taken here run above the average size of those caught in the river, the favorite bait being crawfish. Good fishing may be had one mile down from that point to the Falls of the Schuylkill, and trolling is also fair. There is good still fishing for bass at the Falls of the Schuylkill and Wissahickon, and it has been unusually good this season. I have heard of several good messes of bass being taken at Belmont Landing, but cannot vouch for the same."

—Philadelphians may find fair trout fishing at Trout Run, a little stream near Kirkwood. Take the 8 A. M. train from

Vine street wharf, Camden and Amboy Railroad, to Kirkwood. Mr. Sharp there will give needed directions. A short rod is the one to take.

MICHIGAN—Crystal, July 8.—*Friend A.*: Fishing has been and is good. Silver rock bass and pickerel have been taken in large numbers and good size. Black bass commenced biting freely, taking live minnow or shiners, still-fishing. I fish with a light bass rod, with multiplying reel, float and small sinker, single gut leader with hook, snell on small piece of gimp, and cast off from boat. We caught some splendid fellows, weighing from two to six pounds. The great trouble is to keep your bait away from perch, for they take it as soon as it strikes the water, some weighing two pounds. There are thousands of small black bass, always accompanied and guarded by the old ones.

O. L.

THEOLOGY AND FISHING.—A party of Pan-Anglican clergyman are now pan-angling in the wilds of Wisconsin.

POTATO BUGS, FARMERS AND FISH.—Did any ardent angler ever try a potato bug as a lure? It's sure to kill—that is if the fish eats it. The farmers near Saratoga Lake, N. Y., were glad at heart the other day when they saw the potato bugs, which had started out to fly across the lake, fall into the water and into the jaws of the fish therein, which leaped up to receive them. But it was not so funny when the fish died from indigestion and were cast up in great numbers upon the land.

This is a hint for that man who is always hooking and then losing the "biggest bass in the lake." Just try a potato bug fly, and when the big bass escapes next time you may enjoy the grim satisfaction of knowing that he's done for, anyway. When he comes up for the inquest he may prove not to be such a wonderfully huge fellow after all.

CURIOSITY OR JEALOUSY OF BLACK BASS.—I notice a communication on this subject in your issue of June 20. In Wakefield, some years since, in trolling with flies I was foolish enough to have five flies on my gut leader, all of them brilliant, and two of them the scarlet ibis. I was rowed over a noted spot, rocky bottom, several times without success, when finally the said fly was taken by a very small bass, not over six inches in length, who was so small that I concluded to allow him to trail; but to my surprise the flies had not passed over ten feet of water when, if you can credit it, all of them were taken, and by fish of good size. The result was that, although I gave them the butt, the strain in different directions was too great, and after a moment or two the leader parted and I lost them all. These four fish had evidently become jealous of the small bass already hooked, and thought that he was having "a good thing all to himself." On another occasion on the same day in the same pond I was casting with two scarlet ibis, when I struck one fine fish, and while I was playing him near the boat another smaller fish struck the other fly, in my plain sight under water, and both were captured. The latter fish was unduly excited by the actions of the one already hooked, and ran after the fish exactly as a brood of young hens run after one who has gotten some choice morsel in its beak. That these fish, who do not intend to bite, are excited by the action of those who are hooked is in my experience certainly a fact. Whether they are moved by curiosity, jealousy, or some other emotion, is not for me to say; but it is certain that a second fish will invariably take the second fly, if allowed to, after one is hooked.

D. F.

TO PRESERVE SHRIMP FOR BAIT.—We salt them down here, first taking off the head or shell and washing them clean. They will keep nicely for some time this way. The salting seems to make no appreciable difference to the fish. I have tried trolling for trout or weak fish with a revolving spoon, as you once advised a Corpus Christi correspondent to do, without any success. The same must be said of that formidable looking trap—the eagle-claw. I don't think a gamefish can be induced to go near it.

Galveston, July 6.

TROUT EATING MUSKRATS.—Yarmouth, N. S., July 9.—While fishing in the Carlton River, in this county, a few weeks ago, I caught a trout weighing 1½ pounds. Opening the fish, I found two young muskrats about the size of full-grown mice. May not your correspondent of July 4th have found the same? I do not see how trout can go into the woods and catch mice, but have no doubt they will take almost anything in the water, from a fly or worm up to a young duck or a frog. Yours truly,

S. K., Jr.

It is quite possible for trout to catch mice swimming in the water. The old guides, who accompanied the party in the North Woods, would not have mistaken mice for young muskrats.

BASS FISHING IN NORTH ALABAMA.

The attention of lovers of the rod generally is called to the excellent fishing grounds found on the Tennessee River and its tributaries. The greatest inland fishing centre and the most noted may be found on the "Muscle Shoals," a section of the Tennessee River lying in North Alabama, covering a distance of thirty miles, and extending from the mouth of the Elk River to the town of Florence, Ala. By reference to "Hallowell's Sportsman's Gazetteer" any one may find plain and accurate instructions for reaching these waters. Look under heading of Alabama for Landerdale County in the directory, and every word with reference to the game and sports of these magnificent grounds, as given by Mr. Hallowell, may be verified by a visit to them. What has been done in the way of angling along these shoals would fill volumes, exhibiting some of the rarest and finest sport in North America.

The geological formation of the river's bed is such that the mighty stream has, with apparent difficulty, worked out its present channel, and it is a notable fact that no change or alteration of sufficient importance to be noticed has occurred in the past century. Great pools, eddies and expanded areas in the river are to be found all along the shoals, produced by projecting ledges of rock, in which countless numbers of the finest bass sport and frolic undisturbed, except by an occasional buffalo hunter in his dog-out with gig and torch, producing at times a scene both picturesque and lurid. But these gig men rarely ever get more for their trouble than a blunted prong in throwing at the bass; for while the bass may become very much interested at this invasion of his territory, he adopts practically the sentiment that "distance lends enchantment to the view," and keeps a safe space between himself and his would-be captor. That he is curious upon all new demonstrations is a fact well known to those who

Inca, Miss.

GAME IN SEASON FOR JULY

ARKANSAS—*Van Buren, June 30.*—Our last winter and spring were noted failures as game seasons. Ducks were remarkably scarce all winter, and the snipe season was likewise very far behind. Even Viue Prairie, generally a very good snipe ground, did not afford anything like former sport. But after falling a all other more convenient points, with a

DITTMAR POWDER.—*Editor Forest and Stream*: I prepared ten target pads of 30 sheets of hardware paper, 12 inches square; loaded four shells with three drachms Dittmar powder, $1\frac{1}{2}$ oz. No. 7 shot in two of the shells; put two pink wads over the powder; in the other two one wad over powder. Then loaded four shells in the same way with large Lightning No. 6 powder. I shot at the target at 35 ds., with the following results: Dittmar with two wads, average pattern 100 pellets, penetration the whole pad; with one wad, average pattern 98, penetration 25 sheets. Black powder with two wads, average pattern 93, penetration whole pad; with one wad, average pattern 69, penetration whole pad. The above results go to show that with two wads over the powder the Dittmar gives as good pattern and penetration as the best black powder, while it has the following advantages: It makes little report, very little

weepstakes at pigeons, 25 yards rise, five traps and 80 yards bound.
Bird and bird.

Bowling Analysis.—Harvey, 84 balls, 23 runs, 4 maidens, 2 wickets. Stevens, 36 balls, 18 runs, no maidens, 1 wicket. Spregue, 74 balls, 11 runs, 6 maidens, 6 wickets.

SIX DAYS WALK.—John Ennis and George Guyon, the Chicago pedestrians, are walking a six days' walk at Buffalo, N. Y. They started at midnight of the 14th.

HARLEM ATHLETIC CLUB.—The regular open handicap games of the Harlem Athletic Club took place on the grounds of the Manhattan Club, Eighth avenue, this city, last Saturday. Three events were decided, comprising a two-mile walk and two dashes of 220 and 440 yards respectively, and in the three there were the usual number of 129 athletes entered. Ninety contested the 220-yard dash, in trial heats, in which the winners were: First heat, C. E. Totter, Manhattan Club; second heat, E. H. Van Arsdale; third heat, M. H. Burch, Harlem Club; fourth heat, W. R. Brown, Manhattan Club; fifth heat, George Reblet; sixth heat, George Brady, Harlem Club; seventh heat, L. A. Sylvester; eighth heat, David E. Bradley; ninth heat, F. W. Muheim. The race was finally won by C. E. Totter in 23½s. W. R. Brown taking second place, and George Reblet third, displacing Burch, who was run off the track, thus disqualifying. The 440-yard dash, which was next contested, had fifty entries. The trial heats were won as follows: First heat, Ralph Voorbees; second heat, E. Arnold; third heat, F. Miller; fourth heat, T. K. Hastings; fifth heat, W. S. Pryor; and the final heat gave the race to Voorbees. E. O. Holste essayed to beat the fastest mile record of 6m. 30s., but although fighting gallantly, made the mile in 6m. 32½s. The two-mile walk, after an interesting struggle, was won by J. H. Croll, S. A. A. C.; time, 17m. 12½s.; P. McCaffery, second—time, 17m. 21½s.; W. H. Purdy, G. A. C., third—time, 17m. 51½s.

—Frenchmen are proverbially epicures. French dogs ought to recognize what's good to eat when they smell it. All the dogs in the Paris Dog Show ordered Spratt's Dog Biscuit.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

W. A. G., New Dorp.—Have no blanks for pedigrees.

L. D., Washington.—Pedigree first-rate. Enter the dog as native, or English setter.

C. S. M'K., Stamford.—No rules for pistol shooting published which are standard. We send you last report, N. R. A.

SUBSCRIBER, Pine Glen, Pa.—Send your name to this office, otherwise we can neither use nor return your manuscript.

M. Y. R. A., Utica.—Of these two scores, which wins: 5 5 5 4—23; 5 5 5 3—23? Ans. The first, because the second has one inner.

G. A., Dover, N. H.—You will find laws of boat racing in Eagle-bird's "American Rowing Almanac." Will be glad to hear from you.

MONEY ORDER, Allegheny, Pa.—Your address was incomplete as given in your letter of July 11. Please send full address to this office.

D. D. M., East Rockaway.—Choking one barrel for long shots might be most advantageous. Choked guns are at their best with No. 4's and B. B's.

C. H. B., Philadelphia.—A pup should be spayed when he is five or six weeks old. This operation is fully described in our issue of June 28, 1877.

A. T. H., Troy.—The arm you write about we do not know. If you hear nothing from them write us again. As to spying see answer to C. B. H.

W. C., East Saginaw.—Write to Herreshoff Manufacturing Co., Bristol, R. I. They will probably send you plans of a catamaran for a consideration.

SUBSCRIBER, Stamford, Conn.—The woodcock season on Long Island begins July 3. We presume you would have no difficulty in finding birds there next month.

E. M. M., Washington, N. J.—As it has just been introduced it would be difficult just yet to judge of its durability. See no reason why it should get out of repair.

A. K. F., Sing Sing, N. Y.—Our opinion as to the legality of the action of the Westchester county Supervisors in extending the close season for woodcock was given last week.

W. N. C.—See answer to "Bird Lime." If you wish a hook on Text-derry see Correspondents' Column, F. & S. of a recent date. If you wish for instructions for the care of birds, send to Chas. Reiche & Bro., Chatham st., New York.

MISAL, New London.—Use clear shellac varnish for the deck coverings of your shell. Put on one coat, rub down smooth, then another, treating it similarly, and a light third coat, if the canvas is new, otherwise a single coat may suffice.

A. C. T. B., Lake Megantic, P. Q.—Wild rice would find a ready market if any one should gather it. Some enterprising man might dispose of a large harvest of rice by advertising it in this paper. See our game columns for notice of wild oats.

J. H. B., Boston.—With the best disposition in the world it is against our rules to discriminate between rifles. All we can say is that the rifle offered you is good. You must have seen the high scores made by it quite recently, as published in this paper.

ALBANY, N. Y.—I have a white fox terrier about two years old. He sheds his hair so constantly and profusely as to be very annoying. What can I do for it? He is healthy and appetite and spirits good. Ans. Good grooming and plenty of exercise is the best remedy.

ENQUIRER, Belleville.—Snele S., formerly the Bella, and famous in New Orleans waters, was built by Pat. McGlehan, of Pamrapo, N. J. She was launched July 15, 1869, and is 27ft. 6in. long, 11ft. beam and 31in. deep. She has splendid record, and she has few equals in speed.

H. F. F.—Bogardus' "Field, Cover and Trap Shooting" may give you what you want. There are no particular rules for the conduct of a glassball club captain in the field. The referee is supposed to direct the shooting. The captain should preserve order, and serve as a figure-head.

W. J. S., Princeton.—I send you a snake, found by me in a black bass which weighed two pounds. Pray inform me what it is? Ans. The snake which you sent appears to be a young hog-nosed adder (*Heterodon platyrhinos*). It is very different in appearance from the adult of that species.

A. F. H., Coatesville, Pa.—What is best thing to kill fleas on dogs? My Laverack is full of them; put coal oil on, rubbing well all over. Heir comes out now, but not the fleas. Ans. Insect powder each day for three days and then wash with carbolic soap, but you must see that your kennel is free from them also.

J. R. D., Norfolk, Va.—Have muzzle-loading gun that is rusty inside near the breech. Can same be removed by oil? If so what kind and how used? Would fine emery and oil injure the barrels? Ans. Would not advise you to use emery. A scratch-brush would be better. Oil the rusty place well. It is better to send it to a gunsmith.

C. C. O.—You will find in the Catskills fair trout fishing. Go to some of the mountain streams in Greene County. If you go to the top of the mountains about Hunter, Windham, or any of the neighboring towns, you will find plenty of bear tracks, and with a little patience may readily strike a bear. There are partridges and grouse there.

W., Attica, N. Y.—See answer to "Bird Lime." An excellent aquarium cement is prepared as follows: Two oz. powdered litharge, one oz. dry white lead, three oz. boiled linseed oil and one oz. copal varnish; make into a thick paste. Or make a putty of litharge and glycerine. These cements require at least one week to set.

W. A. K., Johnstown, Pa.—In a piece of ice I found a common red angle worm, which on being released crawled off lively as a cricket, none the worse from his long cold imprisonment. How is this? Ans. Animals of low grade, like the one in question, can endure without serious inconvenience extremes of heat and cold that would be fatal to more highly organized beings.

C. W.—Will you kindly inform me as to the derivation of the terms six-penny, eight-penny and ten-penny nails? Ans. The origin of the six-penny nails, etc., is supposed to be derived from the fact that in early times, so many nails were sold or made for a penny. In the thirteenth and fourteenth centuries, in rural England, nails passed as currency, just as they might do to-day among the Indians.

S. M. L., Belleville.—Wm. Emerson, of 456 First st., Williamsburgh, builds canoes on the Shadow model. They cost in the neighborhood of \$100, according to style of fittings. They weigh about 70lbs. complete. The double-bladed peddle is superior to the single on account of the readiness with which it can be used on either side of the canoe. For work in narrow rivers and under overhanging brush, the single blade is the better. Consult Stonehenge and Rabcock's "Gazetteer" about dog breaking.

F. Newark, N. J.—Will you prescribe for my setter dog 2½ years old? His coat is rough, flanks drawn in slightly, breathing labored after short run with coughing, good appetite. I kept him in stable until late I have him out of doors. When coughing a frothy matter comes up. Ans. Probably has bronchitis. Keep him quiet on light diet. Open his bowels with castor oil, then give him 2 grs. of quinine twice a day.

J. K., Half Day, Lake Co., Ill.—1. Will a fine shooting double-barrelled muzzle-loader lose any of its shooting qualities if I get it altered to a breech-loader? 2. What will it cost to get it altered? 3. What game can be found in Pawnee Co., Nebraska? 4. What bore of shot-gun do you recommend for general shooting? Ans. 1. Not in the least. 2. \$75. Send it to Clark & Snyder, Baltimore. 3. Quail, grouse, ducks, geese, etc. 4. For general game, deer included, a 10 bore; for winged game only, a 12 bore.

C. E. L., St. Paul.—For cruising in water likely to be rough a Shadow canoe is the best type, but will hold only one person unless made longer than the usual fourteen feet. The only canoe that will hold two is of the Herald type, built at Peterborough, Canada, but we cannot recommend them as cruising craft, being more suitable for hunting and river service. Knibston builds good canoes of all kinds. See his card in this paper, and write to him. See answer to "S. M. L." Write to Peck & Snyder, 123 Nassau st., for the latest work on rowing and training. That by Brickwood is, in our opinion, the best.

C. T. S., Philadelphia.—Can you inform me who builds the guns sold by Messrs. Read & Sons, of Boston, marked on rib and lock-plate, "Geo. Henry, London?" I have one I gave \$60 for, and it shoots as well as some guns made by prominent makers, and the finish is good. Ans. The guns you inquire about are made by Scott & Son, and no better medium-priced breech-loaders are in the market. They range from \$50 to \$65, and the Messrs. Read & Sons have struck a great demand for them. It is the custom with makers to stamp certain grades below their finest with different names to designate them, as is done with watches, etc.

J. B. B., Atlanta.—1. Have a gun marked Manton, a breech-loader. Is it a gun made by that maker? 2. What is the proper charge of powder (Orange Ducking) for a 12 bore No. 6 shot? 3. Is choke-boring a decided advantage? 4. What is the best preparation for cleaning brass shells? 5. Is Dittmar as strong as black powder? Ans. 1. Manton died years ago. Your gun never was made by him. Could not tell who made it. Might be a good gun all the same. 2. 8 drs. of powder, 1½ oz. shot. 3. Yes. 4. Oxalic acid, a weak solution, excellent. Wash well in water afterwards, with a little soda. 5. Quite as strong. (See this week's paper.)

W., Utica.—1. Is an aquarium with an iron bottom injurious to fish? 2. How should fish be cared for that are kept in an iron aquarium? 3. How should the bottom be pecked, and what with? 4. What is the best food for fish kept in an aquarium? How often should they be fed? Ans. 1. An iron bottom is apt to make the water oily, and is injurious to fish. 2. A cement bottom may be put over the iron. 3. Use fine sand and gravel. 4. According to the kind of fish. For gold fish, a fly or two and small bits of worms. Feed rarely, not more than once a day. The best aquaria are those which have aquatic plants in them. Then the equilibrium is kept up.

M. A. B., Baltimore.—1. Please inform me what is the name of the inclosed insect, as I have never seen its like before? 2. My Winchester rifle goes off in throwing out the old shell and putting in the new. If it did not go off just as it reached hole in the barrel would make it dangerous to handle. What is the cause of it? Ans. 1. The insect belongs to a species fairly known. It drops its eggs in the larva of wood-boring insects, and thus hatches its young. 2. The dring-pin, or snapper, must be flon so as not to draw back even with the face o breech-pin base. Clean the breech-pin thoroughly. If reloads shells are used, seat the primer well down, below head of shell.

C. P. B.—I have an extra heavy 40.70 barrel on my Maynard rifle, 28 inches long and a little top-heavy, for off-hand shooting, though very accurate when rested on a tree. Would you advise me to have two inches taken off the muzzle, or to have the same weight of metal taken off by tapering the barrel from breech to muzzle? Would the operation of tapering be likely to bend or spring the barrel, or in any manner injure its shooting qualities? Are pin, or aperture sights the best for off-hand shooting? Ans. Would rather advise you to have two inches cut off than to have the rifle tapered. The pin side in the one most in use for off-hand work.

BIRD LIME.—Several inquirers are requested to cut out and paste in their hats this receipt for making bird lime: Roll down linseed oil of the best quality until it becomes thick and glutinous. Roll in earthen pot, in open air, for two or three hours, and be sure that the cover of the pot fits tightly, so that the oil will not catch fire. When boiled, set away in tin vessels with tight-fitting covers. To use it: Select small,

dry sticks, as thick as a straw and eight inches long. Sharpen the edges, smear them with the lime, and fasten the sticks into grooves cut in a stake stuck into the ground. Place a "call bird" as a lure. When the birds alight upon the sticks they pull them out from the main stake, and when flying, the wings, coming in contact with the lime, are plucked to the sides.

TWIST AND GROOVE, St. Louis.—1. What twist in figures would be best for a 40 calibre with 70 grains powder? 2. Do you know of a better combination? 3. Do you think 40 cal. with 50 grains, 300 grain ball, Remington, will give a flatter trajectory? 4. Also for a Maynard. 5. Do you know anything about the — rifle? Ans. 1. One turn in every 13 inches. 2. If you do not wish to shoot beyond 300 yards 50 grains of powder is better than 70 in a 40 cal. 44 cal. for from 300 to 600 yards, 70 grains of powder should be used. 3. Yes, either will give satisfaction. See advertisements. 4. Could only be determined by experiment. With present riding a 300 grain bullet would do well for hunting. 5. Very good gun, but just in the market. Not fully tried yet. Intended for a strictly military arm, we believe.

W. E. V., Dayton, O.—What is the comparative value of the — and — breech-loading guns—all laminated steel barrels? 2. What is "laminated steel Damascus?" Is it better than others for barrels? 3. In the spring which moves the breech placed to the left of the barrels on finer guns? 4. Please state the best mode to adopt to be able to shoot without wincing? Ans. 1. Respectfully declined. We make no distinction between guns. 2. Laminated steel is one thing, Damascus another. The former means a barrel made of a compound of iron and steel, carefully worked, Damascus means wires of metal plated and twisted, then re-rolled and worked into a barrel. 3. No criterion as to position, whether fine gun or not. 4. An idiosyncrasy hard to cure. A hammerless gun would prevent your quailing.

THE INSECT.—We have unfortunately mislaid the address of a correspondent who sent us a very curious insect. The insect appears to have no English name. It belongs to the genus *Rhyssa* and is perhaps the species *Rhyssa atrata*. It belongs to the family of the Ichneumonidae which have the very ugly habit of boring into the bodies of caterpillars, in which they deposit their eggs and upon which the young feed in their larval state. You will find the whole story in Packard's "Guide to the Study of Insects" pp. 193-6. The one sent belongs to the largest of the family. These fellows amuse themselves by dying around the trees where wood-eating insects are roaring their families and punching their eggs down the holes into the bodies of the hapless grubs in their wooden coils. An English cousin of this insect is said to bore through solid wood with their ovipositors.

E. O. A., Pataskala, O.—To blue a barrel is a very nice work, and requires great skill. We give the receipt as follows, though it is better to send the barrel to a gunsmith to be lined: Tinct. of muriate of iron, one oz.; nitric ether, one oz.; sulphate of copper, four scruples; rain water, one pint. After thoroughly cleansing gun with soap and water, and having securely plugged up each end, cover it with slaked lime. When this coating is dry remove it with an iron scratch wire brush. Then apply a coat of the above fluid with a rag, and let it remain 24 hours, when a rust will have appeared. Immerse barrels in boiling hot water, and scrub thoroughly with scrub brush. Repeat this immersion until the color suits, which will be after two or three applications. Let barrels remain in lime water a short time after operation is completed.

G. N. J., Beaufort, N. C.—Paper sent as requested. Your query as to measurement of yachts would require a whole volume to fully answer. The following rules, however, are customary. Some clubs measure boats "over all," others on the "water line," and others take the mean of measurement "over all," or "on top," as you put it, and of that on "water line." The Nahaset Y. C. follows the most equitable rule, and takes length on water line, plus one-third the overhang measurement "on top." Would advise you to adopt a similar rule. Water line measurement must be taken on the normal line of notation. For the best time table write to Com. Kiley, 7 Spring Lane, Boston, for a copy of Herreshoff's tables. Cannot give figures here, as they vary for different sizes and distances. Hard and fast rules, giving one constant figure, no matter how long the course, are deceptive.

J. H., Boston.—For an engine of 5 H. P. (effective or actual, not nominal) a launch of the following dimensions is suitable: Length, 33 ft.; beam, 5ft. 8in.; draft, 2ft.; will seat about 8 persons. For 7 H. P. (effective): Length, 30ft.; beam, 6ft.; draft 2ft. 6in.; will seat about 14 persons. Screws: diam., 26in. and 28in.; and pitch, 36in. and 38in., respectively. Cannot give more accurate information without knowing size of cylinder and number of revolutions, so as to obtain actual H. P., developed and to adapt the pitch and consequent number of turns to the supply of steam. Better consult with a builder in your neighborhood. For plans of launches write to N. Y. Safety Steam Power Co., 80 Courtland st., N. Y.; or to Baird, Huston & Co., Beach and Vienna sts., Philadelphia—and mention our name. Price will be nominal. For addresses of loco-motive builders write to Neafie & Levy, Penn Works, Beach and Palmer sts., Philadelphia.

W. R. K., Lebanon, O.—No.—8 iron will make a good boat for your purpose, but will not be so readily worked as wood, unless you are an adept in handling iron. Would recommend light bar and angle-iron framing, otherwise make the wooden frame a little heavier than mentioned in our paper. When painted, the iron will readily stand salt water, but will occasionally require a fresh coat. A liquid compass is one filled with a transparent liquid, to prevent the needle flying about and vibrating, as it would in a small boat, rendering it useless. The liquid ceases the needle and card (of metal) to revolve slowly and steadily. They are universally used at sea nowadays. No American work on yacht sailing is in existence, and English yachts differ very much from our own. Vanderdecken's "Yacht Sailing" (his small book) is a good one, and will teach you the principles of sailing, though more in detail than you may need. Send to Van Nostrand, 27 Murray st., for it; price about \$3. A more expensive, but more valuable and useful work is that of Dixon Kemp, just published, but not yet received in America; price about \$9. Nothing like experience, however, in sailing a small boat. Send to Merrill's Sons, 179 Water st., N. Y., for list of charts, and select from them. A cat-boat is easier to handle by a single man than a sloop. Not much difference as to safety. Having cut off the bottom at water line, D, would prefer giving less dead rise by dropping the bilge a little lower. An 8ft. centreboard is ample. For sail, 440 sq. ft. is sufficient. Have two line of reef points in it. What ballast you carry to bring the boat down to her lines, should be well secured to the bottom to prevent shifting in a squall. Step the mast right in the "eyes" of the boat, and make the mast-step and deck frame strong; then she will need no shrouds or stays. Length of cabin (16ft.) is all right, but do not like a turtle back, on account of liability of slipping off when going forward. Leave ample gangway room on the sides. Subscription for six months to paper is \$2, post paid. No charges, but if you build send full account.

COCA ELIXIR AND DR. CARVER.—The only stimulant used by Dr. Carver, during his hard work of breaking 5,500 glass balls, was to take an occasional draft of Coca Elixir, which a careful friend had insisted on furnishing him. This well-known specific, used by the Indians of Peru, is capable of keeping up human energy for an indefinite period without any bad effects.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

(POST OFFICE BOX 2332.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 18, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

Western Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, July 19.—Quincy, Mass., Yacht Club Championship Regatta. Ennis-Guyon six days' walk, at Buffalo. Trotting: Plainville, Conn.; Toledo, O.

Saturday, July 20.—Nahasset, Mass., Yacht Club Open Regatta, at Nahant. Rutherford Park Open Amateur Regatta. Ennis-Guyon race completed. Running Meeting at Saratoga.

Monday, July 22.—Running Meeting as above.

Tuesday, July 23.—Trotting at Gettysburg, Pa., and Cleveland, O., Running Meeting as above.

Wednesday, July 24.—Trotting as above. Running Meeting as above.

Thursday, July 25.—Hendon-Ross rowing match on the Kennebecasis. Trotting as above. Running Meeting as above.

AQUATIC COBBLERISMS.—The "Shoes" toed the mark at Henley and buckled down well to their work. They might have walked over the course, but there was not enough bottom in awl of them to last. When Nadeau pegged out, their slipper-y chances, as a slangy alle-gator would aver, were sewed up, and the crew was waxed. An Oxford-tie would have necessitated a ruhher to determine the sole winning k-heel. But what hoots it?

DOCTOR CARVER.—Dr. Carver's eyes are much better. The right eye is the most inflamed. He is able to distinguish objects more clearly. Physically he is quite as well as ever, and but for his eyes says that the day after the match he could have repeated the feat. The oculist who is treating him thinks he will be all right in a few days.

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of or more, \$3 per annum.

GARDENING AS A RECREATION.

OF all occupations in the world gardening is the one which best combines repose and activity. It is rest-in-work, or work-in-rest. It is not idleness; it is not stagnation, and yet it is perfect quietude. Like all things mortal, it has its failures and its disappointments, and there are some things hard to understand. But it is never without its rewards. And, perhaps, if there were nothing but successful cultivation, the aggregate enjoyment would be less. It is all the better for the occasional shadows that come over the scene, and the discipline is most salutary; it tries one's patience, and it tries one's faith. Even in the worst of seasons, there is far more to reward and encourage than to dishearten and disappoint; there is no day of the year without something to afford tranquil pleasure to the cultivator of flowers, something on which the mind may rest with profit and delight. If there is no new surprise, no fresh discovery, there is always something to be done. "The garden is a constant source of amusement to us both," wrote Dr. Arnold in one of his delightful letters—he was writing of himself and wife—"there are always some little alterations to be made, some spot where an additional shrub or two would be ornamental, some plant coming into blossom, so that I can always delight to go round and see how things are going on." In the spring and summer there is some pleasure—giving change visible every morning, something to excite or fulfill expectation. And even in the winter flower-culture has its delights. If you have a greenhouse or conservatory, no matter how small, you have an in-door garden, in which you may watch some changes, and enjoy the same delights. In parlor or in tenement, with rich or poor, there are few states of life in which floriculture is not an available enjoyment, and in many cases a positive blessing—it is equally accessible to all. "As gardening," it was observed by Sir William Temple, who has had a new lease of life in one of the best of Macaulay's "Essays," "has been the inclination of kings and the choice of philosophers, so it has been the common favorite of public and private men, a pleasure of the greatest, and the care of the meanest, and, indeed, an employment and possession for which no man is too high or too low."

QUIBBLING TO SAVE THEMSELVES.

Upon learning of Mr. Lee's victory over Mr. Edwards Moss at Henley, and the manner in which the prize was taken by the latter gentleman upon a technicality, fair enough in its way, but not very conclusive as to his superiority, the Triton Club of Newark sent the American amateur the following by cable:

NEWARK, July 9, 1878.
GEORGE W. LEE, care *Ellis's Life*, London, England:—
We wish you to row in the Metropolitan regatta. Will you enter?
TRITON BOAT CLUB.

To this an answer was received on the 15th inst.:

LONDON, July 15, 1878.
TRITON BOAT CLUB, Newark, N. J.:—
They will not let me enter. They are afraid of me. LEE.

The telegrams explain themselves. Mr. Lee evidently has made application to row and permit him a chance to retrieve his mistake at Henley as well as to test his ability to claim the amateur championship by pulling against the two best scullers of Great Britain. This application has been denied. Evidently, for a time at least, our cousins' ardor to meet Americans has been cooled. Lee has been barred out; he is too much for them, and must return home with such satisfaction as he can win from a knowledge that British oarsmen must resort to quibbling to save themselves from defeat.

TO OUR CORRESPONDENTS.

The late William Cullen Bryant had a whole list of words which belonged to the *Codex Expurgatorius* of the *Evening Post*. We do not wish to be purists, but if there is a word we dispise, and which Richard Grant White gets into a fit over, it is that word *Donate*. Though you may find it in Webster it is not English. "Mr. Spriggins donated a barrel of dog biscuit to the Oshkosh dog show." How much easier it is to say, "Spriggins gave, or presented, a barrel of dog biscuit." One string of words, correspondents love to write, is to call a man "Whole-souled"—"The genial." Sometimes it is Noggins, who keeps the little grocery, who is "the whole-souled and genial Noggins." Now, Noggins may be really a very good and decent kind of a person and all that he is represented, but yet not he "whole-souled and genial." We invariably run our pen through "the whole-souled and genial fellows," believing that they will pass down to futurity in the columns of the FOREST AND STREAM and ROD AND GUN without these high-sounding yet empty titles. Years ago we tried to kill "speckled beauties," meaning trout, but "speckled beauties" refused to be stamped out. The "genial and whole-souled Noggins who caught the speckled beauties." We can scotch as to the first part, but not as to the fish. Custom demands it now. Mr. Blackford, famous for his trout shows, once showed us forty-five newspaper reports of his May trout exhibition from all parts of the country, and forty-three of the papers had for a head line "Speckled Beauties!"

Another combination of words is the True Sportsman. "Noggins, that whole-souled and genial fellow, that true sportsman," makes us hate Noggins worse and worse. The less high-sounding words you use the better. Paschal once wrote a not very long article, and excused himself by saying, "I had no time to be shorter." We are the recipients of a

vast amount of correspondence, which we are delighted to give space to in our columns. We are only too glad to acknowledge our indebtedness to our contributors. Still, sometimes it is hard to find the grain of wheat in the cart load of husk. A very intelligent person catches three trout, and sometimes a story is sent us about three fingerlings quite as long as if three elephants had been stalked through jungles and finally slaughtered. It may be very amusing to the author, but it is wearisome to the editor, and, if he prints it, horesome to the readers. We do exercise a good deal of judgment in making up this paper, and with regret are forced to exclude many really good articles, as far as the facts they contain go, because they are bundled up and smothered in verbiage. In this warm weather, then, tell your stories briefly, good friends, if you please.

THE LASSO IN FULTON STREET.—Seated in our chair, deeply absorbed in constructing an editorial (the office being quiet for the nonce), we heard a stealthy tread. We were too busy even to cast an eye on the intruder, and away ran the pen over the paper. Then we heard a little *splash* in the air, and something darted out like a long white snake and enveloped us. It was so quietly, so neatly done, that we were half unconscious of what it was. Perhaps, after all, we were dozing, for it was so warm. Presently we felt the chair move quietly, and we were forthwith yauked into the middle of the room. Somebody had lassoed us. Whether we were indebted for this favor to Dr. Carver or to Mr. John Omahondru we are not quite certain. Both of these gentlemen looked as innocent as lambs. The lasso was round the chair, but no one had the other end of the lasso in hand. We were assured by both these gentlemen that when a lasso has been long in service that it made loops of its own accord, and as that particular lasso—though it had caught in its wild career many a hufalo, broncho and steer—never yet had caught that strange hybrid a quill-driver; so accordingly the lasso, of its own volition, unassisted by human hands, had leaped out and entangled us. Just then the FOREST AND STREAM and ROD AND GUN Errand Boy, a very important personage, indeed, and dignified withal, having incautiously crossed the floor, was caught up by the right leg as he lifted that member from the floor, and the pile of copy he had in his hand was scattered. Mr. Omahondru offered to throw that lasso at the pen which stuck in the editorial inkstand; but we declined to see this *tour de force*. "It's the neatest thing in the world," said Texas Jack; "you don't use force, only kuack." Saying this, the publisher of the paper had in a trice the lasso thrown over his head. But the publisher of this journal knows a trick or two. So seizing the lasso where the iron ring is attached to it, he held that fast so that it couldn't be tightened on him. "You are up to the trick," cried Dr. Carver. "Some one must have shown you that. Just get a good grip on the ring end of the lasso, and it can't be made taut on you. This lasso is made of buffalo hide and is light and supple, but will hold all creation. On the plains we don't call it a lasso, only a rope; you never hear lasso. Now Jack and I will go on the landing of the stairs here, and as there are crowds of people coming up to the office all the time we will have lots of fun for the next half hour roping them. It's so hot that people might be obliged to us for helping them up." We positively declined this general offer of assistance. "Well," said Mr. Omahondru, "suppose you let us stand at the office window. There is that fat woman with a basket of bananas. I can hitch up her basket here in three seconds, and the old woman to boot, if you say so. It would be a mighty good help if I threw the rope round the neck of that poor old horse that is straining at those bob-tail cars that go round that street there." Again we had to decline this philanthropic offer. "We never saw such an unaccommodating set of people as you are," cried out both Dr. Carver and Texas Jack in a single breath, apparently quite disappointed; "are there not chaps that loaf round a newspaper office—fellows that hore you?" asked Dr. Carver; "there never was such a chance. Just you spot them for me, and we will give them the least bit of a eboke in the world."

MIDSUMMER JAUNTS OUT WEST.

BY THE EDITOR.

JAUNT THE FIRST.

LOUISVILLE, Ky., July 3, 1878.

BROTHER EDITORS: Last year you know I made my vacation rambles during the waning summer and early autumn. The adventure was a sort of *reconnaissance* of the most desirable fish and game resorts of the three States of Michigan, Wisconsin and Minnesota. It proved so attractive in all respects, as set forth in my letters to FOREST AND STREAM, that I determined this year to revisit at least a portion of the territory then covered at a season when angling was at its best. I felt almost guilty to leave you in the heat of the first torrid term, to navigate our craft in stress of weather, while I threw off the burdens and the responsibilities; but I find that the same fervent sun which scorches you in New York, glows in duplicated fervor here. Therefore, I pray you take such comfort as may be evolved from the companionship of misery; make frequent visits to the ocean surf; and be as happy as you can. For myself, I shall go north at once and leave the chances of to-morrow to those who pin their faith and fortunes on horseflesh. I have staked no money on the great event [Molly McCarty vs. Ten Broeck, July 4th], and it is too hot to stay without pecuniary inducement. Even the remonstrances of many friends cannot detain me here. They

have been more than kind, albeit the warmth of their friendship is tempered by mint juleps. The only coldness between us rests on ice.

What a host of sportsmen are congregated here this week! There are more brethren of the angle and trigger than I ever saw before at one time,—more Southern sportsmen than one would suppose could have survived the distress of the past two decades. Among them the *FOREST AND STREAM* has a large and loving constituency; and I am convinced that a return of prosperous times is all that is necessary to quadruple the circulation of that paper in the South. The Louisville Oun Club, of which J. V. Cowling, Jr., is President, and W. J. Watkins Secretary, comprises a hundred good men and true who are always ready to book their record at the trap or elsewhere. I am indebted to many of its members for courtesies, and especially to Mr. Cowling and his big brother, the Doctor, (there are three brothers of them, who average six feet two inches in height,) who is editor of the *Louisville Medical News*; to Horace Scott, Esq., of the Louisville and Indianapolis Railroad; and to M. Lewis Clarke, Jr., President of the Louisville Jocky Club. The race course, a short distance from town, is one of the finest in the country and occupies a most picturesque location. It is easily reached by carriage and horse cars. The Club has a refectory on the grounds for the exclusive use of members, and all the appointments are of the best order. Outside of Jerome Park I have never seen gathered together at a race such a respectable company of gentlemen and ladies as here. So conspicuously absent are all the objectionable features of a course that Moody could pitch his tabernacle on the infield without misgivings, and the most pious circuit-rider of the Methodists measure paces with the jockeys, in the same delightful harmony which will prompt the millennial lamb to hobnob with the lion. I wonder now why I have not visited Kentucky before. Her beautiful "blue-grass" waves such a welcome that it has become a synonym for hospitality and social interchanges. Her deep-cut streams flow through rolling lands of bucolic beauty, penetrating to far-off Edenal retreats which that simple child of Nature, Daniel Boone, loved so much. On a thousand hills the choicest herds are gathered, and the blood of Berkshire, Southdown, Jersey and Mambrino fills their veins. Baronial demesnes, with grand old homesteads and huge modern granaries, diversify the landscape, while the click of the harvester and the hum of the thresher make musical the ingathering of luscious crops. Underlying this upper realm are innumerable subterranean lakes, and an independent fluvial system whose pulsations and circulating flow are sometimes felt in the land above, manifested by mysterious ebbs and unaccountable recessions of waters long deemed stable or immutable. Eyeless fish swim in their depths, and sable gondoliers glide like wraiths along arched corridors and covered channels, whose echoes are more sensitive to whispers than the Venetian Bridge of Sighs. Great grottoes extend for miles and miles, from whose lofty roofs weeping stalactites hang, like the drapery of mausoleums; and the tears of pre-Adamite mourners which drop to the floor, congeal into pavements, to be trod by the present living. New mammoth caves are discovered before one half the labyrinths of the old have been investigated; and if we could only remove the tellurian crust we should find the revelations of our subterranean world not less startling than those we are taught to look for heaven-ward, in the coming days.

Hospitality spreads itself all over Kentucky like an unction. The dairies are wreathed with golden smiles, and the glory of shining tins surrounds each farm-house with a halo. The tide of milk and honey is always at the flood. The low of kine is moo-sio to the wayfarer, nor will the baa-carols of the sheep debar the visitor from wishing to come again.

Because this fair and teeming State was untrodden ground to me I made a wide detour to visit it at this unseasonable season. Besides, my usual routes to the West had become a familiar story. The passes of the Alleghany by the Pennsylvania Central, as well as the highways by the seaboard and lake shore, were like the romances of the masters, not less void of interest by reason of frequent perusal, but to be enhanced by comparison with others. I do not like beaten paths of travel. Any place revisited is doubly attractive, but the senses will tire of repetitions in time, and I often wonder that summer saunterers who make no haste, do not more frequently vary their routes than they do, and thus dispel that ennui which accompanies stated rounds of aestivation and makes "pleasure" a misnomer. My choice this time was by the Old Dominion Steamship Line from New York to Richmond, and thence by the Chesapeake and Ohio Railroad, across the parallel ranges of the Blue Ridge and Alleghany, to the pastoral banks of the Ohio River. What a shifting panorama of most varied beauty lies along this route! What comfort attends the passage by the sea, in comparison with the dusty tour by rail! I was surprised to hear that the heaviest travel by this steamship line was during the months of July and August, showing that the luxuries of pure air, an excellent table, and cool refreshing slumber, are appreciated at least by those who have learned to come this way. The journey is by no means tedious or monotonous. For instance, we cast off from the pier at three o'clock p. m. on Saturday. Our state rooms have been engaged two days previously, and with prompt attendants at the ship to secure baggage checks and care for small parcels, one goes aboard as little illustrated as need be, and quietly contemplates the wharf-tenders who cast off the hawsers and let the big craft glide into the stream. Then follows the panorama

of the busy harbor, the guarded Narrows, the shifting lower harbor, Sandy Hook and the receding Highlands. By twilight we are fairly at sea and running close to shore, for the ocean is as placid as a lake and the voyage is like a yacht cruise all the way. Ten thousand lights gleam from the caravansaries and cottages at Long Branch, and we can hear faintly the sounds of music which the west wind wafts from the Ocean House. Evening and morning follow, and I can fairly make out with my glass familiar places along the Maryland and Virginia shore, which successively come in view. I have one of friend Waldstein's best marine glasses, and as I sweep the line of the Sinepuxent beach where Ocean City stands, I can fancy that I see the hotel and the little shooting-box on the point near by, where I have been quartered by invitation of its proprietor, the Hon. Stephen Taber, on my goose and duck shooting expeditions in the fall. Further on is the Chincoteague Light-house, which flanks Chincoteague Bay and the outlying island, twenty-five miles in length, famous for its snipe and woodcock shooting. Outside is the Five Fathom Light-ship, at which we toss a sealed packet of papers for the case-hardened sailors to pick up and peruse in the leisure hours of their lonely watch. Our course is parallel with that tongue of land cut off from the domain of Maryland, which comprises the Virginia counties of Accomac and Northampton. Its extremity is Cape Charles, which, with its *à-vis* Cape Henry, are the flanking outposts of the Chesapeake Bay. We are passing some of the finest and least visited sporting grounds of the seaboard, and can distinctly distinguish Hog Island, Cobbs Island and Mockhorn Island, localities which initiated sportsmen have visited for years in a quiet way, haggling more snipe, woodcock and ducks in a week than their less fortunate or less venturesome friends can do elsewhere in a season. In summer there is the best kind of sheep-head, perch and rock (striped bass) fishing, and on the mainland are quail, plover and rabbits. Nowadays easy access is had by way of the Old Dominion steamers to Lewes, Del., and thence by rail, or by all rail via Wilmington, Salisbury, etc. The country is vastly more picturesque and accessible than the Currituck region, and the promise of good returns is more positive. One of these days sportsmen will wake up to a realizing sense of the fact. If they do not, it will not be the fault of the writer, or of the *FOREST AND STREAM*—the telephone which repeats his utterances from far-off places. I make it my business to investigate for my constituency, and although the exploration is a pleasure to me, I am conscious that my efforts are saving them much time, money, and many hard knocks.

Crossing the mouth of the Bay, we reach Norfolk by three o'clock p. m. (twenty-four hours after leaving New York), and while the vessel is discharging and receiving freight have ample time to visit the ancient city and the Navy Yard at Portsmouth. Meanwhile we have passed Fortress Monroe, Old Point Comfort, the Rip Raps, and Craney Island, the scene of the first iron-clad combat. When the gaslights begin to gleam in the city, the vessel gets under way and heads for the mouth of the James River. Richmond is 160 miles distant. In the interval taken for sleep, the tourist misses little which is worth seeing, for the banks of the river are low and uninteresting, and its bed flows with a liquid of a coffee-like color, caused by the washings of the red clay soil. One should be on deck at daylight. For the next four hours, until the destination is reached, at nine o'clock, the scenery well rewards the sight-seer. The tourist who is willing to devote three days or more to Richmond will be well repaid. It is the most beautiful of Southern cities.

If one wishes to travel the entire route of the Chesapeake and Ohio Railroad by daylight, he should take the morning train and proceed no farther than the White Sulphur Springs. Two nights and one day at the Springs will suffice. Between this place and Kanawha Falls, a distance of 105 miles, the mountain region is brimful of romance to the lover of scenery, and of every satisfaction to the angler. The best points for trout fishing are at Quinnmont, Hawk's Nest and Kanawha Falls. At the latter place are also large bass, wall-eyed-pike and white perch. The hotel accommodations are good, and the fishing places quite accessible.

If eastern tourists have not yet selected their route for summer travel, they will do well to take this one for a change.

I will defer a description of this mountain region for my second letter. The materials at hand would exhaust the space of three letters.

HALLOO.

JAUNT THE SECOND.

ROBERT'S REST, Neenah, Wis., July 10.

DEAR BRETHREN: How we can overcome distance and space in these modern times! It was actually more of a task to reach the Wisconsin wilderness forty years ago than it now is to compass the globe. I dated my first letter at Louisville, July 3. In twenty-four hours afterward I was set down here, at a point 400 miles due north. I move faster than my pen can follow. The record of my trip is hardly begun; and to do justice to the attractions by the way I must pick up my back trail at Richmond, while I sit here at Neenah in the cool shade which rests on the banks of beautiful Winnebago Lake. The heated term is past and the air is cooled by repeated showers. Grass and foliage gleam with a vivid green.

It was hot in Richmond, but the summer sun had not yet sored the garniture of spring. The dark-leaved magnolias were magnificent in the full glory of their bloom. Roses filled the gardens and terraces with their perfume. Bright hues of parti-colored flowers contrasted with the fresh verdure of variegated shrubbery and closely-cropped lawn. Overarching

trees embraced its aristocratic streets. Next to Washington, I am inclined to vote Richmond the most beautiful city of the Union. Its natural features make it so. Behold its seven hills; the extended sweep of their undulating lines; the majestic flow of the winding James, broken by wooded islets and foaming rapids; the far-reaching expanse of bottom-lands, and the lines of out-lying timber which trace the tributary streams! Art and the necessities of commerce have laid upon these an improving hand, adding new charms and utilizing the whole. Out of the welling bosom of the constant river they have led a canal which follows its sinuous bank in a deep and quiet flow for many miles; and having performed its offices of turning many mills and factories, and floating out freights from the interior mines and fields, is returned again to the river below, to swell the volume of water which bears large vessels to the sea. Long bridges cross the rapids in numerous dizzy spans; high bluffs make the river panorama picturesque; park, and open square, and race-course diversify the settled town; streets which were once hid in ashes are now flanked with solid ranges of substantial stores; imposing structures crown each separate hill; and from the rounded crest of Capitol Square, where the bronzed heroes of Virginia stretch forth their honored hands, the stately old legislative hall lifts up its Corinthian columns and overlooks the whole. Nothing can be more agreeable than a morning or evening drive through the streets and suburbs of Richmond after one has lauded from the ocean steamer. The traveler by rail arrives from a long journey wearied and disinclined; but the contrast of enjoyment is enhanced by the rest of a sea voyage and the bracing whiffs from the salted sea. And this is why I have recommended the summer traveler toward the West to take the Old Dominion Steamers from New York to Richmond and the Chesapeake and Ohio railroad from thence to the Ohio River. This is why I chose this route myself.

Of course I saw the boys at Richmond. We sportsmen always speak of each other as "the boys." No masonry or secret order is bound by such golden links as the fraternity of sportsmen. We are social, ardent, considerate, liberal minded, sympathetic, benevolent. We bear each other's burdens, share each other's joys, respect each other's confidences, defend each other's good name, exchange photographs, and divide our last biscuit and ammunition. Sometimes we shoot over borrowed dogs; and herein, let me whisper, lies the only danger of breaking the *entente cordiale*. If the borrower is not prepared to concede at the outset that his friend's pointer is the staunchest dog he ever saw; that he will draw on game, drop to shot, retrieve better and work up the out field quicker and more thoroughly than any other dog; then let him not borrow. The only way to cement a link so broken is to pass the flask, acquit the dog, and declare that your own stupidity was the fault. I saw good dogs in Richmond and good guns. It is gratifying to note the increase of the little luxuries and conveniences of a sportsman's outfit at the South since the war. At the close, only the negroes enjoyed the privilege of carrying guns; now clubs of genuine sportsmen are multiplying throughout the land. At first, Virginia was slow to move, but she has since organized a most efficient State Association, with an energetic president (Chas. A. Palmer, Esq., of Richmond,) and numerous subordinate and independent clubs, devoted to the protection and propagation of game and fish, and incidentally to the taking thereof at the proper seasons. The Old Dominion is rapidly assuming a front place, and will very soon be foremost as a conservator of the species. She is attending strictly to business, and taboos all pigeon-popping at sessions and deliberative conventions as wholly irrelevant and out of place. I think we can all learn wisdom from the Mother of States. The result of her missionary work, especially among the mountains, is most gratifying, impelling from the lawless a few of combined organization, if not a respect for the law itself. Common sense is taking the place of hereditary heresies, and fish and game are consequently increasing in quantity. The press is an earnest coadjutor and disseminator of information. The venerable editors of the *Richmond Whig* and *Richmond Dispatch*, Messrs. Cowardin and Mosely, are foremost in the good work. I was honored by marked courtesies from these gentlemen, and by Messrs. Ott, Palmer, and other prominent conservators of game. Mr. Macdonald, who has succeeded Col. Mosely as Fish Commissioner, is a most competent and well-informed officer, whose services are much valued. Socially, Richmond is wholesome and unaffected. Her open hand is extended, and the worthy may consider themselves honored by its grasp. I passed one pleasant afternoon at the 200 yard range of the Rifle Club. It is located by the James River, below the city. A few of the members drove out to give me an opportunity to inspect the grounds. We fired a few rounds at the Creedmoor and Wimbledon targets, for practice, the best scores falling to Messrs. J. W. Jenkins, Chas. P. Stokes and Wm. Euker, the latter making 48 out of a possible 50 points. (He chuckled us.) The Richmond Rifle Club has a goodly membership and a fair attendance at the range on practice days. Altogether, Richmond is a most desirable place to visit, and in the fall the sportsman will be sure to fill his bag from the neighboring marshes, fields and river bottoms. Should he wish larger game than quail, ducks and snipe, the Chesapeake and Ohio railroad is at hand to convey him to the Blue Ridge Mountains, where he will find deer, bears and turkeys in abundance, to say nothing of cats, opossums and raccoons.

If the summer tourist has time to examine the scenery along the entire line of this romantic thoroughfare, he will do well to take the morning train at Richmond, which will drop him at the White Sulphur Springs by supper time. The next day

[illegible][illegible]

Newburg.—The winner of the 2d of July match was Mr. A. Smart.

CREEDMOOR—*Saturday, July 13.*—A new departure was made at Creedmoor, shooting having been tried at 1,100 and 1,200 yards. Common long-range targets were used, with the three-feet bull's-eyes, which at the extreme distances looked like dots. The match was under the auspices of the Amateur Rifle Club. We give the best scores in full:

1,100.....5 2 5 4 8 6 3 2 4 4 5 8 5 5 8-63
1,200.....4 0 0 2 5 R 4 4 4 4 5 2 3 8-40-104

CONLIN'S SHOOTING GALLERY.—The "man" target is another novelty lately introduced in the gallery by Mr. Conlin. It is evident by the large proportion of practice at these targets that this new pattern takes among the short-range marksmen, affording as it does a new and difficult mark. It is just the thing for popularity. A marksman is always trying to find a mark a little more difficult than the last one. The target is entirely black, having the shape of the head and body of a man (so Mr. Conlin states, but it really recalls the form of a demijohn), being similar to the German "man" target which was such a favorite among all grades of marksmen during the late Schuetzenfest at Union Hill. The gallery "man" target is divided by very fine white lines, running perpendicularly, dividing the form in strips one-eighth of an inch wide, which are numbered from 1 to 20, the first strip on each side of the "man" counting 1, and the strip running through the centre counting 20. In the centre of the body there is an inch bull's-eye divided in rings, numbering from 1 to 25. To make a 25, it is necessary to cut the centre of bull's-eye out. The highest possible total in a score of ten shots would be 250. It can be easily understood how difficult it is for the shooter to find the centre of the dead black target. Notwithstanding this, some remarkable shooting has been already done. The following are some of the best scores of ten shots with rifle, 100 feet:

W Sibley.....	231	E T Davis.....	184

NATIONAL RIFLE ASSOCIATION.—The National Rifle Association held a special meeting on Thursday. A letter was read from the widow of the late Gen. Dakin expressing her thanks to the association, and to the several organizations which have reported to that body, for their sympathy in her bereavement. On motion of Major Fulton, the chairman was authorized to appoint a committee of three, having Gen. B. Woodward as chairman, to complete the necessary arrangements for compiling the programme of the autumn meeting at Creedmoor. The committee was instructed to confer with the Prize Committee and to report to the Executive Committee. A resolution was adopted requiring competitors for places on the American team of 1878 to shoot in their two concluding competitions at Creedmoor. The other conditions were similar to those governing the selection of teams in former years. Col. Sanford was instructed to confer with the Prize Committee and Executive Officer with the view of determining the feasibility of having an individual long-range military match at Creedmoor next fall. The board then took up the case of Gen. F. F. Millen, and on motion was restored to the privileges of membership in the association. An adjournment was then taken.

BISMARCK'S DOG.—It is given to some dogs, especially if they mix much in politics, to acquire a world-wide notoriety. This lean black dog which follows Prince Bismarck around, and among other peculiar traits manifests a deadly antipathy to French poodles, and always howls when he sees an English newspaper, has again come into public notice by this escapade:

Since the attempt upon the emperor's life by Nobiling, the nervousness under which Bismarck has long been suffering has violently increased. The prince, when thus suffering, controls his temper with difficulty. He stamps his foot and gesticulates excitedly when in discussion. Something of this kind occurred during the interview with Prince Gortschakoff, and the dog, mistaking the eagerness of his master for anger, sprang suddenly at the throat of the Russian diplomatist. Happily Bismarck was as quick as the dog, and had seized and thrown him aside before he had fastened his teeth in the person of Gortschakoff. Among certain classes in Berlin this unpleasant incident is spoken of as an omen. The dog's instinct did not deceive him, they say. Prince Gortschakoff is plotting mischief against the chancellor, and the dog saw it in his eyes.

FROG BUTTER.—A Middletown (Conn.) man put a pail of milk into a spring of water near the house to cool. Two hours thereafter, upon going to the spring for his milk, he was surprised to find, instead of milk, a large roll of butter, surmounted by an enormous bull-frog. His frogship had jumped from the water in the pail, and in endeavoring to extricate himself from the milk by the action of his legs, had turned this rich and creamy milk into butter.

This offers a new industry for the toiling millions. Let some enterprising dairyman start a frog pond, train his frogs to churn, and teach them to crow when the butter comes.

—The people of the coast of Labrador are represented to be in a dreadful plight. The fisheries failed last fall, and the traders, who usually barter supplies with them for fish and oil, consequently have withdrawn from that region. Nothing of consequence will grow there, and some families have died of starvation.

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.,** of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

UNION SQUARE, NEW YORK

Don't Catch Weeds and Logs, BUT CATCH FISH.

Brush's Patent Float Trolling Spoons entirely overcome the defects heretofore found in all other spoons—viz., running too deep as to catch weeds and logs, and below where the fish see them. Made of the best material. Bass size, 75 cents; pickerel, \$1; muskallunge, \$1.25. Each by mail—25 cents extra for gold-plated. Address, **HENRY C. BRUSH, Brighton, Franklin Co., New York,** may 9 '97

APOLLINARIS NATURAL Mineral Water.

HIGHLY EFFERVESCENT.

APPROVED by the Académie de Médecine of France, and its sale in France authorized by special order of the French Government.

Recommended by the highest Medical Authorities in New York as

"A great relief for seasickness."
"A delightful beverage."
"Far superior to Vichy, Seltzer, or any other."
"Most grateful and refreshing."
"Absolutely pure and wholesome; superior to all for daily use; free from all the objections urged against Croton and artificially aerated waters."
"Impregnated only with its own gas."
"Useful and very agreeable."
"Healthful and well suited for Dyspepsia and cases of acute disease."
"Mildly astringent; agrees well with dyspeptics, and where there is a gastric diathesis."
"By far the most agreeable, alone or mixed with wine, useful in Catarrhs of Stomach or Bladder, and in Gout."
"Not only a luxury, but a necessity."
To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and wholesale of

The Sportsman's Library OF STANDARD BOOKS. JUST ISSUED.

This Compilation Contains Brief Descriptions of Over One Hundred and Fifty Books Upon Outdoor Sports and Amusements, Together with Between Eighty and Ninety Spirited Illustrations of Game Birds, Fish, Horses, etc., Many of them Drawn from Life.

A most valuable compilation which should be in the hands of every sportsman, every one who wishes to acquire the art of shooting or to obtain information regarding game, birds, fish, horses, guns, equipments, etc. The trouble hitherto has been, the people have not known what works were issued on field sports and pastimes, or where they could be procured.—N. P. Stanton, Pres. National Rifle Association.

All interested in outdoor amusements will be gratified with this publication. To know the contents of the book mentioned will fit any man for the better employment of his time, and if the knowledge be gained in this way is practically employed, better health and longer life will be the result.—Henry Fulton, Captain American Team 1876.

FACTS For Schools—recommended by State Super of 35 different States and by 50 College Presidents, about 32 000 have been placed in Public Schools by law or by School Officers. Contains 3,000 Illustrations, nearly three times as many as in any other Dictionary. The best FAMILY help in training children to become intelligent men and women. The best FACTS in 20 times as great as that of any other series of Dictionaries. Published by **G. & C. MERRIAM,** Springfield, Mass. Jy 1897

AM. NAT. HISTORY SERIES

A new series of Monographs On different subjects in Natural History Is announced under the above title. The series is intended to supply the felt want of brief, popular, yet thoroughly reliable Hand Books of Natural Science.

The initial volume, on **SPIDERS, THEIR STRUCTURES AND HABITS.**

By J. H. Emerson, fully illustrated, is now ready, and will be mailed, postpaid, on receipt of \$1.50.

Vol. II, on **FERNS IN THEIR HOMES AND OURS.** Illustrated with colored plates, will soon be ready, and will be mailed for \$1.50.

BODD, MEAD & CO., 751 Broadway, N. Y.

JUST OUT!

NEWLY REVISED EDITION (THE SIXTH) OF **WALLACE'S DESCRIPTIVE**

Guide to the Adirondacks.

The only Complete and Reliable Guide to the delightful Fishing and Hunting Grounds of the Great New York Wilderness. Gives all possible information relative to Routes, Hotels, Resorts, On-lites, Guides, Distances, etc., with amended railway schedules, etc. Handsome 12mo. Flexible Covers, Red and Gold, Maps, etc. Beautifully illustrated. Over 300 Pages. Price \$2.

TESTIMONIALS:

The instructions embrace everything that can be desired. Taking it all in all it is the most complete book that has been published on the Adirondacks, not excepting even my own.—Hon J. T. Headley.

I regard your "Descriptive Guide" and the "Appendix" as a most useful, nay indispensable, manual for tourists to that wonderful Wilderness. A tour in that region is eminently a practical matter, and for that reason I regard your "Guide" as an important, useful and timely publication.—Benson J. Lossing.

It is the only thing of the kind that has yet been published—the very thing that has been so long wanted and waited for.—Alfred H. Street, Author of "Wooda and Waters."

Sent by mail on receipt of price, \$2, by **WAVERLY PUBLISHING CO.,** Syracuse, N. Y.

Sole Proprietors and Manufacturers of

Orange Lightning Powder.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers especially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 3 1/2 lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs. and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

BLASTING POWDER and ELECTRICAL BLASTING APPARATUS. MILITARY POWDER of all kinds on hand and made to order.

Safety Fuse, Frictional and Platinum Fuses.

pamphlets, showing sizes of the grain by wood cut, sent free on application to the above address.

English Sporting Gunpowder.

CURTIS & HARVEY'S

DIAMOND GRAIN.

No. 2, 3, 4, 5, 6, 7 and 8. Superior Rifle, Enfield Rifle, and Col. Hawker's Ducking. W. STITT, 31 Cedar street, N. Y. Agent for the United States.

Gunpowder.

THE HAZARD POWDER CO. MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for mazzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office. 65 WALL STREET, NEW YORK.

Painting.

PAINTING.

EVERY ONE THEIR OWN PAINTER.

50 Per Cent. Saved.

We are manufacturing a very fine Pure Ready-mixed Paint, mixed in such a manner that any ordinary staidle or farm hand can make as good a job painting as a painter can with paint mixed in the old way. This is because our paint does not set quick, and thus shows marks of the brush. We sell it lower than materials can be bought in the ordinary way, and pay freight on certain sized orders.

Any one wishing to Paint, will have mailed free, upon application, our book—"How Every One can Paint and Select Harmonious Colors." Address INGERSOLL PAINT WORKS, South and Dover streets, New York.

Medicinal.

BRANDRETH'S PILLS.

We believe these celebrated pills are pre-ordained by their inherent merits to be the medicine of the world. They impart a power by which every organ of the body becomes healthy. Nature has formed the bowels so that they are capable of drawing to them the impurity of any organ of the body, however distant. So we have little more to do when we are sick than to purge freely with a medicine time has proved will not hurt. This treatment always quickly restores the health when adopted in time.

BRANDRETH'S PILLS

cure both constiveness and diarrhoea. Ask the man who was dying from constipated bowels what cured him; he tells you Brandreth's Pills. Ask him who had dysentery for months what cured him; he says Brandreth's Pills. They are the best medicine for Small Pox, and they prevent any marks. A case occurred recently where Brandreth's Pills cured a deep ulcer of the foot, which the doctors said could only be removed by amputation; yet twenty-five boxes cured it and restored the patient's health. Reference, W. M. Skinner, of White Plains.

Brandreth's Pills are not a quick medicine, but a scientific preparation, which have been prepared by the present proprietor for over fifty years. They are wholly composed of innocent herbs and vegetable essences, are incapable of hurting the most delicate, yet sure to cleanse the bowels and blood and exert a curative effect upon every form of disease. Where for twenty years the patient had no movement of the bowels without medicine or mechanical means, a month's use of Brandreth's Pills cured, restoring the bowels to regularity.

The secret of reuniting the vital principle is discovered in this medicine; it generates and increases healthy animal warmth. Provided the great organs are not irreparably injured, there is no disease Brandreth's Pills will not cure. Remember, they concentrate the vitality of the system to eject the disease wherever located in the body.

BRANDRETH'S PILLS

are sold by all dealers—25 cents a box, either sugar-coated or plain—and at Dr. Brandreth's

TROUT FISHING!

The Wisconsin Central Railroad

THROUGH TO

LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland
 and return for \$20 are sold at 63 Clark street, or the
 C. M. and St. Paul, Madison Street Depot, Chicago;
 also at low rates from Milwaukee. Dogs, guns and
 camp equipment taken free.

The points of attraction to sportsmen on this
 "Forest and Stream" route are Menasha and Green
 Bay for bass fishing; Butternut Creek and Lake for
 muskellunge; the many branches and lakes of the
 Flambeau and Chippewa which teem with bass, pike
 and pickerel; never till last season fished by sports-
 men. Between Silver Creek and Ashland all are
 trout streams, and many others can be easily reached
 along the shore from Ashland or Bayfield, while
 rock fishing for speckled trout and trolling in the
 Bay affords excellent sport.

The Chequamegon hotel at Ashland, built last
 year, has been enlarged, and is supplied with a
 steam-yacht, sail and rowboats and excellent guides.
 The atmosphere at Ashland is a sure preventive of
 hay fever.

Steamers from Ashland to all Lake Ports,
 Send for Guide Book.

"THE FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
of Northern Michigan,

VIA THE

Grand Rapids & Indiana RR

(Mackinaw, Grand Rapids & Cincinnati Short Line.)
 Sportsmen who have cast a fly, or trolled a spoon
 in the

Grand Traverse Region

will come again without solicitation. All other lovers
 of the Rod are invited to try these waters, wherein
 the fish named above, as also Muscalonge, Pike and
 Pickerel abound.

In no other streams east of the Rocky Mountains
 is the famous **AMERICAN GRAYLING** found in
 such numbers.

BROOK TROUT Season opens May 1.
GRAYLING Season opens June 1.
 The Sportsman can readily send trophies of his
 skill to his friends or "Club" at home, as ice for
 packing fish can be had at any point.

TAKE YOUR FAMILY WITH YOU. The scenery
 of the North Woods and Lakes is very beautiful.
 The air is pure, dry and bracing. The climate is
 peculiarly beneficial to those suffering with

Hay Fever and Asthma.

The hotel accommodations are good, far surpass-
 ing the average in countries new enough to afford
 the finest of fishing.

On and after June 1 Round Trip Excursion Tickets
 sold to Points in Grand Traverse Region, and attrac-
 tive train facilities offered to tourists and sportsmen;
 also Mackinaw and Lake Superior Excursion Tickets,
 Dogs, Guns and Fishing Tackle Carried Free, at
 owner's risk.

Camp Cars for fishing parties and families at low
 rates.

It is our aim to make sportsmen feel "at home"
 on this route. For Tourist's Guide, containing full
 information as to Hotels, Boats, Guides, etc., and
 accurate maps of the fishing grounds, send to

Railway.

QUICKEST, CHEAPEST AND BEST!

TWO PASSENGER TRAINS EACH WAY DAILY,
 between Burlington, Albert Lea and Minneapolis,
 crossing and connecting with all East and West
 Lines in Iowa, running through some of the finest
 hunting grounds in the Northwest for Geese, Ducks,
 Pinnated and Ruffed Grouse and Quail. Sportsmen
 and their dogs taken good care of. Reduced rates
 on parties of ten or more upon application to General
 Ticket Office, Cedar Rapids. C. J. IVES,
 E. F. WINSLOW, Gen. Passenger Agent,
 General Manager.

LONG ISLAND RAILROAD, MAY, 27, 1878.
 Ferryboats leave New York from James Slip
 (daily except Sundays) 30 minutes, and from Thirty-
 fourth street, East River (daily) 15 minutes previous
 to departure of trains, and from South Wall street,
 Fulton and Catharine ferries (daily) 30 minutes pre-
 vious to departure of trains from Depot, corner Flat-
 hash and Atlantic avenues, Brooklyn. Trains leave
 Brooklyn and Long Island City (Hunters Point) as
 follows: For Greenport, Sag Harbor, etc., 8:30 A. M.,
 4 P. M., and on Saturdays at 3:30 P. M. For Patch-
 ogue, etc., 9:30 A. M., 4:30 and 6 P. M. For Babylon,
 etc., at 9:30 A. M., 4:30, 5 and 6 P. M. For Port
 Jefferson, etc., at 10 A. M. and 4:30 P. M. For North-
 port, etc., at 10 A. M., 3:30, 4:30 and 6:30 P. M. For
 Locust Valley, at 8:30 and 10:00 A. M., 3:30, 4:30,
 5:30 and 6:30 P. M. For Far Rockaway, etc., at 9:30 A. M.,
 4:30, 5, 6 and 7 P. M. For Garden City and Hemp-
 stead, 8:30 and 10 A. M., 3:30, 4:30, 5:30, 6:30 P. M., and
 12:15 night, and from Long Island City only 9:30 A. M.,
 1:30 and 6:30 P. M. **SUNDAYS**—For Port Jefferson,
 Patchogue, etc., 9 A. M., Babylon, etc., 6 and 7 P. M.

FOR NEW HAVEN, HARTFORD, SPRINGFIELD
 White Mountains, Montreal and intermediate
 points. The new and elegant steamer Continental
 leaves Pier No. 25, East River, daily (Sundays ex-
 cepted) at 3. A passenger train will be in waiting
 on the wharf at New Haven and leave for Spring-
 field and way stations on arrival of boat.

NIGHT LINE—The Elm City leaves New York at
 11 P. M., connecting with passenger train in waiting
 on wharf at New Haven, leaving 5:15 A. M. Tickets
 sold and baggage checked at 841 Broadway, New
 York, and 4 Court street, Brooklyn. Excursion to
 New Haven and return, \$1.50. Apply at General
 Office, on the pier, or to **RICHARD PECK, General**
Agent.

THE SPORTSMAN'S ROUTE.
Chicago & Northwestern R.R.

Embraces under one management the Great Trunk
 Railway Lines of the West and Northwest, and with
 its numerous branches and connections, form-
 ing the shortest and quickest route between Chicago and all
 points in Illinois, Wisconsin, Northern Michigan,
 Minnesota, Iowa, Nebraska, California, and the
 Western Territories. Its **OMAHA AND OALI-**
POLINA LINE is the shortest and best route for all
 points in Northern Illinois, Iowa, Dakota, Nebraska,
 Wyoming, Colorado, Utah, Nevada, California, Ore-
 gon, China, Japan and Australia. Its **CHICAGO,**
ST. PAUL AND MINNEAPOLIS LINE is the short
 route for Northern Wisconsin and Minnesota, and for
 Madison, St. Paul, Minneapolis, Duluth and all points
 in the Great Northwest. Its **WINONA AND ST.**
PETER LINE is the only route for Winona, Roches-
 ter, Owatonna, Mankato, St. Peter, New Ulm and
 all points in Southern and Central Minnesota. Its
GREEN BAY AND MANQUETTE LINE is the only
 line for Janesville, Watertown, Fond du Lac, Os-
 coda, Appleton, Green Bay, Escanaba, Negannee,
 Marquette, Houghton, Hancock and the Lake Superi-
 or country. Its **FREESPORT AND DUBUQUE**
LINE is the only route for Elgin, Rockford, Free-
 port and all points via Freeport. Its **CHICAGO**
AND MILWAUKEE LINE is the old Lake Shore
 route, and is the only one passing through Evanston,
 Lake Forest, Highland Park, Waukegan, Racine,
 Kenosha to Milwaukee. **PULLMAN HOTEL CARS**
 are now running regularly between Chicago and
 Council Bluffs, on the California Express Train of
 the **CHICAGO & NORTHWESTERN RAILWAY.**
 West bound, they leave Chicago daily, except Sun-
 day (and on every third Sunday), from the Wells
 Street Depot, at 10:50 A. M., and arrive at Council
 Bluffs next morning.

East bound they leave Council Bluffs at 6:30 P. M.,
 daily, except Saturday (and on every third Saturday),
 and reach Chicago next afternoon.

No other road west of Chicago runs Pullman
 or any other form of Hotel cars.

TO SPORTSMEN.
 This line presents peculiar advantages. For
 Prairie Chickens, Ducks, Geese and Brant shooting,
 our Iowa line to-day offers more favorable points
 than any other road in the country, while for Deer
 and Bear hunting, and for Brook Trout, Lake
 Salmon, Pike, Pickerel and Bass fishing, a hundred
 points in the Northern and Northwestern lines of
 this company will be found unsurpassed by anything
 in the West.

New York office, No. 415 Broadway; Boston office,
 No. 5 State street.

PAINE'S FEATHER-FILLED GLASS BALL

PRAIRIE FIRES NEVER SPREAD FASTER

THAN THE SALE OF THIS BEAUTIFUL AND POPULAR BALL.

NOTICE TO SPORTSMEN.

Through an unavoidable accident we have been prevented from filling our very numerous orders for the two last weeks, we now take this opportunity of informing the public in general and the (Dealers in particular) that we are fully prepared to meet and fill all orders for the

PAINE PATENTED FEATHER-FILLED BALL

and will hold in stock in future sufficient to fill all orders, as we have increased our facilities so much that we are prepared to make, 50,000 per day if needed. **BROKE** was the word said 5,500 times by the referee in the Great Match between **DR. CARVER** and time, the **PAINE FILLED BALL** was used in preference to all other. As to the merit of the ball we need hardly call your attention since every prominent shot including the most marvelous of all marksmen, the king of the rifle,

DR. CARVER,

has used them in preference to all others.

No better criticism could be given the ball than the gratuitous praise bestowed upon it by the press of the entire country since its production

PAINE'S PATENTED FEATHER-FILLED BALL

is the ball of the future as well as of the present.

We will from this day commence to fill all back orders, and any others that may come will receive prompt attention

Every Ball made to scale, and no imperfections. **\$1,000** Reward to any one who can find a single ball in ten thousand beyond the maximum weight (two ounces). No thick sides or bottoms. Its uniformity of thickness won it favor from the first, and out of the immense number sold we have never had one complaint.

NO CLOSE DECISIONS.—A Feather-filled Ball once struck by shot, and the tale is told. *It satisfies every one on the instant, and saves all unpleasant work for Referees.*

NO SHORT COUNT.—Every barrel is warranted to contain enough over three hundred to allow for reasonable breakage. Will also contain copies of the Standard Rules for Glass Ball Shooting, for one, two, or three traps.

For sale by all Dealers in Sporting Goods throughout the World.

FLYING TARGET.

(Patented August 7, 1877, No. 193,579.)

The way it came to pass was this: I to a sporting club belong; I love to shoot; I love to see the long-hill topping to the copse from whence 'twas flushed, or in its whirling flight the goodly grouse come dauttering to the ground, and hence to make myself proficient in the manly sport, I joined the club, and practiced at the gyro, glass ball, and the living bird, and as a substitute therefor the CHEAPEST and the BEST, the Flying Target, I've contrived. For information, if you wish, or for a trap, address
E. M. LEAVITT, Auburn, Me.

Volume 10.—No. 25.
No. 111 Fulton St., N. Y.

FORTY, LESS ONE.

A FORM FOR THE YOUNGEST READERS.

OVER by the tangled thicket,
Where the level meets the hill,
Where the mealy alder-bushes
Crowd around the ruined mill,
Where the thrushes whistle early,
Where the midges love to play,
Where the nettles, tall and stinging,
Guard the vine obstructed way,
Where the tired brooklet lingers
In a quiet little pool,
Mistress Salmo Fontinalis
Keeps a very private school.

Forty little speckled beauties
Come to learn of her, each day,
How to climb the foaming rapids,
Where the fishing sunbeams play,—
How to navigate the eddies,
How to sink and how to rise,
How to watch for passing perils,
How to leap for passing flies,—
When to play upon the surface,
When beneath the stones to hide,—
All the secrets of the water,
All brook learning, true and tried;—

"That's a good-for-nothing skipper;"
"That's a harmless yellow-bird;"
"That's a flicker of the sunshine,
When the alder-leaves are stirred;"
"That's the shadow of a cloudlet;"
"That's a squirrel come to drink;"
"That—look out for him, my darlings!—
He's a fierce and hungry mink;"
"That's the ripple on the water,
When the winds the wavelets stir;"
"That—snap quick, my little hearties!—
That's a lascivious grasshopper."

So the clever Mistress Salmo
Gives her counsel, day by day,—
Teaching all the troutly virtues,
All life's lessons, grave and gay.
Well she knows the flashing terror
Of King Fisher's sudden fall!
Well she knows the lurking danger
Of the barb'd hook, keen and small!
Well she tries to warn her pupils
Of all evils, low and high!
But, alas! the vain young triflers
Sometimes disobey—and die!

What was that which passed so quickly,
With a slender shade behind?
What is that which stirs the alders
When no ripple tells of wind?
What aends Mistress Salmo's darling
Underneath the stones in fear?—
Crying, "Hide yourselves, my darlings!
Our worst enemy is near!"
"I am bound to understand it,"
Says one self-proud speckle-side;
"When I see the danger's real,
Then, if need be, I can hide."

So he waits alone and watches,
Sees the shadow pass again,
Sees a fly drop on the water,—
Dashes at it, might and main.
"Missed it! Well," he says, "I never!
That's the worst jump made to-day!
Here another comes—now for it!"
Splash! He's in the air—to stay!

When the sliders cease to tremble,
Silence comes and sun-glints shine,
Mistress Salmo Fontinalis
Calls the roll, just thirty-nine!

—JAMES RICHARDSON, St. Nicholas for July.

CANOERINO.—The graphic account of a canoeing trip down the Housatonic, written by Mr. W. L. Alden, well-known as one of the founders of the *Shadow* type, will be read with interest by the canoeing fraternity throughout the country, and will prove equally acceptable to yachtsmen and sportsmen in general. We hope that this and similar descriptions of the pleasures of canoeing may attract general attention to the pastime. There are scores of rivers in this country offering rare attractions for those who are able and willing to paddle their own canoe. The Golden Age of the paddle in America has long ago passed away with the dusky *voyageurs* of the wilderness. For the sake of the great army of land-workers, who are annually seeking rest and recreation, let us have faith to believe that there may some day come a Silver Age.

The Sneak of the Plains.

For Forest and Stream and Rod and Gun.

THE prairie wolf, or coyote of the plains, is a genius in his way, and as a strategist is worthy of mention. It is well known that he is a sneak-thief, and that he and his fellows hunt in packs and pursue to the death wounded buffaloes, deer, antelopes and other animals that get left in the race for life. It is a curious sight, if you can obtain it by stealthily "rising" a divide, to see a pack at the carcass of a buffalo or deer, pulling at the hide and flesh, snapping at each other, hunting among the remains for choice bits, licking their chops when sated, finally leaving the well-picked bones to the ravens and scattering for a lazy siesta in the nooks of some arroyo. It often occurs that wounded animals, aged or otherwise disabled, are not to be found, and then the coyote has to resort to strategy to capture a dinner.

The great hare of the West, *Lepus callotis*, called the jack rabbit, is, perhaps, as odd a specimen of the rodents as there is to be found. He is twice the size of his congeners in other parts of the country, has ears like a donkey, and speed in running that is simply immense. Going at his best he looks somewhat like a yacht tacking against a high wind, his long ears waving with a jerky lateral motion, which seems to affect the body even to the extent of nearly capsizing the craft. And yet under ordinary circumstances he will always keep ahead of his pursuer, dog or wolf, and at last fade out like a shadow on the ground. The jack rabbit spends a good deal of his leisure time under the shady side of a yucca or soapweed, sleeping with one eye open and ever on the alert for his enemies. But the coyote gets out of meat, and then plans are made that generally insure success. To facilitate matters and secure a fair return, two coyotes will start out together in a sly way, sneaking away, and ere long get up a rabbit. One then goes for the game and keeps it moving pretty lively on a line that forms a circle, coming back near the place of starting. Here the first squats on his haunches while the other continues the pursuit, though a sharp eye is kept on the periphery of the circle by the hunter at rest, lest a capture is made to his disadvantage. In a few rounds the rabbit turns over his personal effects, and the subsequent proceedings frequently terminate in a row between the parties engaged. The undulating slopes of the plains furnish excellent opportunities for seeing a long distance, and the practiced eye readily determines the number of yards or rods away an object may be.

Once while hunting grouse I caught sight of a coyote ranging somewhat like a pointer on a piece of level land nearly a half mile distant. The movements were not as regular as a trained dog's would be, but he would travel back and forth, apparently across the line of scent (if he was so guided) his general course being toward some low bushes on the bank of a dry creek. At the point of turning in these cross movements he would crouch in the grass and lie quiet for a few moments, then rise stealthily and travel briskly with his nose to the ground. Being on the windward side of him, in the midst of a cluster of small choke-cherry trees, and on higher ground, I could, unobserved, see all that was going on. The sight was novel and peculiarly interesting, and my great hope was that nothing would occur to interrupt the proceeding or change the wild hunter in his enterprise.

Suddenly, when near the first of the little bushes, the wolf dropped low in the grass and crawled slowly, stopping at times, and then going on with a cat-like movement and the greatest caution. This continued until the prowler was within a few feet of the bush, when there was a spring, a gray flash that was hardly distinguishable, and a half dozen grouse rose panic-stricken, in the air, cackling wildly, giving the general alarm, and flying, it seemed, with more than the usual steadiness and grotesque wabbling motion. But one of their number was left a sacrifice, in testimony of the prowess and sagacity of the champion sneak of his species.

While completing an outfit preparatory to a trip into the mountains beyond Platte Canyon, in Colorado, it became necessary one day to go and find a Texas mare I had purchased, a famous antelope chaser, and capture her either with a lariat tied like a lasso, or by running her down, first "cutting her out" of a band of ponies, the stock of a neighbor ranchman, with which she was staying.

The *vagueros* employed at the ranches are thoroughly posted in this cutting out business, and capture a pony in a very few minutes, and with little trouble. The lasso is generally thrown around the pony's neck, and then he is quickly choked into submission.

I was accompanied on this expedition by George —, the ranchman himself, lariat in hand, mounted on a large horse, while I rode a favorite broncho. After an hour's search, tra-

velling together, and failing to find the band we were after, we determined to separate, taking a wider range, but keeping within sight. George was followed by Bruno, the rancho dog, of well-known prowess and courage, and Ponto, the pointer, was attached, as usual, to me. When we were perhaps a mile apart, I noticed George on the summit of a divide making sundry and frantic signs and gesticulations, which meant that I should come over there, and I concluded that he had found the horses in the little valley beyond. Getting near enough to hear his voice, I could distinguish the words—

"A wolf! let's go for him!"

And away he went pell-mell at a break-neck speed down the gentle slope of the hill. When I reached the top of the divide I could see the coyote a mile away, and the ranchero after him, going like the wind.

The chaso had begun in earnest, and Ponto and his master at once joined in, eager for the fray. The coyote was at first apparently not certain whether he was the object of this strange proceeding or not; but dogs and horses were gaining on him, and there was soon no alternative but to go, and to get in his work as rapidly as possible. The tables, for once, were turned. Heretofore he had been the pursuer, the sly observer of opportunities to waylay unoffending jack rabbits and unsuspecting birds. Now he had a chance to know how it was himself, to realize what it is to be pursued by an avenging Nemesis, by those who regarded him as a criminal, and would exult in his capture and death. Away he went, like a hound unleashed, knowing at last it was a struggle for life.

In ten minutes the dogs were up with him, and we struck the spurs in deep, cheering them on by our shouting, wheeling, charging and driving, trying to get the wolf at bay and give the dogs a chance to "snatch him bald-headed," as George vigorously described it. To our astonishment, however, the rancho dog stopped when the wolf did; refused to tackle him, and turned away in apparent disgust. Ponto wanted to attack, but was afraid of the ugly teeth snapping at him, and the coyote, taking advantage of the singular turn affairs had taken, struck out again, and boldly, for freedom.

We were too near a capture to give it up so, and again urged the dogs to a renewal of the contest. In the meantime the coyote rose a little divide near by, and disappeared into one of his dens, and we thought the fellow had outwitted us at last. An examination of the premises, however, revealed the fact that he was not far in, and Bruno, as if to re-instate himself in our good graces, offered to go in and pull him out. And in he went. Then there was a fight inside, a horrible medley of snarling and growling and snapping, when suddenly the dog came out dragging the wolf after him. In the meantime I had alighted and obtained a board, as a weapon, from a claim shanty near by, and was determined to help the dogs some way. In the light again, Bruno let go his bold and would have nothing more to do with his distant relative. But the unsophisticated parties present, Ponto and his owner, pitched in—first, one giving him a "belt" with the board and the other a bite, until, finally, George got the lariat over the wolf's head and reduced him to perfect quietude, a condition from which he would never more rise to organize a partnership and gather rabbits on shares.

Hunting ducks one day I found myself after two hours' sport in the vicinity of Bear Creek canyon, a locality rich in attractive scenery, and, though a comparatively wild place, indented here and there by the hand-prints of brave and energetic men. Just as the pony was struggling out of a deep ravine, I saw a coyote start up a short distance off, and strike out at a lively pace for the rolling prairie that stretched away to the south. He was a full-grown individual of the genus *Canis*, an artful dodger, no doubt, and I determined to give him a chase. Six ducks on the horn of the saddle, and gun in one hand, were bothersome impediments; but the pony was agreeable, and a touch of the spur started him off beautifully.

After going three or four hundred yards, the coyote, still a good distance ahead, stopped to reconnoitre, pointing his nose rearward over his back, and seemed to ask himself the question—"Is it a matter admitting of no doubt that that party is after me?" And he doubtless came to the conclusion he was, as the flight was renewed and he skipped away with surprising energy. The pony was equal to the emergency, however, and knew excellently well how to thread his way among cactuses, and leap over intervening breaks and dog-holes. The distance between pursued and pursuer was gradually lessening, and I was pretty confident of getting a shot at seventy or eighty yards, when a deep, steep-sided ravine appeared in view, reaching a long way out at right angles with a creek near, for which the wolf was making with all possible speed. Suggesting with the spur a more reckless expenditure of muscle, the pony leaned to the task with redoubled effort. The ducks loosening from the string, scattered promiscuously along in the grass, a broad-brimmed hat broke from its mooring and went sailing, and the saddle, on account of a yielding cinch, threatened to turn and throw the rider over the pony's head. Ere the coyote reached the ravine, however, the contents of both barrels were sent after him, and the last I saw of *Canis latrans* he had crossed to the opposite side, and was going at a limping pace down in the direction of Santa Fe.

These chases and skirmishes, my indulgent observer, were principally to get accustomed to hard riding, and indulged in with a relish, because it is delightful now and then to be doing your level best.

CAMP BLISS.

A TWO-WEEKS TRIP TO NOVA SCOTIA.

THERE seems to be a large class of people whose ideas in regard to Nova Scotia are extremely vague. It is classed in their minds with a number of green, red and yellow blotches on the maps of their school geographies, where nobody in particular lives, and, at the most, as only a semi-civilized region, with a coast useful to wreck vessels upon, and an interior populated largely by Indians and Esquimaux, and a few white people who stay there because they have to. Greenland, Labrador, Alaska and Nova Scotia, to these people, are all very similar in their physical and social aspects. They know that when people "go to Halifax" they go to Nova Scotia.

An opportunity occurred a few years ago for me to spend several weeks in different parts of Nova Scotia, which little experience expanded my ideas of the region in a most agreeable manner, and I should like now to awaken others to the fact that a pleasant, interesting, invigorating and economical trip can be taken there by any one who can get a two-weeks' vacation, whether he goes as an angler, sportsman, or mere pleasure tourist.

During the summer of 1876, the year following my first experience in Nova Scotia, having formed a congenial "Fishing Club," consisting of one friend and myself (in most cases a sufficient membership for such a club), we left Philadelphia about noon, one day early in July, and took one of the Sound steamers the same night in New York for Boston. Starting during intensely hot weather, as soon as we were on board the magnificent Providence we were cool and comfortable, and the pleasure of our trip began. Many persons object to going long distances in search of sport, because so much time is consumed in getting to the ground. But with such ideas much of the pleasure of life is wasted or unrecognized. The "good time coming" may generally begin the moment one gets on the cars to leave care and worry behind, and to "go somewhere." I never see a train of cars move out of a depot but I wish I were on board "going somewhere," especially somewhere that a trout lives. Having breakfasted on the boat, at Boston we were soon transferred to one of the fine boats of the International Steamship Co. (sailing tri-weekly), which was to carry us along the coast to St. John, N. B. The boat touches at Portland in the evening, and at Eastport the following morning, reaching St. John in the afternoon. If the boat is missed at Boston, owing to detention on the Sound, by going by rail to Portland it can be taken there in the evening.

Sailing out of Portland's rock-bound harbor that evening, we had a combination of thunder storm and sunset, with most magnificent sky and cloud effects, with Maine's rugged coast for a background. Mount Desert was passed during the night, and Grand Manan the next morning. During the summer months good weather can be counted on, and a thirty-six hours' sail along the coast of Maine is almost certain to be thoroughly enjoyable.

After a night spent at the Victoria Hotel in St. John (unfortunately burned last summer in the great fire), we pushed on by the Intercolonial Railway to our destination, which was the little place known as Westchester, in Cumberland County, N. S. [See Hallock's "Fishing Tourist."] Mr. E. J. Purdy, who keeps the pleasant little inn at Westchester, met us at Thompson Station by previous appointment, and after a fifteen-miles' drive we reached his home on the summit of the Cobequid Mountains, about six in the evening. Situated as Westchester is, on the top of a low range of hills about in the middle of the neck of land connecting Nova Scotia with the mainland, one gets a most deliciously cool and invigorating combination of the sea air blowing up from the Bay of Fundy, and the bracing mountain air of this, the highest point in Nova Scotia. An invalid could not breathe a more healthy compound. As for Mr. Purdy and his family, one could not have hosts more anxious to please, or more filled with the spirit of true hospitality. Mr. Purdy had carefully attended to every detail of the preparations necessary for our comfort while in camp, and early the following morning, with Mr. Henry Bliss engaged as our guide, philosopher, friend, wood-chopper, etc., we drove with our traps to Fountain Lake, six miles from Purdy's, over a rough wood road. Here we lived under canvas for about a week, christening our quarters "Camp Bliss." At any time of day we could row out on the pretty little lake and catch a good supply, often two at a time, of gamy trout, running from eight to fourteen inches in length. Two pounders are sometimes taken there. We never caught more than we needed for use, fishing an hour or so morning and evening, and between times lying off and enjoying delicious rest from the office labors of our city life. Mr. Purdy drove over frequently, and kept us well supplied with fresh eggs, milk and bread. A little previous cook-book study had made fair camp cooks of us, so that we lived far better than we had done on previous occasions when we depended entirely on the doubtful abilities of Maine guides.

Fountain Lake is small, say half a mile long, with water clear as crystal. Large spring-holes can be seen at various places, with great schools of trout lying at the bottom, and no prettier sight can an angler see than when a trout darts up from the bottom in plain view and seizes the fly, as a terrier grabs a rat, retreating again with it as far as its pliant green-heart lets him. Of course in such clear water the largest fish will not rise unless the surface is ruffled. Sometimes, toward evening, after a warm, still day, a cool wind will spring up, cooling as well as ruffling the surface, and then good sport with good-sized fish is sure to follow until even your "whits miller" cannot be seen for the darkness.

The interest in this little lake will, perhaps, be increased to some when they learn that a real hermit lives on its borders, or rather in the woods back of it. I fear, though, that he does not count his beads or indulge in pious meditations very often. Apparently he is not that kind of a hermit. But he lives all alone in a little cabin, with only his miserable "yaller dorg," Ranger, for company, subsisting mostly on trout from the lake, and working occasionally as a farm-hand to earn a little bread or salt pork. Occasionally Ranger will range a little more widely than is desirable, in search of scraps from our camp or from other causes, when presently the air will be rent with Tommy's yells, interspersed with very unhermit-like "cuss words," as he beseeches the pup to return to his home and master. Westchester Lake is another pretty sheet of water, but trout are getting scarce in it, owing to its accessibility to the workmen from the Arcadia Iron Mines, not far off. The "Jim Sutherland Pond" is a small pond containing a plenty of very gamy, dark-colored trout. I filled my creel

there once just about as fast as I could cast and land the fish. Back of this pond, in the woods, is a meadow brook, very rarely visited, and swarming with trout of small to medium size. A man named McClellan can guide one to it and to the pond.

Of the hospitality of the people of Nova Scotia I cannot speak too highly. Everywhere one is treated as a visiting friend rather than a mere stranger and traveler. The country is wild and well stocked with game and fish, from bears and moose to salmon and trout. It is easy of access, and fairly supplied with rail and stage communication between different points. Two weeks from Philadelphia or New York will give ample time for a very pleasant trip. If one can take a couple of days more, or will deduct them from the time allowed for fishing, Halifax, a very quaint and interesting town, can be visited, and the return to St. John be made by way of Windsor and Annapolis through the beautiful country made famous by the story of Evangeline, and the charming Annapolis valley, and then by steamer across the Bay of Fundy. Hotel and other charges in Nova Scotia are very moderate, but of course one cannot go to such a great distance without some expense. But the total cost need not be more than \$60 to \$90 for one person, according to whether any time is spent at first-class hotels in Boston and St. John, or whether Halifax is included in the trip. Our club decided unanimously that our trip was the pleasantest from beginning to end that we had ever taken, and Nova Scotia now means much more to us than when we only knew it on the school maps. R. S. R.

Philadelphia, April 6, 1878.

Fish Culture.

NEW ENGLAND FISH COMMISSIONERS.—The Fish Commissioners of Massachusetts, New Hampshire and Connecticut, and other gentlemen interested in the subject, visited Plymouth, N. H., Tuesday. The party consisted of Col. Theodore Lyman, Hon. Asa French, and E. A. Brackett, Esq., Commissioners for Massachusetts; Dr. William M. Hudson, of the Connecticut Commission; Samuel Webber, Luther Hayes and A. H. Powers, Commissioners for New Hampshire; Governor Prescott, ex-Governor Talbot, of Massachusetts, who was for many years a member of the Board; Hon. Charles R. Train, Attorney General of Massachusetts; Hon. Charles Endicott, State Treasurer; Hon. Edward Spaulding, of Nashua; Colonel Carter, State Treasurer of New Hampshire; Dr. Fletcher, ex-Fish Commissioner of New Hampshire; Hon. H. W. Blair, Representative to Congress from the Third District; Councilors Smith and Tuttle, of New Hampshire; James E. Kame, of St. Louis, and other gentlemen. The party inspected the new hatching house, which has a capacity for more than 600,000 salmon spawn, and possesses an excellent supply of the purest spring water. In their conference the Commissioners discussed the securing of uniform legislation in the States of New Hampshire and Massachusetts in regard to the protection of salmon.

CALIFORNIA SALMON IN LAKE ONTARIO.—The following communication will be read with interest by all those engaged in fish culture. There seems to be no doubt but that the *Salmo gairdneri* exists in Lake Ontario. In corroboration of the same we publish the following from John Robson of New Castle, Ont., under date of July 15:

You will be pleased to receive information which will satisfactorily prove the success of Mr. Wilmot's experiment of introducing California salmon, *Salmo gairdneri*, into Lake Ontario. On Saturday last, 13th inst., I caught at this place twenty-three salmon, two of which were *Salmo gairdneri*, one a grilse weighing four pounds, the other a well-grown, well-fed male fish of fourteen and one-half pounds. I compared the latter with your description given in FOREST AND STREAM, June 27, 1878, and found the engraving corresponded exactly. The dimensions were: extreme length, two feet eight and three-quarter inches; girth at pectoral fin, fifteen and a half inches; girth at dorsal fin, eighteen inches; at anal fin, fourteen and a half inches. The whole shape is different to the native salmon, *Salmo salar* being deeper and thicker according to the length. I compared it with a well-fed *Salmo salar* of the same length and which only weighed nine pounds. I at first intended to forward the fish to Professor Baird, but on reconsideration, it being Saturday, and with a probability of delay on Sunday and the thermometer at 90 deg., I was afraid to risk so valuable a specimen to the danger of spoiling before arriving in Washington, so I had my nephew, Mr. A. Farcomb, who is a good amateur taxidermist, put it up. I shall probably catch others in a few days, and if so, on any other day of the week but Saturday, will forward one to Mr. Baird at once. Mr. Wilmot is now on his annual visiting tour through the fish breeding establishments in the lower provinces; on his return I shall present the fish to him, and he can make such disposition of it as he thinks proper.

JOHN J. ROBSON.

A HALF DAY AT WALTONMERE.—Waltonmere is but a brief hour's ride from Hartford, and on the line of the Hartford, Providence and Fishkill Railroad. On invitation from the proprietor, Mr. C. R. Belden, we gathered our lines, rod and reel one sunny afternoon not long since, and purchasing a ticket to Bolton Notch, found on our arrival there a comfortable vehicle to carry us over the mountain three miles to the above locality. We finally drew up at the hatching-house, the first of a series of buildings connected with this establishment for the propagation of brook trout. By the success which has crowned Mr. Belden's efforts during the past year, we think the patron saint of the place—Sir Isaac Walton—might well be pleased could be for one instant look down upon this enterprise, just now in its infancy. The natural hesitancy of the place, under the shadows of Bolton Mountains, makes it more than usually attractive to the angler, as it takes him back in memory to many of his favorite haunts in other wilds, and entirely erases from his mind the thought that a city of 45,000 inhabitants lies within an hour's ride. A series of five ponds, supplied by the clearest of mountain brooks, produces all the necessary conditions for the successful raising of trout, while Dame Nature is further assisted by the careful attentions of the proprietor, and every hindrance speedily removed. We passed through the various departments of this enterprise, and examined the trout from half an inch in length to those of half a pound in weight, and were constantly surprised at the healthy state in which we found each growth. Although these ponds have been stocked only a year, their success seems a certainty, as over 100,000 of these fish were hatched last March and are now in their

ponds, while those of last year have attained $\frac{3}{4}$ of a pound in weight, and can be enticed by the seductive attractions of the angler. We were allowed the pleasure of casting our lines into the largest of these ponds, and soon transferred a number of the fine fish to our creel. We found a small black fly and white miller very taking, also the ever favorite brown hackle, but we failed to allure them with the gaudy yellow and red flies which we used with such killing effect down in Maine. It is the hope of Mr. Belden that by another season the trout will have increased to a sufficient size and number to permit, to a limited extent, fishing in these waters on a reasonable royalty, but to-day it is hardly practicable. T. S. S.

DESTRUCTION OF FISH BY SEA BIRDS.—From the *Fishing Gazette* we take the following. We have already alluded to the subject. California fish-culturists particularly complain of the depredations of sea fowls in the waters of that State:

"It is estimated," says the report, "that on Ailsa Craig alone there are 10,000 gannets. Assuming that each bird only take six herrings a day, the gannets on Ailsa Craig alone must consume 60,000 herrings a day, or 1,800,000 herrings a month, or 21,600,000 herrings a year. On the assumption that there are fifty gannets in the rest of Scotland for every one on Ailsa Craig, the Scotch gannets must consume more than 1,110,000,000 herrings a year, or 37 per cent. more herrings than all the Scotch fishermen catch in their nets." The total annual catch of herrings by Scotch fishermen is estimated at 800,000,000. But besides the gannets there are gulls, cormorants, auks, guillemots, puffins and many other birds which prey on the herring. In a letter to the Earl of Caithness, printed in the report of the commissioners, the following is found: "I have often reared young gannets, and found that they required, when about two months old, six or seven herrings per day to keep them in condition, and they would eat twelve or fourteen if given to them. I have often slit the old birds for information, and taken six or seven large herrings quite fresh from their stomachs. I have rarely found any other fish than herrings in them, and I know that they can get herrings in abundance every day in the year on the coast of Scotland; allowing, therefore, six herrings per day and 1,000 to the crane, this gives annually 720,560 cranes, which is considerably over the annual catch in Scotland for the past ten years. To prevent this great loss of fish it is thought wise to check the increase of the gannets. Another calculation, made by Mr. Connell, a fisherman of Girvan, gives the number of gannets off the Ayrshire coast at 20,000. 'All these birds,' he says, 'must live, and it is well known that their principal food is herrings. Allow that number of birds five herrings each per day to keep them alive, and, at the same calculation, as before stated, you will find they consume in one year the enormous quantity of 1,800,000 barrels, or one half more than all the fishermen in Scotland kill in the same time. I am only speaking,' he says, 'of the birds that frequent this one rock, Ailsa Craig, although it is well known there are many other rocks around the coasts of Scotland on which the sea fowl are quite as numerous; and I can also state with confidence that these birds are increasing very fast in number since the Act for their preservation came into force. The 324,000 gannets, therefore, estimated to breed in Scotland twenty years ago, may be fairly computed to have increased to a considerably larger number during the nine years that the Act protecting them during the breeding season has been in operation; and it would seem, therefore, that the estimate of the commissioners that there are 510,000 gannets, breeding or not, in Scotland, is little, if at all, over the mark. Under these circumstances the commissioners recommend that the Sea Birds' Protection Act, as far as it applies to Scotland, should be repealed, in order to check the increase of sea birds and the consequent destruction of valuable food."

Natural History.

Notes on the Illustrations in Don Juan Lembeze's "Birds of the Island of Cuba."

Don Juan Lembeze, a Catalonian schoolmaster, while following his avocation in the City of Havana, Island of Cuba, published, about the year 1850, his "Aves de la Isla de Cuba." This was twelve years after the ambitious work of Ramon de la Sagra had been printed in the city of Paris at the expense of the Spanish Government.

Several large volumes made up the work of De la Sagra, which treated of the general natural history of the Island of Cuba. The ornithological department of this Government enterprise was edited by the distinguished Frenchman, Mons. Aleixandre D'Orbigny. His volume, which I have before me, appears to be a sort of compilation made from poor authorities, and at the best is but a rehash of old matter. One of our young American field naturalists of to-day—an Allen, a Ridgway or a Purdie—could contribute, from a single season's observations, more original matter than is found within the covers of Mons. D'Orbigny's large volume, which contains all of what was then supposed to be known about Cuban ornithology.

The ambitious De la Sagra attempted too gigantic an enterprise for the time given him for its completion by the Spanish Government, and the work is strangely incomplete, and abounds in many errors. As this great Natural History of Cuba was too costly for any but people of wealth, but few ornithological students could possess it. Therefore, Juan Lembeze's single octavo volume, which was sold in the Havana book stores for ten dollars, was welcomed by the young Cuban naturalists, when it first made its appearance among them, and to this day it is the only hand-book on ornithology in the market. Dr. Gundlach's "lists," etc., of the birds of Cuba have not yet been published in a convenient form, but appeared as "articles" in Don Felipe Poey's natural history *Repertorio*, which is printed in the Spanish language.

Lembeze's "Birds of the Island of Cuba," therefore, may be called the only popular Cuban ornithology in existence, and as it is thus to be considered, I think it important that a proper estimate of the value of its teachings (at least as far as its illustrations are concerned) should be submitted to persons who intend to take up tropical Cuba as a field of scientific investigation. Lembeze acknowledges his adoption of the figures of birds taken from "Audubon's North American

"Ornithology" to adorn his little volume; but as he does not explain to his readers the peculiar manner in which he uses, or misuses, some of them, I cannot admire his ingenuity in the construction of one Cuban bird from two North American species, nor his apparent frankness, which allows but half the truth to be told.

I will now proceed to give a critical review of the illustrations of the above popular ornithology, comparing Lembe's figures with those in Audubon's small edition, published by George R. Lockwood.

On page 11 is plate 1, with figures 1 and 2.

Fig. 1. *Fulco peregrinus*, Linn. Vulg. Spanish. Halcon is the male *Buteo borealis*, Gmel., taken from "Audubon's Birds of America," vol. 1, plate 7—the red-tailed buzzard. Fig. 2. *Buteo borealis*, Gmel. (Vulg. Sp. Gavilancoli-rojo.) Lembe gives no description of this bird in his text. He constructed this figure from the two figures of the Peregrino falcon, *F. peregrinus*, plate 20, vol. 1. "Audubon's Birds of America," by placing the female falcon's head upon the male falcon's body. In doing this he probably studied the picturesqueness. In Audubon's plate the male falcon had pounced upon a green-winged teal, while the female was devouring a gadwal duck. Having made his one new *Buteo borealis* out of two sexes, Lembe allows this interesting bird to rest upon the gadwal duck. The whole may be called not a copy of, but a composition from, Audubon.

Plate No. 2.—Fig. 1. *Pandion haliaetus*, Sav. Vulg. Sp. Guineho. Evidently intended to be an imitation of figure in plate 15, vol. 1, "Audubon's Birds of America," but the colors are not those of the fish-hawk.

Plate No. 3.—Fig. 1. *Astur fuscus* Gmel. Vulg. Sp. Cernicabo morado. The attitude, coloring, etc., are tolerably good. Fig. 2. *Buteo latissimus*, Wils. Vulg. Sp. Halcon de Monte. This figure is taken from Audubon—vol. 1, plate 20—the broad-winged buzzard. Lembe gives this figure without alteration from the original of Audubon, but the coloring is very far from the truth. Fig. 3. *Morphnus urubitinga* (?), Cuv. Vulg. Sp. Batista. Not finding this bird in Audubon's work, the Catalonian ornithologist, not having anything better to copy, evidently took the male *Buteo lineatus* from the American ornithology to experiment upon, but failed in colors.

Plate No. 4.—Fig. 1. *Otus brachyotus*, Linn. Vulg. Sp. Caraho. This bird, as figured in Audubon, is upon a bank watching a turtle, or tortoise, on a log. Lembe puts the bird upon a leafless branch of a tree, and omits some of the "markings" on the feathers, which the original artist believed necessary for a true representation of the subject. Fig. 2. *Noctua nuidipes*, Daud. Vulg. Sp. Cotunto. I cannot find in this bird any particular resemblance to Audubon's *Cunicularia* or other owls. Let us hope that Lembe copied some of his illustrations from nature—at least give him the benefit of the doubt, since the source from whence came the original of this figure cannot be ascertained. Fig. 3. *Chordeiles virginianus*, Briss. Vulg. Sp. Berquetec. From plate 43, vol. 1 "Audubon's Birds of America." A better imitation of the original than any previous imitations.

Plate No. 5.—Fig. 1. *Vireo gundlachii*, Lemb. Vulg. Sp. Peti-Bobé. This bird was first described by Lembe, and was named in honor of Dr. Gundlach, a German naturalist, who has spent most of his life in Cuba. This figure was probably copied from the true *Vireo gundlachii*. Fig. 2. *Anabates f. rufinervis*, Lemb. Vulg. Sp. Chilla. This species, like the preceding one, was described by Lembe, and may represent the original bird. Fig. 3. *Muscicapa elizabeth*, Lemb. Vulg. Sp. Ruiseñor. Like the two preceding birds, this was described by Lembe, and may have been figured from nature.

Plate 6.—Fig. 1. *Helinaia bohemani*, Vulg. Sp. Goringera. The position and markings of Bachman's Warbler are similar to the figure in Audubon's, vol. 2, page 43, but the colors are very unlike those in the original. Fig. 2. *Sylvia discolor*, Vulg. Sp. Mariposa Galana. Copied from "Audubon's Birds of Am." Vol. 2, page 63. Position and markings of the bird approach the original in Audubon, but the colors are not similar. Fig. 3. *S. aestiva*, Vulg. Sp. Canario de manglar. A tolerable counterfeit of the yellow-poll wood warbler in "Audubon's Birds of Am." Vol. 2, page 50. Fig. 4. *Helinaia vermiculata*, Vulg. Sp. Gusano. Copied from "Audubon's Birds of Am." Vol. 2, page 86. A fair imitation in all but colors, which are much lighter than in the original.

Plate 7.—Fig. 1. *Hirundo americana*, Wils. Vulg. Sp. Golondrina Biferada. The swallows in Audubon, vol. 1, page 180, are both upon the nest, but Lembe gives his figure of the same bird soaring in the air. Fig. 2. *H. bicolor*, Vieill. Vulg. Sp. Golondrina verdosa. The author copies Audubon's figure of this species, but does not give the violet or bluish back, but substitutes a decided green not natural to the bird. Fig. 3. *H. riparia*, Linn. Vulg. Sp. Golondrina Ribariega. This sand martin is copied from Audubon, vol. 1, page 187. The coloring is but a poor imitation. Fig. 4. *Cypselus cyrdii*, Lemb. Vulg. Sp. Vencejo Cubano. Probably copied from the original bird described by Lembe.

Plate 8.—Fig. 1. *C. ludovicianus*, Linn. Vulg. Sp. De gollado. The best imitation of any bird the author has copied from Audubon. Taken from "Audubon's Birds of Am." Vol. 3, page 209. Fig. 2. *C. coruleus*, Vulg. Sp. Azulejo real. Nearly so good as the last; also copied from Audubon.

Plate 9.—Fig. 1 and 2. *Icterus Baltimore*, Linn. Vulg. Sp. Trupial. A good copy from "Audubon's Birds of Am." Vol. 4, page 37. Fig. 3. *Agelaius assimilis*, Gund. Vulg. Sp. Chirriador. Here Lembe commits a sin by giving the figure of the *Agelaius phoeniceus*, Linn., an old and well-known North American bird for the Cuban species discovered by Dr. Gundlach. The figure he selects to represent the Cuban bird is taken from "Audubon's Birds of Am." Vol. 4, page 31.

Plate 10.—Fig. 1. *M. varia*, Linn. Vulg. Sp. Bijirita Trepadora. The position of the bird is altered from the one given by Audubon. Fig. 2. *O. Helena*, Gund. Vulg. Sp. Zanzuncito. This was, probably, figured from the original bird.

Plate 11.—*Ardea lentiginosa*, Swains. Vulg. Sp. Alcaraban. The two bitterns are had imitations of the American bittern, and were copied from "Audubon's Birds of Am." Vol. 6, page 94.

Plate 12.—*Ardea brunescens*, Gund. Vulg. Sp. Aquita-caiman osenro. The water scene and a house with a chimney is not a Cuban landscape. It was probably taken somewhere from Audubon. The figure of the bird may or may not have been copied from nature.

Plate 13.—Gulines of the heads of two birds. Fig. 1. *Ardea cubensis*, Gund. Vulg. Sp. Garza cubana. Fig. 2. *Hemipalmis minor*, Gund. Vulg. Sp. Sarapiquito.

Plate 14.—Fig. 1. *Hemipalmis palliatus*, Temm. Vulg.

Sp. Ostrero Americano. The author copies Audubon, Vol. 5, page 236, with the exception of the outline figure of the head and bill, which is not represented in Lembe's plate.

Plate 15.—Figs. 1 and 2. *Streptopelia interpres*, Linn. Vulg. Sp. Sarapico. From "Audubon's Birds of Am." Vol. 5, page 231. Audubon represents the two Turnstones as "No. 1. Summer plumage; No. 2. Winter plumage." Lembe copies the two birds and represents one as the male and the other as the female.

Plate 16.—*Anser hyperboreus*, Gmel. Vulg. Sp. Guanana. See "Audubon's Birds of Am." Vol. 6, page 212. Snow goose. To fully appreciate the constructive genius of Lembe one must examine Audubon's plate of the snow goose, and also that of the American swan, (Vol. 6, page 226,) for from these two birds has the artist made up the curious nondescript which the Catalonian ornithologist gives to the public as the true *Anser hyperboreus*. In Lembe's plate the snow goose the reader will recognize Audubon's American water scene with a North American water lily upon the face of the pool. The feet of the swan, more the covert and its neck are given, while the dark wing of the adult snow goose, are put upon it. The primaries of this new bird is original in character.

Plate 17.—*Anas acuta*, Linn. Vulg. Sp. Pato Pescue-silargo. A fair copy from "Audubon's Birds of Am." Vol. 6, page 266. Two ducks. Audubon's Birds of Am. Vol. 6, page 18.—P. represented. Copied from "Audubon's Birds of Am." Vol. 7, page 141. The coloring of Lembe's figure is badly done. He omits the green upon the neck of the bird.

Plate 18.—*P. Aninga*, Linn. Vulg. Sp. Marbella. Copied from "Audubon's Birds of Am." Vol. 7, page 154. The male and female snake bird is a fair copy of the figures given by Audubon.

Plate 19.—*Larus marinus*, Linn. Vulg. Sp. Gaviota demanto negro. A fair copy from "Audubon's Birds of Am." Vol. 8, page 55.

In closing this criticism of the "Birds of the Island of Cuba," its author would remark that it is impossible to support Don Juan Lembe in his observation that "the larger part of the illustrations have been faithfully copied from the work of Audubon," neither will he believe that the misuse to which many of them have been put does credit to the great American bird painter, Audubon, or his untruthful imitator, the Catalonian ornithologist.

NATHANIEL H. BISHOP.
Lake George, Warren Co., N. Y.

NEW BIRDS FROM THE WEST INDIES.—In a recent number of FOREST AND STREAM was published an account of some of the adventures of Fred Beverly, the special correspondent of this journal, who has been exploring the Island of Dominica for the Smithsonian Institution. The sufferings which Mr. Ober has undergone while engaged in the arduous task which has occupied him for two years, have been extreme, and he has proved himself a veritable martyr to science—one of that large and noble company who patiently endure all the evils which stand so thickly in the way of the explorer, and of whom the world so seldom hears. Although Mr. Ober has been shipwrecked and several times prostrated by fever he has gallantly persevered, and we are now enabled to announce some further results of his investigations.

The good work which Mr. Ober has done in collecting is appreciated by our naturalists, and in the department of ornithology his labors have been especially successful. We have before referred to a paper by Mr. Geo. N. Lawrence, describing a number of new birds sent from Santo Domingo, and we have now to call attention to another article taken from the annals of the New York Academy of Sciences, in which the same writer announces seven additional species from the Island of St. Vincent.

After completing his explorations in Dominica Mr. Ober proceeded to St. Vincent; but while there he was attacked by a fever, from which he did not entirely recover for nearly four months. Even after his restoration to health his collecting was very seriously interfered with by the almost constant rains. The collection made in St. Vincent comprises ninety specimens, representing thirty-five species, of which seven, as already remarked, are new to science. Besides the specimens forwarded to Mr. Lawrence, Mr. Ober enumerates twenty-four others which he either saw or had reported to him as undoubtedly inhabiting the island. Mr. Lawrence announces that he hopes before long to be able to give a complete catalogue of the birds of the island, together with some notes on their habits, derived from the collectors' field notes.

The new specimens here described are as follows: *Turdus nigrirostris*, *Myiadestes sibilans*, *Thryothorus musicus*, *Certhiola atrata*, *Certhiola saccharina*, *Leucophaea bishopi*, dedicated to our friend and frequent correspondent, Mr. N. H. Bishop, of Lake George, and *Calliste versicolor*.

RAPACITY OF THE BOAT-FLY.—Editor Forest and Stream:—I venture to ask you for information in regard to a strange water insect caught near our town. It was found by some boys in an old quarry filled with water and presented to my neighbor, Mr. J. S. Baker, who placed it in his aquarium to observe its habits and study its character. In a few days it showed habits of such extreme voracity and a disposition so ferocious as to attract numerous visitors. No one, however, had ever seen anything like it. The insect—for insect, fully developed and perfect, it is—is 2½ inches long by ½ wide across the back; of a dark brown or dirty black color. It has six legs, all armed with powerful claws at the extremities. The front set appear to be used to seize its prey; the second set it employs in clinging to objects (under water) when at rest, and the hind legs it uses to propel itself through the water. These are flattened and shaped much like the flippers of a crab (I send drawing). Its head is armed with a powerful, lance-like beak, which is folded back when not in use. After being in the aquarium several days, it attacked a small turtle, about the size of a silver half dollar. Springing on the back of the turtle, it seized and held it with its middle and hind legs, then grasping the turtle's head with one of its fore claws, it drew it out of the shell and forced it to one side, then inserted its beak into the carotid, sucking its blood. The turtle died in a short time. The insect, however, held

on to it for several hours, evidently feeding on its juice. A few days later a small water snake, eleven inches long, been put into the aquarium, it immediately seized it in the same manner as the turtle. A snake, having the neck. A desperate struggle ensued, by which the back of for his life, but in a few moments he was forced so far around as to dislocate the vertebrae. In this case we could not find the wound of the snake, although Mr. Baker examined the wound of the snake, and he seemed that the snake must have existed, as the insect clung to the snake and appeared to be feeding. On being forced from its dead prey it gave evidence of great rage, scolding around the aquarium and clutched savagely at a stick.

Objects in our midst, but none of them ever saw any stream like this fellow. Mr. H. C. Hill has dragged every Agassiz with thousands of specimens, and furnished the late Prof. Norris, Pa., June 26, 1878.

D. M. Yost.
The insect referred to is easily identified from the admirable sketches which accompany our correspondent's note. It is a species of *Belostomatidae*, one of the *Nepidae*, which belong to the Hemiptera, a group containing the harvest-flies, cicadas, etc. We hope that our correspondent will continue his observations and will keep us informed as to the daily life of this strange pet.

SOME REMARKS ON ALBINISM.—Bedford, O., June 16, 1878.—Albinism is not always congenital. Many years since I purchased a pair of pure black Spanish fowls, and bred from them several years. The hen, nor any of her progeny, ever showed any indications of sitting. The old hen, when about five years old, began to have white feathers, and at each moulting the white feathers were more numerous, and eventually she became entirely white—every feather and quill, legs and bill, and even her toe-nails, turned white, and her eyes a beautiful pink. At ten years of age she died on her nest. I have noticed this tendency in the black Spanish fowls in several instances.

Very truly yours,
T. GARLICK.
It should be remembered that observations of this class on domesticated animals are by no means always reliable, since, as is well known, the tendency to variation is much greater than in animals in a state of nature. Therefore, let us go slowly in this matter.

Our correspondent, "Bobolink," who writes us from Williamsport, Pa., sends a note which bears somewhat on this question. He says:

"Apropos of 'Mac's' albino chicken, described in FOREST AND STREAM AND ROD AND GUN of June 13, I know an analogous case. A neighbor raised a robin which proved at maturity to be a fine male and a good singer, colored like any ordinary cock robin. After moulting one season, when he was probably three or four years old, all his long wing and tail-feathers turned perfectly white. He lived to eat and sing several years after, and retained these partial albino characteristics. His stuffed remains are in my brother's collection."

A somewhat similar case was reported in FOREST AND STREAM not long ago, but in this instance the robin turned black instead of white.

WERE WOLF.—A startling paragraph is going the rounds of the press. Wolves, it is said a pack of them, have escaped from the Philadelphia Zoological Garden, and are ravaging the whole of Pennsylvania. Notwithstanding the heat of the season, the Russian sledge story has been repeated, and how the woman threw out her twins and her best bonnet to be devoured by the wolves. When last heard of, the wolves had attacked a train on the Stony Creek Railroad, after having stopped a farmer on the Germantown turnpike and devoured his horses and all his 75 cents-a-pound butter. Seriously alarmed, we addressed one of the directors of the Philadelphia Zoo, who has calmed down our fears, as follows:

It is the regular canard which always turns up this time of year, in place of the *cicadetta* big gooseberry which fed the reporters during the summer. We have no wolves, nor has anything escaped from the Zoo. There may be a Custer Station and also a Stony Creek Railroad, but I know them not. Last summer it was the wild-cat, and so on.

AN ALBINO DEER.—We know of a white male deer, quite tame, which can be had at a reasonable price in New Brunswick. This albino ought to be put in some of our zoological gardens.

HABITS OF THE RATTLESNAKE.

CAMP BOWIE, ARIZONA, JUNE 7, 1878.

EDITOR FOREST AND STREAM:

I was much interested by an article on the *Crotalus*, which appeared in your paper of May 9, though I consider the question, "Of what use is the rattle to its possessor?" as far from being answered as ever.

If the rattle is a call by which the sexes are brought together, why do we never hear it unless we have alarmed the snake? When stationed in Western North Carolina I often, when in the mountains trout fishing, saw and killed rattlesnakes, but never heard one unless I was so close as to be in danger of stepping on it—once within four feet of one lying directly in my path, and on which I should have trod in two seconds. It rattled without putting itself in coil, and when I stopped (which I did promptly, and with a peculiar feeling running up my back) it crawled slowly and silently away with the rattles curved up so as not to touch the ground, and not making the slightest noise. I suppose I should have let it go for having spared me, but I did not.

With regard to the rattle attracting birds, from its resemblance to the sound made by certain grasshoppers, I think it improbable. I never saw birds hunting grasshoppers by ear, and though I have often watched and listened to grasshoppers making their peculiar sound, I never yet saw a bird attracted by it.

Two years ago this summer, I kept two large rattlesnakes in a well lighted box, and was interested by observing their habits. I was most surprised by their fondness for water. I gave them a large panful every second day, into which they would put their entire bodies, going to the bottom and seeming to enjoy it extremely. Of course, they remained under but a short time. In drinking, they drew the water between their lips as a horse does. I never could induce one of them (the largest) to eat, but the other, a fine fellow with eleven rattles, began at the end of two months by devouring a king snake (*Ophio-*

dottatus), about eighteen inches long, which had been in the same box for several weeks. The "O. d." seemed to act as an appetizer, for after that rate and mice, when put in the box, were disposed of in short order. But before striking blaspemy he always rattled, and seemed to work himself into a rage. His fangs were removed when I got him, but were renewed and in perfect condition six weeks afterward, how much earlier I don't know.

I quite agree with you in thinking the number of rattles no indication of the age of the snake. I saw a splendid specimen last June, which measured just six feet in length and nine inches in circumference, which had but seven rattles. But if this development is governed by the vigor of the individual, should not this one have been better provided for in this respect?

Very truly yours,

GEO. H. MORAN.

Our correspondent's observations on the *Orotalides* are extremely interesting, and we should be glad to hear from him again on this subject. Arizona is a pretty good country for snakes, and we have no doubt that one so observant as Mr. Moran will accumulate many noteworthy facts.—Ed.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING JULY 30.—One sun bear, *Ursus malayanus*, presented by Commander George W. Sumner, U. S. N.; one black-headed spider monkey, *Ateles melanochir*, presented by Mr. Bernard A. Collins, N. Y. city; one flying squirrel, *Sciuropterus volancella*, presented by Dr. James S. Bailey, Albany; three ring doves, *Turtur risoria*, presented by Mr. Reed Fitch, N. Y. city; one green monkey, *Chlorocebus sabaeus*, presented by Mr. W. H. Francis, Newark; one white-backed piping crow, *Gymnorhina leucocoma*, presented by Captain Austin Jayne, Rockville, L. I.; one red-lorated Amazon, *Chrysotis collaris*, one fallow deer, *Cervus dama*, bred in the menagerie. W. A. CONELIN, Director.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS FOR WEEK ENDING TUE.-DAY, JULY 16.—One little white egret, *Ardea candidissima*, presented; one beaver, *Castor fiber* var. *canadensis*, presented; three common pea fowls, *Pavo cristatus*, born in garden; one white-throated capcino, *Cebus hypoleucus*, presented; two land tortoises, *Testudo tabulata*, presented.

Woodland, Farm and Garden.

THIS DEPARTMENT IS EDITED BY W. J. DAVIDSON, 820. N. Y. HORTICULTURAL SOCIETY.

MULCHING FRUIT TREES.

So much has been said and written about the practical advantages to be gained by mulching the surface of the orchard and fruit garden, and the subject being so seasonable, that we feel impelled to give a short synopsis of Mr. P. T. Quinn's remarks on the subject, from his address before the Horticultural Society in June last. He said "that mulching should be more generally practiced in fruit producing districts, for it is the least expensive and most effective method of protecting the fruit trees against the bad results often following the frequent and sudden changes of temperature during the summer and fall months, when the surface of the ground is left exposed to the direct rays of the sun. Again," he said, "when the mulch is put two or three inches in thickness, the surface soil is constantly moist and loose even when no rain falls for a term of several weeks, and the trees or fruit receive no check for want of moisture and food under such circumstances." His method is in the early part of the season to cultivate the spaces between the rows of trees in the orchard, using a small one-horse plow and cultivator, running not more than two inches deep. From the 1st to the 20th of July, according to the season, he puts on a heavy coating of ash hay, covering the surface as far as the branches extend. After this the few weeds that make their appearance are easily destroyed, and as every fruit grower knows but too well that for two or three weeks before the time of gathering the main crop of fruit, many fine specimens are being constantly knocked off by high winds. When the ground is thus mulched the majority of them are not bruised or injured for sale. This saving alone he considered paid him for the trouble of mulching the orchard. The only serious drawback he saw was the danger of hay or straw getting on fire in a continued hot, dry spell.

PLENTY OF HONEY.—"More honey on them griddle cakes, waiter," we heard a man in a restaurant say. Evidently he was from foreign parts where bees are plenty from the way he floated his cakes in a puddle of honey. The restaurant man did not seem to like it. He did not appreciate the over-lavish saccharine tendencies of his guest. "Oh, you see, mister," said the honey eater, I'm from San Bernadino in South Californy. I come from a place where honey fresheta is known. In my ranch—it's a two-story adobe—the bees have kind of took possession of the whole upper story. Family obliged to vacate, so we live down below. Bees has got the whole shebang, from the first story landing to the caves. All I have to do when I want honey is to bore a hole in the ceiling with a quarter-inch augur, jam in a ramrod, work her up and down two or three times, and out streams the honey. It's mighty pretty and handy to put a plate of hot cakes under the hole and see the honey spurt. Then we cork up the hole for future use. It's always on tap. Mebbe there is fifty ton of wax in them rooms. Jess a little more honey on them cakes, waiter." "I wish," said the restaurant keeper, "that those bees had stung that man to death before he resched New York."

This is a fitting introduction to a story, a perfectly true one, of the floating apiary devised by Mr. C. O. Perrine. There was once a gourmand who existed only for strawberries. He would strike them in New Orleans about January and follow up the strawberries until he culled the last fragrant wild one in the pine woods of British America about the close of August. Well, Mr. Perrine has found out that bees can be kept at work, say ten months in the year, providing they can find the proper food. There is a spring bloom on a willow which bursts out early in the season in the Mississippi, which

can be followed away up the river to its source. Mr. Perrine's plan was to take a small steamer with two or more hargea in tow, to haul them to a convenient place where flowera were in abundance, to put his hives on shore, and when the stock of saccharine matter was exhausted to follow up the river to new bee pastures. The *St. Louis Globe Democrat* devotes a whole column to Captain Perrine and his floating colony. When last interviewed the bee hoss was at St. Louis. The trip he has made may be considered only as a tentative one. year Captain Perrine proposes to start from New Orleans about the first of April with a steamer and hargea capable of holding some 2,000 bee hives. There is no reason why this venture should not prove successful and a new impetus to bee culture given. We Americans are certainly a very ingenious people.

THE CENTURY PLANT.—This interesting plant is common in tropical America, where it attains colossal proportions, and flourishes under a hot sun that withers many other plants. Botanically it is the Agave, and there are a number of varieties to the family, all of which closely resemble each other in general features. The Agave is frequently met with in Florida, and in its development there it often equals its kind found in Mexico, where it is supposed to be most at home. There is at the present writing a magnificent specimen on the grounds of J. D. Mead, at Mandarin, Fla., which attracts much attention in the vicinity from its enormous size and rapid growth of flower spike. It is the *Agave applanta*, and measures about three feet in diameter. The leaves are long, narrow and tongue-like, and radiating from a centre spike or trunk. These leaves are also thick, fleshy and fibrous, slightly serrated on the edge, and terminate in a sharp, thorny point. At the base of the plant the leaves radiate at right angles to the trunk; higher up they grow at a slight angle of elevation, and this angle of elevation increases regularly to the top of the plant, where the leaves are smaller, owing to not being fully developed, and stand vertically about the flower spike; the general outline of the whole plant is dome-like. The flower spike resembles an enormous stick of asparagus more than anything I can think of. Three weeks from the time it was first discovered issuing from the plant it grew to a height of twenty-five feet, and we hope soon to see the flower. What is considered a sign of the latter's appearance is the recent attenuation of the bulbous head of the spike to about half its former size, and there is also the fact that we can't reasonably expect it to grow much higher. I remember last summer having seen from a steamer's deck some Agaves a half mile away on the shore of the St. Johns, where their great size attracted attention. C. D. D.

Mandarin, Fla., May 21, 1878.

A REMEDY FOR POISON OAK AND IVY.—Last summer we published a number of recipes for the cures of woodland poisons. Here is the specific employed by Dr. S. A. Brown U. S. N., Mare Island, Cal., as published in the *New York Medical Record*:

"This specific is bromine. I have used it with the same unvarying success in at least forty cases. The eruption never extends after the first thorough application, and it promptly begins to diminish. Within twenty-four hours, if the application be persisted in, the patient is entirely cured. I used the bromine dissolved in olive oil, in cosmoline and in glycerine. The application with glycerine is painful, and, I think, possesses no advantage to compensate for irritation. The strength of the solution is ten to twenty drops of bromine to the ounce of oil, used by rubbing gently on the affected part three or four times a day, and especially on going to bed at night. The bromine is so volatile that the solution should be renewed within twenty-four hours of its preparation."

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any change in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and excretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, sign of suffering, etc.

WILL FEMALE DOGS WORRY SHEEP?—We are anxious to have this question fully investigated, and would like our readers throughout the country to give us the benefit of their experience. A correspondent differs from Dr. Hadden, as may be seen from the following letter from North Manchester, Conn., July 22:

In your issue of July 18 I notice Dr. Hadden's letter in regard to female dogs not worrying sheep. In reply I would say that I have owned two pointer hitches who were notorious sheep-killers, and would go sheep hunting every time they were let loose. One of the bitches I owned several years ago and paid more for the sheep she killed than she was worth. The other is now owned by a friend of mine in this town, and is one of the best partridge dogs I ever saw. Last fall one day while we were out shooting we missed the dogs, and hearing a stampede of sheep, we ran out of the cover and found the bitch in question fastened to a fine wether, and so intent was she on her mutton that two charges of No. 8 at seventy-five yards failed to make her let go. So here are two cases for Dr. Hadden that can be vouched for. W. E. HUDSON.

DOGS IN TEXAS.—Galveston, Texas, July 17.—Editor *Forest and Stream*: I have had some severe cases of distemper among my Gordon pups, and will not fail to tell you of a little instrument which has materially aided me in administering medicine, and thereby in effecting cures. To give pills to four pups several times a day (by hand) is not a pleasant job, and, as necessity is the mother of invention, this case set me to construct an instrument. The same consists of a wooden

tube, about three-quarters of an inch outside and about three-sixteenths of an inch inside, in which fits a stick that is a trifle longer than the tube (10in.) I force the pill into one end of the tube, open the dog's mouth, push the tube down the throat, and, by a simple pressure of the thumb, detach the pill from the tube, which is withdrawn forthwith, leaving the pill behind. Simple as rolling off a log. Now, take out a patent and be welcome. During the diarrhoea and colic attending the case of one of the pups when three months old, I have found sweet almond oil very useful. Given in doses of one-quarter to one-half oz. three times a day, it arrested the disease and eased the pain without either opium or laudanum, and in two days changed the stools from blood into something like their natural condition. I have used this oil for some years with the same result. This litter is very good stock, the dam being by Maj. Allison's "Lorne" (No. 1,602, London K. C. S. B.), out of a bitch of the Gordon kennels at Climey Castle, the genuine Duke of Gordon blood. The sire is Mr. W. F. Ladd's "Guy," bought at the Centennial show, a very handsome and good dog. One of the litter, now three and a half months old, which is being raised twelve miles from here in the country by Mr. Rudolph Hellwig, last week took the scent of a partridge, and found and set it in splendid style. Mr. Hellwig, who turned out some very well-trained dogs, says this one will make a rare one. I have reserved out of this litter one dog and two gyys for my use, and claim for them, respectively, the names: "Lorne" for the dog, and "Silk" and "Beauty" for the bitches, the mother being registered in the F. & S. K. B., No. 168. Pedigreed dogs are coming this way more than ever. Among late arrivals we number Mr. C. C. Pettit's fine Laverack bitch "Flora." The same is "pedigreed" stock sure enough, considering the circumstance that she paid a visit to the great Laverack "Pedigree" at Leavenworth, Kansas, recently. Prairie chickens are nearly full-grown, and sport will be plenty this fall. Lone plover are arriving in quantities, and are in fair condition. As a matter of curiosity, I should like to mention that on the 8th of May Mr. Ostermayer killed in the bay a fine lot of large ducks, among them red-heads, half-pates and canvas-backs, for which there are extensive feeding grounds of valisneria in our bay. Rather late, is it not? F. W.

A COOL CANINE.—Editor *Forest and Stream*: The weather here has been very warm of late—away up in the nineties. Was out the other day and had my cocker pup Don with me (seven months old). We passed into a side street, where there was no shade whatever. Ahead of us were two men carrying a long, wide sign. Don eyed the hind one sharply, then ran to the forward one and took a view of him, then ran back to me and looked up in my face to tell me something. I couldn't make out what he wanted, but told him I guessed it was O. K. He ran ahead again, took another good look at each man, then walked in under the sign in its shadow, and continued in that position until I turned out of the street. He did not care much about leaving it either, as he is not partial to the hot sun's rays. J. B. H.

Buffalo, N. Y., July 16, 1878.

"FIDELITY."—The old watch-dog Fidelity, of the Fidelity Safe Deposit Company of Chicago, has just died of old age in that city. On the night of the great fire, Oct. 9, 1871, old Fidelity was at his post in the Fidelity Safe Depository, and when the hurricane of the fire swept over the city he took refuge in an unoccupied vault in the basement and remained until the morning of the 11th of October, when the debris was cleared away and the faithful old fellow was rescued. He has ever since been an object of interest as the only living thing that passed through the great fire.

COCKER SPANIELS.—The following fine stock of cocker spaniels is owned by Mr. M. P. McKoon, of Franklin, Del. Co., N. Y. The dogs and hitches mentioned are the sources of the fine cockers for which Mr. McKoon's kennels are so favorably known: Captain, liver and white, whelped June 16, 1874, out of Juliette by Romeo, liver and white pair of cockers, not akin imported by Mr. S. J. Bestor, of Hartford, Conn., in March, 1873. Sam, dark liver with white star on breast, whelped May 19, 1876; Sam is out of Nellie by Capt.; Nellie is dark liver with white star on breast, a most beautiful hitch, formerly owned by Mr. McKoon, and said to be from a pair of dark liver imported cockers. Flora, liver and white, whelped November 20, 1875; Flora is out of Juliette by Snip, a beautiful liver and white pair of cockers, not akin. Mollie, dark liver with white star on breast, whelped October 14, 1875; Mollie is out of Topsy by Dash (Topsy was imported via steamer Idaho, September, 1874); Topsy is out of Flora by Wallace; Wallace is by Rap (well known in England as the champion Scarbro dog); Flora is by Guess, the champion at the great Horton show, June, 1875; Dash is by Crossland's Duke out of Dora; Duke is by Findley's Dart, imported May, 1869; Dora was imported by Corney in 1866. Bess, liver and white English cocker spaniel, whelped November 20, 1875; Bess is out of Juliette by Snip. Mr. McKoon has endless testimonials from purchasers attesting the excellence of his dogs.

BROKEN LEGS IN ANIMALS.—We have known of cases where the legs of puppies or dogs having broken their lives were sacrificed. A little good judgment and some slight knowledge of anatomy and plastic surgery might save many a valuable dog. A gentleman in this office gives us the following instance where prompt attention and a little ingenuity were employed with gratifying success:

"A very choice Alderney yearling, at Greenwood Lake, broke its off-hind leg a few days since. A doctor set the leg. The process was as follows: Rolled bandages, five yards long, were thickly sprinkled with dry plaster of paris and rolled into cylinders. These were then wetted a few inches at a time, and applied layer over layer to the leg, plaster being liberally sprinkled over between each layer. This was repeated until a solid wall of plaster of over an inch in thickness encased the leg, and the animal was securely confined until the plaster had thoroughly set and hardened, when she was released and allowed the freedom of a small pen. This was over a week ago, and to-day she is able to hobble about the yard, and seems in a fair way of recovery."

CRYSTAL PALACE DOG SHOW.—There was an entry of 1,057 dogs, and the classes were judged in the order given, and by the following gentlemen: Mastiffs, Newfoundlanders, Sheep-dogs, Mr. E. Hanbury; St. Bernards, Deerhounds, Foreign Dogs, Dachshunde, Dalmatians, Pomeranians, Rev. G. F. Hodson and Mr. W. Lort; Bloodhounds, Setters, Retrievers, Rev. T. Pearce; Greyhounds, Mr. Warwick; Pointers, Mr.

J. H. Whitehouse; Spaniels, Major Willett and Rev. A. L. Willett; Fox Terriers, White-haired Terriers, Hon. T. W. Fitzwilliam and Mr. Allison; Bull-dogs, Blenheim Spaniels, King Charles Spaniels, Mr. J. W. Berrie; Bull Terriers, Black-and-Tan Terriers, Smooth-haired Terriers, Mr. J. F. Godfree; Poodles, Capt. the Hon. F. Greville; Bedlington Terriers, Irish Terriers, Skyes, Dandie Dinmont Terriers, Yorkshire Terriers, Pugs, Maltese, Italian Greyhounds, Toy Terriers, rough and smooth-coated, Mr. H. Dalziel.

AWARDS:

Bloodhounds.—Dogs: E Bird's Brutus; 2d, L O Morrell's Rollo; 3d, M Beaufoy's Morton; High com, E Wilbey's Forester and E Nichol's Lusth XII. Bitches: J C Tinkor's Dido. Puppies: E R Ray's Duchess; 2d, M Beaufoy's Rodrick.

Mastiffs.—Champion Class.—Dogs: Prize, F G Banbury's Volsey. Open Class.—Dogs: M Beaufoy's Beau; 2d, R J Auld's Benmore, late Druid III; 3d, Rev F W de Castro's Stanley. Puppies.—Dogs: R Hampson's Lion. Bitches: 2d, J Nichols' Lady.

St Bernards.—Champion Class.—Dogs: Raw G A Sneyd's Hector. Bitches: F Gresham's Abbess. Rough-Coated.—Dogs: G de L Macdonald's Bayard, late Leo; 2d, F Gore's Kaiser. Bitches, W A Joyce's Queen Bess; 2d, W Tatham's Augusta. Smooth-Coated.—Dogs: F C Clarke's Kaiser; 2d, F Gresham's Lion. Bitches: F Gresham's Bernio II; 2d, P R Brewis' Abbess II. Puppies: F Gresham's Sefton; 2d, T H Goodwin's Fritz. Bitches: M L Moran's Nora; 2d, R Thornton's Edith.

Newfoundlands.—Black.—Dogs: H Mapplebeck's Leo; 2d, S W Wildman's Lion. Bitches: H Mapplebeck's Oopsy and Brunetta. Other than black: Prize, W Freeman's Landseer.

Deerhounds.—Dogs: Dr J L Hemming's Doctor. Bitches: Dr J L Hemming's Linda; 2d, J Haddon's (M D) Lufra.

Greyhounds.—Dogs: T Jarvis' Noisom II; 2d, J Waddington's Doctor. Bitches: T Kirby's Ada; 2d, J H Salter's Polly.

Pointers.—Large, Champion Class.—Dogs: R J L Price's Wag. Bitches: R J L Price's Mend. Open Class.—Dogs: G Pilkington's Faust; 2d, R J L Price's Eos Oymur. Bitches: G Moore's Midge; 2d, J E Platt's Mona. Small, Champion Class.—Dogs: G Brewis' Roy. Bitches: W H Walker's Helen. Open Class.—Dogs: R T Veitch's Don; 2d, G Thorpe's Bartram's Special.

Setters.—English, except Black and Tan.—Champion Class.—Dogs: R L Purcell-Llewellyn's Rasmus. Bitches: Prize and very high com, R L Purcell-Llewellyn's Phantom and Princess. Open Class.—Dogs: T E Issard's Bruce; 2d, J E Platt's Rock II; 3d, R L Purcell-Llewellyn's Count Windem. Bitches: J E Platt's Daphne; G de L Macdonald's Meg; 2d, R L Purcell-Llewellyn's Countess II. Black and Tan.—Dogs: J H Salter's Rex; 2d, C H Mason's Ronald. Bitches: C B Hogson's Regala; 2d, E L Parson's Jessie; 3d, H Mapplebeck's Mona. Irish.—Dogs: R Farron's Rex; 2d, J Waddington's Shot. Bitches: G U G Maffie's Mina; 2d, J H O'Brien's Kate.

Retrievers.—Black, Smooth, or Wavy-coated.—Champion Class.—Dogs: S E Shirley's M P Thorne. Bitches: J Andrews' Beaver. Open Class.—Dogs: S E Shirley's (M P) Transit; 2d, E G Farquharson's Beaver. Bitches: E G Farquharson's Bess; 2d, S E Shirley's (M P) Trace. Black, Curly-coated.—Champion Class.—Dogs and Bitches: No entries. Open Class.—Dogs: J H Salter's King Koffee. Bitches: H Mapplebeck's Chicory; 2d, D Lingwood's Kitty. Puppies.—Prizes withheld. Other than Black—J Holmes.

Water Spaniels.—Irish: A W Langdale's Lamerick, late Paddy; 2d, J S Skidmore's Barney. Other than Irish—J Bishop's Dash; Very high com, W Page's Shyluck.

Spaniels.—Cocker.—Dogs: W Arkwright's Lapie and Looby. Bitches: A W Langdale's Libnah. Dogs: A W Langdale's Bachelor; 2d, H Hawkins' Rover III. Bitches: A W Langdale's Lizzie.

Fox Terriers.—Champion Class.—Dogs: W J Hyde's Buffet. Bitches: F Burridge's Dorcas. Open Class.—Dogs, under 18lb: F Burridge's Royal; 2d, G W Brewis' Tip. Over 18lb: F Burridge's Bitters. Bitches, under 17lb: O T Abbott's Fan; 2d, J J Pim's Grass. Over 17lb: J H Murchison's (F R G S) Natty.

Sheep Dogs.—Rough-coated, Champion Class.—Dogs: G G L Macpherson's Hero. Open Class.—Dogs (objected to): J Locke's Joss; 2d, O H Mason's Carlyle. Bitches: S E Shirley's (M R) Horrippe; 2d, W W Thompson's Bess. Smooth-coated.—Bitches: H Mapplebeck's Fan and Lizzie.

Dalmatians.—J Fawdry's Captain; 2d, R J L Price's Tom Crib.

Bulldogs.—Large.—W H Petrie's Noble; Medium.—Dogs: P Rnet's Sancho Panza; T Verrinder's Slenderman. Bitches: H Layton's Venom; 2d, G Raps's Rainbow. Small.—Dogs: Capt. G E A Holdsworth's Doon Bras; 2d, J Bowman's Top. Bitches: W Oliver's Rozelle; 2d, R Fulton's Rose.

Bull Terriers.—Large: T Hastings's Young Prince; 2d, W J Tredinnick's Young Turk. Medium: C P Dickson's Oremore; 2d, J T Simpson's Turk. Small: A L Lovey's Pegasus; 2d, O Stearn's Sting.

Terriers.—Bedlington.—J Cornforth's Newcastle Lad; 2d, D Ross' Flint. Smooth-coated, except Black and Tan: J H Mather's Vril, late Tim. Black and Tan.—Large: H Mapplebeck's Jet; 2d, J H Mather's Viper. Small: H Mapplebeck's Queen III. Skys.—Droptailed: J Pratt's Corrie and Toddy. Prick-eared: F H Vicary's Monarch. Dandie Dinmonts.—Dogs: J Locke's Doctor. Bitches: Capt W A de V Brownlow's R N Nell; 2d, G Sharp's Waep. Yorkshire.—Mrs M A Foster's Smart; 2d, Admiral Sir G Giffard's Cosie.

Dachshunds.—Small Black and Tan.—Dogs: W Schuller's Blasing; 2d, Weyman and Buchanan's Kuno. Bitches: W Schneller's Susella; 2d, Weyman and Buchanan's Waldfrau. Other than Black and Tan.—Dogs: W Arkwright's Otto and Xaver. Bitches: Rev G F Lovell's Pixie. Large: Rev G F Lovell's Schnipferle; 2d, W Arkwright's Olga.

Pomeranians.—Hotcheel and Ramber's Nero.

Poodles.—Lady D. Hindlestone's Moscoo; 2d, Mrs Compton's Kaiser.

Pugs.—Dogs: J Lewis' Sooty; 2d, Miss Jaquet's Tum-tum. Bitches: Miss Monck's Luna; 2d, R L Cosh's Juhst. Puppies: Miss K. Taylor's Young Snnb.

Maltese.—Lady Giffard's Hngh.

Spaniels.—Blenheim.—S W Wildman's Duke of Bow; 2d, Mrs Popham's Frick. King Charles: J Garwood's Prince.

Italian Greyhounds.—Mrs Day's Crucifix, late Tidy.

Toys.—Smooth-haired.—H Mapplebeck's Belle; 2d, R Fulton's Lady Ling.

Extra Prizes.—Best sporting dog or bitch born since Jan. 1: H Mapplebeck's Marquis, Gordon setter. Best non-sporting dog or bitch born since Jan. 1: J Pratt's Tody. Skye terrier.

Whelp.—Philadelphia, May 8.—T. C. Steel's orange and white setter bitch Zill whelped six bitches and five dogs, orange and white. They are by Major Brown's Grouse, winner of first prize at Philadelphia Dog Show November last.

—St. Louis, July 17.—Mr. Vie's setter bitch Russia had ten puppies by imported Statue.

—Mr. A. H. Thomas (Warrenburgh, N. Y.) Gordon setter Fannie (Hope—Grouse, both imported,) whelped six on July 12—three dogs and three bitches, by imported Prince; all well. Puppies marked black and tan, with a little white between fore-legs.

—See advertisement of a very superior kennel for sale. The dogs include red Irish, English and Laveracks, with Laverack and Plunket puppies. Some of the young dogs are ready for the field, and might be worked over this fall. The dogs will be sold low to good buyers. The kennel is situated at Centreville, on the Newark Branch of the Erie R. R., and can be seen in one hour's excursion from the city.

—A gentleman wants a mastiff pup, or a cross between a Newfoundland and a St. Bernard, the latter breed to predominate. Address "TRAMP," care of FOREST AND STREAM.

—Dr. Strachan claims the name Cyprus for his Sensation-Daisy, lemon and white pointer puppy.

—Attention is invited to the advertisement of Dick-Daisy puppies. This is desirable stock.

THE LEAD AND ITS USES.

The ordinary hand lead weighs from seven to fourteen pounds. For small yachts, however, one of four to nine pounds will be all that is required. For depths over twenty fathoms, what is known as the "deep-sea" (pronounce *dipsey*), lead is commonly employed, and will weigh from forty to one hundred pounds. Leads should be oblong in shape and have a hollow cup at the lower end and a large eye in the upper. In the eup tallow is placed, so that upon striking the bottom some of it may adhere and be brought to the surface as an evidence of having reached it, as well as to show the character of the "bottom," which may serve as a rough check upon navigation by comparison with the bottoms noted on the chart—sandy, gravelly, mud, fine shells, etc., as the case may be. Lead lines are marked as follows, premising that in short cruises in comparatively shallow water, as for example a sail up the Sound as far as New London, simple knots will suffice, the number of them indicating the number of fathoms: At two fathoms from the lead, two strips of leather; at three, three strips of leather; at five, a white rag; at seven, a red rag; at ten, leather with hole in it; at thirteen, as at three; at fifteen, as at five; at seventeen, as at seven; at twenty, two knots; at twenty-five, one knot; at thirty, three knots; at thirty-five, one knot. And so on. The deep-sea lead is marked in the same manner, though sometimes the marks up to ten or twenty fathoms are omitted, as not coming into play.

The above-mentioned depths are called "marks," those omitted "deeps." To sound when the vessel has headway on, a "brest-rope" should be attached to the shrouds or other convenient place, so that the leadsman may lean over the side to clear the yacht in swinging the lead. According to the speed and depth of water, he throws the lead forward, so that it may be "up and down" when he comes abreast of the line, enabling him to read off the depth by the marks. When going through the water fast he should swing the lead in a vertical circle, letting it fly off forward at a tangent and take all the line it wants with it. Never pay out slack line, but just keep a gentle feel of the weight at all times. Take care to stand clear of the wake of the lead's swing; we once witnessed a serious accident owing to the parting of the line, the lead striking a man looking over the ship's side at the time. If the depth happens to correspond to any of the "marks" enumerated above, the man heaving calls out, "By the mark three or five." If a little below the surface, "Mark under water three or five," etc. Should the depth measure about a quarter or a half a fathom beyond the mark, it is: "And a quarter five," or "And a half five," etc. If a quarter less than a mark, "Quarter less five," etc. Should the depth be judged about one of the "deeps" not marked on the line, he sings out, "By the deep four," etc. Before going "into the chains," see that the brest-rope is well secured, tallow in the lead, and line clear for running. Examine occasionally the "bend" at the head of the lead; it is apt to part sometimes owing to wear. The lead should have a stout leather strap rove through the eye, and the line attached by a "hocket bend." Never be afraid or ashamed to heave the lead, but keep it going, unless you know exactly what water you are in. We have heard parties exclaim at the "greenness" of others heaving the lead right up a harbor to the anchorage, but there was nothing green about it; it is the proper thing to do, and betokens carefulness and preparation. The want of just such greenness has caused the loss of many a line ship, and some noted yachts likewise. There are a variety of patent leads in use, worked by means of a revolving screw or propeller wheel, connected by gearing to dials showing the number of revolutions made in the descent, and consequently the depth. Others fitted with automatic detaching machinery, so that as soon as the line slackens suddenly in your hands you know the lead must have struck. Others again breaking or completing an electric circuit upon striking and ringing a gong on deck; but all these are for deep-sea work, and will not be needed for coasting work. If in deep water and anxious for an accurate cast, either luff or heave to.

To sound with the deep-sea lead on board a schooner, range the men along on the weather side from the cat-head aft to the quarter. Carry the lead, armed with tallow at its base, forward. Pass the bending end of the line forward outside of all, and becket it to the lead on the forecastle. Let each man collect a small coil of line in his hands, commencing with the first man forward, until you think you have enough line in hand to fetch bottom. Be sure to have the other end of the line rove over a snatch-block at the quarter, and belayed inboard so that it cannot get away. The men will then sing out, "All ready forward;" put the helm down to deaden the way. Then give the order, "Stand by! heave!" The lead is hove over clear of the side, the man calling out to the one next aft from him, "Watch, bo! Watch!" As soon as he feels a strain on the line number two pays out what he holds in his hand as the lead takes it, at the same singing out "Watch-bo! watch!" to number three, who will in his turn let the coil he holds run out, and so on till the last man in the range has done the same. All must heave the line well clear of the yacht. The man stationed at the snatch-block on the quarter watches the line sharply and allows as much more to run out as the lead will take. He must be sharp and know his business, or the line will rapidly pay down over the lead and a false depth be taken. In the meantime the word has been passed to "Lay aft and man the line." The slack is rapidly run in through the snatch-block, and when the line tends up and down, the depth is noted by

the hand on the quarter. Then run in the line as fast as you can, up helm, fill away, lay your course and note the depth and character of the bottom and time of sounding in the log book. If you are hove to and drifting to leeward fast, pass the line from the weather quarter round the stern and along the lee side. By means of soundings alone many of our coasters navigate from this city to Florida, year in year out, and though we may not approve of such a rough and slipshod way of doing business, it serves to show the great importance to be attached to the lead and the range of its usefulness to be wide.

The *Drift Lead* is the name given to a hand lead hove over the side amidstships when at anchor, and generally attended by one hand, if you can spare him. The anchor watch will come in handy for this work. The trend of the lead forward will, of course, indicate that you are not holding but drifting astern, when letting go another anchor or veering chain will be in order. Be careful, however, to give more line to your drift lead if the tide rises after putting it overboard, for unless the lead is on the bottom it will not only fail to indicate, but will deceive by hanging up and down, whereas you may be driving ashore fast in the dark and unknown to you.

YACHTING NEWS.

CORINTHIANS TO THE FRONT.—Since the inauguration of Corinthian sailing, some few years ago, amateur principles have been quietly and rapidly disseminating themselves among the owners of the smaller yachts of our clubs. It is to them that we must mainly look for the rising generation of thorough and able men at the sheet and tiller, and we learn with pleasure that our views are concurred in by many of the most influential members among our junior clubs. These gentlemen have in consideration the offering of a grand prize to be sailed for annually by open boats, under rules of strictly Corinthian character. The matter has been broached among yacht owners generally, and the universal answer seems to be: "Well, if all others will do away with shifting ballast and racing sails, I should be delighted, for it is a nuisance, strains my boat, and, after all, such races are no test of her qualities." The proposition is to limit the number of crew to reasonable figures; to do away with special racing suits, and, above all, to put an end to the mischievous and harassing custom of shifting ballast. Though some difficulty may be met with in the laudable desire of effecting these much-needed reforms, we believe the times to be very propitious to success, and the gentlemen undertaking the work have our best wishes and co-operation in the matter. The true yachting spirit is at war with sailing machines and jockeying, and always will be. May the time soon come when the new Corinthian Challenge Prize will be valued among the public as the famous America Cup among the schooners of all nations.

RACING YACHTS IN FRANCE.—There has been of late a marked renewal of the yachting spirit in France, and thanks to the efforts of *Le Yacht*, which is across the seas, like the *Forest and Stream* in America, the recognized organ of the sport, something like system and progress is rapidly being infused into our French cousins at the helm. They are certainly not far behind us in river or smooth water racing, for to look at the model of one of their *bateau a derive*, is enough to convince us that we would have a good deal tougher work out for us to beat one of their cracks than it would be to settle matters with a Brighton heath-boat, a Clyde lugger or an Itchen boat. The French craft is an outcome more or less of the American jib-and-mainsail, and the amount of canvas they spread carries one back to such clippers as the *Bronx*, *Nettle* and *Fidget* of our own waters. In hull they are not quite so fine, but have a fuller build and a long, overhanging counter, the result, we believe, of following the silly Thames measurement for length, stem to stern post, instead of on the water-line or over all. These racing boats are centre-boards, have very light draft forward, but some drag aft, in imitation of the European cutter. A boat 21 feet on water-line carries about 1,000 square feet of canvas in two sails, a jib and a jib-headed mainsail. This latter is a tall, triangular-shaped sail, something like a mainsail and gaff-top-sail in one. The lower portion of the luff works, as with us, on a "midway," and the upper part or apex being extended above the masthead by means of a sprit and single halliards working on a span attached to the sprit. Altogether, these boats have a smart appearance, and so far as looks are concerned seem to have lots of "go" in them.

BEVERLY YACHT CLUB.—The grand union regatta off Swampscott, Boston, will take place Saturday, July 27, for prizes offered by the gentlemen of that town. Regatta open to all yachts not over forty feet. Time allowance according to the scale of the Dorchester Yacht Club. Start, flying. Centre-boards divided into four classes—23 feet and over, 21 feet to 23 feet, 17 feet to 21 feet, and those under 17 feet. Keels 28 feet and over, 18 feet to 28 feet; keels under 17 feet sail in fourth class for centre-boards; plain sail to be carried only; crews limited as per programme; no trimming by dead weight allowed. This is a most praiseworthy rule. We note that the custom of keeping fast ballast is gaining ground among all clubs, and especially so in Boston and neighborhood, where the baneful custom of "shifting ballast" is hardly any longer recognized as legitimate among the small fry. The judges are Messrs. John Jeffries, Samuel Hammond, Nelson S. Bartlett, F. W. Lawrence and W. Lloyd Jeffries. The regatta committee is composed of Messrs. G. P. Gardner, Jos. G. Minot, Patrick Grant, Jr., J. T. Coolidge and W. Lloyd Jeffries.

LAKE YACHTING.—The well-known sloop *Annie Cuthbert* has been rechristened *Greyhound*, and is now owned by Mr. John Prindle. She has been in the hands of a shipbuilder for an overhauling, and will soon meet *Cora*, one of Pat. McGiehan's cranks. If well-handled we do not think the Canadian craft can hurt *Cora's* record. The Chicago Yacht Club will hold an additional regatta in August, when we hope some real sailing will be done by following our Eastern clubs in abolishing shifting ballast, and limiting crews.

ATLANTIC YACHT CLUB.—The annual cruise of this club will commence Aug. 3. The flag officer on board the *Triton* schooner has issued the following orders: The fleet will rendezvous at Whitestone Bay, Saturday, August 3, at five o'clock P. M., and after arrival of the steamboat from New York, upon signal gun from the flagship, will sail for Glen Cove. Sunday, Au-

gust 4, at 11 o'clock A. M., divine service will be held by the club, under the direction of one or more of the chaplains on board the flagship. All members with their guests, and as far as possible their crews, will be present. Monday, August 5.—Upon signal from the flagship the squadron will get under way and proceed to New Haven harbor, and anchor in Morris Cove. Tuesday, August 6.—Upon signal from the flagship the fleet will sail for New London harbor, anchoring near the city. Wednesday, August 7.—Upon the usual signal the fleet will sail for Greenport. Thursday, August 8.—Regatta day.—All yachts not entering in the regatta will accompany the racing fleet and be prepared to receive guests to witness the regatta, for which purpose they will report to a reception committee, to be hereafter appointed. The Regatta Committee will issue full instructions as to course, restrictions, etc., as soon as their arrangements are completed. Friday, August 9.—Orders for the future movements of the fleet will be issued. All signals for starting will be as follows: First gun, to prepare; five minutes afterward, a second gun, to start. All yachts must be at anchor, with jib down, at starting gun. No yacht, without permission, may take a flying start or leave the fleet during the cruise.

OPEN REGATTA AT GREENPORT.—In connection with their cruise, the Atlantic Yacht Club will hold an open regatta at Greenport, L. I., on Thursday, Aug. 8, under the following rules: The race is open to all cabin-sloop yachts of the Atlantic Club, and to those not enrolled in any regular organization, as well as to any cabin sloop belonging to regularly organized clubs east of Throgg's Neck. There will be three classes—45ft. and over, 35ft. to 45ft., and 25ft. to 35ft. Limited to plain sail, as in Corinthian matches. Course from main dock to and around stake boat off the buoy on Crow Island Shoal, thence around stake boat off Orient Point Hotel and home. Time allowance according to Atlantic Club rules. Measurement for length, from a plumb at water line forward to extreme after end of counter or overhang. Entries to be in Greenport post office by 3 P. M. of Aug. 6 at latest. One prize in each class, valued at \$100. Full information, with printed sailing directions, to be had from the committee the day before the race. The regatta committee is composed of Messrs. Wm. Peet, Latham A. Fish and Ed. Arnold.

BOSTON YACHT CLUB.—This club held its second annual excursion in Boston Harbor, Tuesday, the 16th inst., in the steam yachts *Minnehaha*, *Annie S.* and *Dawn*. A dance and a moonlight sail in the evening finished up a delightful day.

LOOK TO YOUR RIGGING ALOFT.—The amount of brains of which some yacht builders and riggers can boast is not always liberal, consequently owners will do well to do a little of the thinking themselves and should occasionally cast an eye aloft. The number of jacks or cross trees which can be found cock-billed in a fleet is sign of a lamentable lack of capacity on the part of the riggers who put their work together in such a slovenly manner, and is not over complimentary to the watchfulness of owners and skippers. A large cutter sloop lying off New London, not many days ago, had her cross-trees "all-a-starboard," but no one seemed to notice it. But perhaps the most ridiculous sight to a sailor's eyes is the jack of a yacht, which, instead of spreading the topmast rigging, actually pinches or draws it inboard, being therefore worse than useless, a positive drawback to the spar and serving a purpose the very reverse of what it is intended for. Such an affair has been carried by the sloop *Blanche* this whole season, and not one in a hundred has even casually observed the palpable shortcomings of this prominent part of her rig, and we question whether, to the present day, her skipper is aware of the funny figure his boat cuts up aloft. One might travel through the entire British yacht fleet without seeing a display of such luhherliness as that, and pray is it not time that yachtmen in America may be expected to have acquired enough seamanship to do away with a veritable greenhorn's rig?

A BOOK FOR CRUISERS.—For a cruise "down East" you cannot do better than take along Capt. Wm. A. Pratt's Book of Reference. This will give you complete and reliable sailing directions for all ports on your route, lights, their order and height, etc., and will serve to a large extent in place of charts.

YACHTING AT THE EXPOSITION.—From our enterprising contemporary in France, *Le Yacht*, we learn that yachting and boating interests have received full attention at the Exposition, more so, perhaps, than at any similar show. Many will no doubt recollect the meagre and shabby display made at the Centennial of our own nautical interests, our vast yacht fleets and extended boating interests being summarily disposed of by the exhibition of a couple of steam launches and one or two shells, yachtmen and the boating fraternity having laid themselves open to a charge of neglect and lack of enterprise not likely to be brought against our French cousins. *Le Yacht* gives in its latest issue a diagram, showing a large amount of space devoted especially to nautical interests, and adds to it a long list of exhibitors who confine themselves strictly to the sphere of yacht and boat building and the allied branches of navigation, life-saving, etc. Fishing boats, collapsible boats, steam yachts, patent blocks, full-sized cutters, yachts' guns, lights, sails, and all kinds of boats, together with innumerable fittings especially adapted to *la navigation de plaisance*, form a display upon which those unfortunate individuals, compelled to remain at home, will cast their thoughts with envy. Concerning all that is novel or useful in this department, our special correspondent in Paris will send us information in subsequent numbers.

YACHT AND BOAT SAILING.—Mr. Dixon Kemp, well known in connection with the London *Field*, and as author of the excellent book on "Yacht Designing," the standard work of its kind, has just brought out a new volume on "Yacht and Boat Sailing," which gives in a popular manner much of the ground gone over more scientifically in his first book, and besides a large number of plans and "lines" of the different types of vessels in use about the British coasts. The new work will also contain in exhaustive treatment the subject of sailing and handling boats of all kinds. The great success of Mr. Kemp's first work will insure a reception as well merited and popular for his second.

YACHTS' WINDLASSES.—Yachtmen know too well by experience what a hard job it is to break out an anchor by hand, when the windlass won't work. The teeth on the barrel are likely to snap off, and the pull in the shipper too apt to rust and jam fast, while the noise the ordinary ratchet windlass makes when at work is an obstacle to a quiet steal on the rest of the fleet of a fine summer morning. To obviate these defects, Thayer has patented a new windlass, which, though in the market for some years, has not yet been adopted by yachtmen to the extent its many excellencies would seem to warrant. The ratchet, or teeth in the barrel, are done away with, as is also the pull inside the handspike shipper. In their place a clamp is made to grasp the rim of the barrel, and a

socket on the clamp receives the handspike, or windlass bar. If regular breaks are preferred, the lever is fixed to the bits in the centre, and a link is run down from each arm to the clamps. These links can be shifted in and out on the lever, thereby gaining either time or power as desired. As there is no gearing about the device, there is no noise, no clogging or rusting, and consequently no repairs, the windlass being operated by friction altogether.

NEW YORK YACHT CLUB.—Mr. Vermilye, of the schooner *Atlanta*, and Dr. H. Birney Hare, of Philadelphia, who has chartered the *Resolute*, have been elected members. The annual cruise will start from Glen Cove, Aug. 6.

A LARGE STEAM YACHT.—The Herreshoff Manufacturing Co. is building a fine steam yacht, 100ft. long, for Baltimore parties. She is to be very fast, and will be built on the composite principle. Internal arrangements will combine comfort and elegance.

EASTERN YACHT CLUB.—The race for first class schooners, which failed for want of wind at the regular annual regatta, was sailed over again, July 17, in Boston harbor. Course, 23½ miles. *Haleyon* won in 4h. 12m., beating *Foam* 29m. 6s.

THE CUTTER MUREL.—Mr. Stillman's new cutter is about finished. Her joiner work was completed early this week, and she is now in the hands of the painters. Captain Dand, of the *Wanderer*, has made as neat a job of the rigging as can be seen in New York. The way her main rigging has been "turned in" and "set up" is a handsome piece of work, which many sloops might imitate to advantage. On her recent trial trip the cutter is said to have performed remarkably well, though her canvas was only temporarily bent and not stretched. She goes about "like a cat-boat," and is as easy on her helm as any vessel can be, certainly much more so than our hard sailing sloops, which require a wheel to handle them. Not long ago Mr. Hurst had a finely carved and brass-mounted tiller sent over from England for his sloop *Active*, but upon trial he was obliged to fall back again upon his usual steering wheel, the sloop being too hard on her helm. The English type of vessel is always a handy craft, for they use tillers even in cutters of 100 tons and over, whereas we find it convenient, if not necessary, to supply a wheel even to the little five-tonner.

CRUISE OF THE NEW YORK YACHT CLUB.—Mr. Ph. Schuyler, fleet captain, has issued the following orders for the annual cruise of the New York Yacht Club from the flagship *Restless*, dated July 19: General Order No. 1.—The squadron of the New York Yacht Club will assemble for its annual cruise at Glen Cove, L. I., on August 6. Signal for captains to report on board the flagship will be made at half-past eight in the evening of that day. The Commodore will suggest, as an outline of the cruise, that the following ports be made: New London, Shelter Island, New Bedford, Edgartown, or Oaks Bluffs, and Newport, leaving their order to the decision of the meeting. Certain harbors will be entered in specified orders of sailing; and, in addition to the customary regattas and boat races, one day will be set apart for squadron evolutions. The Commodore hopes that all yachts in commission belonging to the club will join the fleet, and will regard the presence of the steam yachts as a desirable addition to the squadron.

N. Y. BAY REGATTA.—The protest of the sloop *Chemau* against the *Nettle* in the Bay regatta, June 27, has been decided in favor of *Nettle*. It was claimed that she had fouled a stake-boat, but the captain of the *Nettle* asserted that his boat, being on the inside and overlapping *Chemau*, was nearest to the buoy, and *Chemau* should have given way for her, and not forced her onto the stake-boat. After taking the sworn statement of the time-keeper in the boat, the judges declared against the protest. It was also decided that *Fidget* wins the prize in her class.

NETTLE WANTS A RACE.—The wonderful *Nettle*, of whose speed and weatherliness we have had something to say before, is out with a challenge to sail *Clara S.*, Mr. Jos. Steiger, a race for \$500 a side. Ex-Commodore Jos. Nobles has also accepted a sweepstakes race proposed by Mr. Munn, owner of the *Martha M.* Possibly *Histle*, *Clara S.*, *Jennie Dilks*, *Chemau* and others of the class may be entered, in which case an interesting race would be sure to result.

YACHTING DRIFT.

On some of the recent cruises collapsable boats would have been very handy on board the smaller yachts.....What has become of the dory that started across the pond some time ago?.....Mr. Louis L. Lorillard has had a jib-and-mainsail built at Newport, on which he will hoist his flag as commodore of the Newport Y. C. She is 27ft. long, 11ft. beam, and is supplied with a cabin.....Mr. Arthur M. Jones has also had a yacht built at the same place 24ft. by 10ft.....Schooner *Clia*, Mr. John R. Platt, has gone into commission.....Mr. A. T. Serrell, of the Brooklyn Y. C., has purchased the *Gypsy* schooner from Mr. Herman T. Livingston. The *Gypsy* was built by Wm. Fouls at Greenpoint, in 1870. She is 73ft. over all, 63ft. 9in. water line, 18ft. 5in. beam and 6ft. hold.....*Tidal Wave* is to have more head sail set on a flying jib-boom. This will improve her looks.....Catamarans are coming into vogue on the lakes.....Mr. Treadwell's sloop *America* has been cruising to the eastward.....New Rochelle annual regatta middle of August.....Schooner *Olytie*, Mr. W. L. Brooks, has been lying off Greenwich, Conn.....*North Star*, Mr. Chas. A. Stevenson, cruising eastward.....Schooner *Triton*, Commodore Thayer, will lead the Atlantic Y. C. on the cruise.....Schooner *Nettie*, Mr. T. P. Osborne, has returned to New York.....S. S. *Mystic*, Mr. A. D. Cordova, is cruising eastward.

OAR AND PADDLE.

THE COLLEGE REGATTA AT OWASCO LAKE.

EDITOR FOREST AND STREAM:

Reeling on the banks of the beautiful Lake of Owasco, at Ensignore, in company with William Blakie and Chas. E. Courtney, on the morning of the 18th, I lay anxiously watching the driving clouds and speculating as to whether the elements, with their usual capriciousness—especially when a college regatta was concerned—would cause a postponement. Surrounding us were thousands of spectators, whose train of thought ran in the same groove as my own. The surface of the lake presents an almost unbroken face, despite the sharp puffs of wind.

As the afternoon aged the wind became subdued and the water presented a most inviting presenee to the shell-boat rower. The facilities for viewing the contest of the freshmen of Harvard and Cornell were of the best possible description. A long platform train had been provided, and this moving

grand stand kept abreast of the contestants from start to finish, affording an excellent view of the whole of the struggle. In the centre of this train were stationed the referee, umpires and the timekeepers. In the early morning Cornell won the choice of positions, and took the west shore or inside, which gave them a little advantage both as to wind and course, the inside having a quarter of a length's lead, owing to the starting line being a diagonal one. Up to noon the Cambridge men ruled the favorites, but shortly after dinner the men from Cornell were the choice in the betting. Making my way to the boat house of Harvard, which was located about fifty yards north of the starting buoy, I examined the crew as critically as my limited time would allow. The men were a fine, athletic looking set of young fellows, and although aggregating less than their opponents, they had the appearance of being much heavier than their adversaries. A visit to Cornell's headquarters revealed the fact that the crew were a wiry set of men, who seemed capable of enduring considerable fatigue, although they were not of the cumbersome build. The boats used on the occasion were twin paper boats, 57ft. long by 24½in. beam. Almost with the striking of 4 o'clock the boys of Cornell were seen paddling to the starting buoys. Harvard seemed in no especial hurry to come to the post, and kept her antagonist in the sun for fully fifteen minutes. In the interval of waiting I was enabled to form some idea of the strong points and weak spots of the Cornell eight. Their stroke was the characteristic one, a long drag through the water, with a stiff arm to the finish, and the same old jerk of the head. The weak spot in the boat was No. 2. He slid too soon, and did not seem to be able to pull his stroke all the way through. No. 6 also rowed very wildly at times. No. 3 was rowing in splendid form, as was also stroke, their work being done well and cleanly. When Harvard came down to the starting point almost every movement betrayed the presence of Bancroft. The same clean, well-pulled stroke which was observable as in the University crew, and had their physique been on a par with their tuition the odds are that they would have reversed the verdict of the 18th inst. The make-up of the two boats was as follows:

Name.	CORNELL. Residence.	Weight.	Age.
Bow—Curtice.....	Moravia, N. Y.....	139	22
No. 2—Foster.....	Ithaca, N. Y.....	137	22
No. 3—Waterbury.....	Repselaer, N. Y.....	166	20
No. 4—Cowles.....	Cleveland, O.....	168	19
No. 5—Allen.....	Anrova, N. Y.....	173	18
No. 6—Jaynes.....	North Norwich, N. Y.....	165	21
No. 7—Cole.....	St. Louis, Mo.....	160	20
Stroke—Shinkle.....	New Rochelle, Ill.....	174	21
Coxswain—Ellistum.....	Cincinnati, O.....	108	16

Average weight of crew, 157 6-8 lbs.; average age of crew, about 20 years 4 months.

Name.	HARVARD. Residence.	Weight.	Age.
Bow—Atkinson.....	Brookline, Mass.....	139½	19
No. 2—Fleetwood.....	Syracuse, N. Y.....	163	21
No. 3—Hammond.....	Nahant, Mass.....	148	19
No. 4—Hawkins.....	New York.....	149	18
No. 5—Foster.....	Boston, Mass.....	139	19
No. 6—Hooper.....	Boston, Mass.....	166	20
No. 7—Howard.....	Worcester, Mass.....	161	21
Stroke—Brandegge.....	Utica, N. Y.....	179	20
Coxswain—Browne.....	Boston, Mass.....	103	19

Average weight of the crew, about 152½ lbs.; average age of the crew, 19 years 7 months.

The Cornell representatives snatched a three-foot lead from their antagonists as soon as the starting signal was given, rowing an evenly-pulled thirty-six to the minute stroke they were half a length ahead ere one hundred yards had been sped over. At a quarter of a mile three quarters of a length separated the rivals, and at the half they were all but clear. Now commenced a series of spurts and counter spurts which lasted throughout 440 yards. Harvard, taking her stroke up to 38, managed to reduce the lead considerably, but, as the burst of speed died out, they fell further and further in the rear, and it soon became patent to every one that Harvard was destined to row second on this occasion, and the only matter of conjecture was how far the crimson would be beaten. This was finally solved by Cornell going over the finishing line 14s. ahead of Harvard. The winners' time was 17m. 13½s. Harvard rowed the three miles in 13m. 27½s. Everything passed off in the most satisfactory manner, and every one was pleased especially. AQUARIUS.

DOWN THE HOUSATONIC IN A CANOE.

WEST CORNWALL, CONN., July 14, 1878.

EDITOR FOREST AND STREAM:

The Housatonic is without exception the ablest river for canoeing purposes to be found east of the Mississippi. It runs north and south, whereby one bank is shady in the morning and the other at night. It is very narrow through all its upper course, so that the canoeist can paddle in the shade, except during the very middle of the day. It is full of variety, there being frequent rapids and long stretches of quiet water. Moreover, it is bordered by a railroad, which transports canoes cheaply and carefully. Altogether it is a river which cannot be too much praised, and which must be navigated before the canoeist can feel that he has sounded the deepest bliss of canoeing. In order that future navigators may rise up and call the writer of this letter blessed and manifest their gratitude in various ways—such as Reina Victorias—the following notes of the cruise of the *Lotos* (O. L. Morse) and the *Violetta* (W. L. Alden), two *Nautilus* canoes, belonging to the N. Y. C. C., are submitted:

The canoeist should start from Pittsfield, which he reaches at 2:25 by the 8 A. M. train from Forty-second street. Canoes must be carted from the freight depot to the river, at the bridge below Sullivan's dam. A Mr. Guild—he can be heard of at the Boston & Albany freight house—will cart them very carefully, and will charge only twenty-five cents for each canoe. Immediately after leaving the bridge the river runs with great swiftness, and though there are few rocks, a bright look-out must be kept for sunken logs. About half an hour will bring the canoeist to the best camping spot between Pittsfield and Lenox—a sort of amphitheatre among the hills—on the right bank. Here he will do well to camp and prepare for an early start the next morning.

From Pittsfield to Lenox is eight miles by the railway and about 640 by the river. The extent to which the stream winds is scarcely credible. If it sees a haystack a mile away to the northeast it will turn back, take two clove-hitches round that haystack, and then wander away in search of a hill around which to tie a bowline. In time, however, it reaches the dam at Lenox without indulging in rapids. This is the beginning of a series of dams which will give the canoeist a good deal of work. The canoe must be taken out at the left corner of the dam and carried into the mill flume. The flume is to be descended to the mill, where the canoe must again be carried into the river. The two carries are

very short, and if Mr. George Spoor is asked for at the mill he will give the canoeist all the assistance which could be asked. Thence the river is clear to Lenox Furnace, about two miles further down. Here are two dams, about one-fourth of a mile apart. It is best to make a single carry over both, taking out at the left corner of the upper dam and launching again in the flume just below the pulp mill. At the latter spot is a luxurious palatial horse-shed, which, for camping purposes, is all that could be desired. It even contains three hitching-chairs, high enough for suicidal purposes in case the canoeist has been satiated with dams. One mile below is the Columbia Mill. On the way down two more rapids are passed; one is at the head of an island, and in both cases the canoeist should keep to the right. The carry at the Columbia dam is an easy one if the canoe is taken out at the right hand corner of the dam. Half mile below is the dam at Lee; here is a carry of about eight rods around the right hand corner of the dam. The best landing place is just beyond a little wooden building under the willow trees.

Close by is another dam. The flume on the left bank should be used, though, of course, it involves two short carries, the canoe being finally launched in the flume below the mill. There is here a larcenous species of small boy, who should be watched closely. Above and below Lee the small boy is civil, honest and ready to carry all sorts of things. At Lee he is a wild barbarian, and though he will not throw things unless the canoeist signally fails to meet his views, he will prey upon stores and baggage like an oriental locust.

Below Lee, which, by-the-by, consists of Lee proper and South Lee, is quick water, with many boulders seeking the destruction of incautious canoes. There is nothing, however, which presents any real difficulties, except where the water is unusually low. After the quick water comes a long and exquisitely beautiful reach of deep, still water, shaded with trees on both banks. Here some uncalculated fiend has placed a dangerous trouser's-trap. It is in the shape of a rustic bench, at the top of a flight of stone landing-stairs, on the left bank. Of course when the canoeist sees it he instantly goes ashore in order to smoke a pipe; but the rustic bench is full of protruding nail-heads, which would tear a pair of sheet-iron trousers. The canoeist wrenches himself free from the trap, with his trousers mangled past identification, and goes on his way filled with holy indignation.

There are two rustic bridges across the river at Stockbridge. Just below the second is a short rapid that is rather rough. It can, however, be run, and the best channel is about one-third the distance from the left to the right bank. The next dam is at Glendale. The rapid below the dam is a bad one, and for the next four miles the dams are so frequent that the Lotos and the Violetta were put on the railway and carried down to Falls Village. This was perhaps a mistake. They might have been launched at Barrington, from whence to the falls at Falls Village there are, as was afterward learned, no obstructions whatever. The canoeist is therefore advised to send his canoe from Glendale to Barrington by rail, to descend the run from Barrington to Falls Village, where Mr. William Hart will cart the canoe around the falls for the usual price, in these parts, of twenty-five cents.

There are some easy and pleasant rapids between Falls Village and West Cornwall, where a dam will be found. The canoe should be slid over the left corner of the dam, and the ensuing rapid should be run, although it looks bad, and is regarded by the villagers as impracticable. The Lotos and the Violetta ran it without taking in any water, although our canoeist was obliged to jump overboard once during the passage. From West Cornwall to Cornwall Pond there is a succession of rapids and old low dams, all of which can be run, although the canoeist will have to jump overboard many times. However, this adds variety to a cruise. Nature has so constructed the human trousers that they can always be dried at a camp fire. To-morrow we proceed down the run. There is an ugly rapid waiting for us just around the corner, and the chances that we come to grief in it seem at present very bright.

W. L. ALDEN.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Centropomus atrarius</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Achoerargus probatocephalus</i> .
Land-locked Salmon, <i>Salmo gairdneri</i> .	Striped Bass, <i>Morone americana</i> .
Black Bass, <i>Micropterus salmoides</i> .	White Perch, <i>Morone americana</i> .
<i>M. nigricans</i> .	Weakfish, <i>Cynoscion regalis</i> .
Muskellunge, <i>Esox nubilus</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Spanish Mackerel, <i>Cybbium maculatum</i> .
Yellow Perch, <i>Perca flavescens</i> .	Cero, <i>Cybbium regale</i> .
	Boatlo, <i>Sarda pinnatus</i> .
	Kingfish, <i>Menticirrhus nebulosus</i> .

TROUT FLIES IN SEASON FOR JULY.

Little Egg, No. 12.—Body and feet of orange and yellow, mohair and hare's ear mixed; wings, bright hyaline, slightly mottled; setae, same as wings.

Lightning Bug, No. 10.—Body of equal parts, of dark brown, and black mixed, tipped with yellow; feet, of feathers from the English grouse; wings, double, the inner wing black, the outer wing a yellow brown.

General Hooker, No. 9.—Body made of bright yellow and green, ringed alternately; feet; red hackles; wings, of the tall feathers of the ruffed grouse.

Little Claret, No. 11.—Body and feet, dark claret mohair, slightly tinged with blue; wings, of the bitter, or brown hen; setae, dark brown.

Claret Fly, No. 9.—Body, dark claret; feet, black; wings, of the brown hen.

Petio Green, No. 10.—Body, feet and wings, a pale green.

FISH IN MARKET—RETAIL PRICES.—Bass, 20 cents; bluefish, 8; salmon, 25; weak fish, 10; Spanish mackerel, 15 to 30; green turtle, 10; halibut, 15; codfish, 6; black fish, 12; flounders, 8; porgies, 6; sea bass, 18; oels, 18; lobsters, 10; sheepshead, 20; Canada brook trout, 50; pompano, 25 cents; soft crabs, per dozen, \$2.00.

Bluefish in abundance from all along the coast; pompano and Spanish mackerel plenty in the Chesapeake Bay; a few have been taken just below Long Branch, selling at 30 cents per pound. Salmon have ceased running in the Restigouche and neighboring rivers. Summer demand for all kinds of fish very active, Coney Island and the hotels on it consuming enormous quantities.

TROUT IN NEW BRUNSWICK.—*Andover*, July 10.—I have just returned from a cruise up the Tobique River, where I

had fine sport with the *Salmo fontinalis*. Yesterday I fished the Paukeyock or Poke-loc, a tributary of the Tobique, and killed nearly as many fish as my Indian guide could carry, besides a fine string of some three dozen, which were destroyed by the crows. N. B.—Never leave your trout exposed off. Tobique Lake, the head of the Tobique River, a most beautiful body of water, is full of the finest of trout. The best route is by canoe from Andover, a pleasant trip of over seventy miles up a beautiful river with splendid scenery. Good Indian guides can be had here with their canoes for a trip of, say three or four weeks, at 80 cents to \$1 per day. These Indians are far more intelligent than the Micmac Indians of the Restigouche. My guide's name is Frank Francis, son of Peter Francis, and is recommended to any sportsman who may visit this region now for trout or later for moose or Caribou.

MASSACHUSETTS—Nantucket, July 24.—Bluefish are very plenty. The largest catches are as follows: Vesta, 110 and 86; Dawning Light, 72. Sculp plenty; sharks ditto.

JACK CURLEW.

MOVEMENTS OF THE FISHING FLEET.—Late advices from the bay report schooner Jacob Bacon, high time of the fleet, 225 bbls. mackerel; schooner Rattler coming next with 125 bbls., and a few other fares ranging from 40 to 80 bbls. The whole number of mackerel arrivals for the week has been nine, but there have been no other fares of consequence. Number of Bank arrivals, 6; receipts, 200,000 lbs. halibut and 110,000 lbs. codfish. Thirty Georges arrivals have been reported, 350,000 lbs. codfish and small lots of halibut. Whole number of arrivals for the week, 45.—*Cape Ann Advertiser*, July 19.

NEW JERSEY—Forked River, July 9.—Sheepshead and weakfish are now biting well. Our yacht, the Belle, came in yesterday with Messrs. C. H. Folwell and P. Scull, having caught in a few hours forty-two weakfish and five sheepshead, averaging five pounds each. No bluefish have been taken for the past few days.

Kinsey's Ashley House, Barnegat Inlet, July 21.—Fishing has been poor for past two weeks is the cause of my not writing. Past week a decided improvement. I quote: Sheepshead past three days, from 75 to 100 per day; bluefish, only a few taken and run small—best catch, fifteen, by Chas. H. Hammond & Co., of Philadelphia; blackfish and sea bass commenced biting freely again on Wednesday, since which good catches are reported—some as high as fifty in one tide; weakfish are taking the hook nicely, and as high as ninety per boat reported. Sam'l M. Garrigan & Co., of Philadelphia, took sixty in one hour.

PENNSYLVANIA—Sinnemahoning, July 20.—Brook trout give us good sport now, and we are improving our time, which is not long, as the season closes with this month.

TEXAS—Galveston, July 16.—We have fine fishing. Sea trout, mackerel, pompano and many others are caught almost any time.

THE BOULOGNE (FRANCE) FISH MARKET.—The total value of fish sold in 1876 in the sixty-one "quartiers maritimes" of France amounted to 88,990,581 francs, and of this sum more than a ninth part was contributed by Boulogne. The average amount earned per man varies in a very remarkable manner in the different ports. For instance, at Boulogne 4,573 men are employed in the fisheries, and the value of the fish sold in 1876 was 9,629,569 francs, making the average earnings of each man 2,100 francs. At Dunquerque the average amount earned per man was only 1,380 francs; at Calais very nearly the same; at St. Valéry-sur-Somme only 1,000 francs; at Dieppe, 1,430 francs; at Fecamp, 1,740 francs; while in lower Normandy, in Brittany, and generally on the southwestern shores of the Channel, the average sum gained was even smaller than in Valéry.

BASS FISHING IN THE BRANDYWINE.

CHADN'S FORD, Pa., July 15, 1878.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Perhaps many of your readers are not aware that the Brandywine—a stream famed in the history of our forefathers' memorable struggle for independence—is now furnishing rare sport for those who delight in bass fishing. This expanse of water has its source in the northern part of Chester Co. and flows southwardly through Chester and Delaware counties empties into the Christina River at Wilmington, Del. About six years ago, among other streams of Pennsylvania, it was liberally stocked with black bass. A law prohibiting their capture for three years was enacted and rigidly enforced. Some dissatisfaction was expressed in regard to the stringency of this enactment; yet the wisdom of it is now appreciated not only by those who fish for the sport they find in so doing, but even pot-fishers—those scavengers who employ the line, seine, set-net and other devices—have come to look upon it with better feeling.

Bass fishing is now at the zenith of its glory; they take the bait eagerly and are game to the last. A few days ago a party of young men camped on the banks of the Brandywine in the vicinity of Chadn's Ford, Del. Co., and among other recreations indulged in that of fishing, with very gratifying success. Bass were caught measuring 17 and 18 inches and weighing 3, 4 and 6 pounds each, respectively. Ah! but they were beautiful! Imagine the ecstasy of our amateur fisherman struggling in the water with a 4 pound bass, and notice the smile of triumph illuminating his countenance as he safely lands his victim. Perhaps his highest ambition, previous to the introduction of bass, was to catch cat fish and eels. Unfortunately for the camping party, or rather fortunately for the bass frequenting this section of the Brandywine, it began raining on the morning of the third day out, and continuing at intervals for two or three days, rendered the creek unfit for fishing for this particular species. The fly is seldom used in angling for the bass, as they do not readily rise to it. The bait most extensively employed is the crawfish.

The scenery along the Brandywine is of an interesting and varied character, and as the stranger gazes upon this historic stream forcing its way through rugged hills and again meandering gracefully through meadow and copse, now rushing forward with the speed of a mountain torrent, and anon moving onward with scarcely a ripple disturbing its placid surface, the sight is one long to be remembered and cherished.

E. T. C.

FISHING AT KANAWHA FALLS.

KANAWHA FALLS, Va., July, 1878.

This place is on the line of the Chesapeake and Ohio R. R., about 333 miles west of Richmond, Va. The immense basin under the falls affords much excellent sport, not only in bass fishing, but the largest white perch I have ever seen are caught here—one weighed sixteen and a half pounds—besides "buffalo," blue cats, and other kinds of fish. On our way to the wild West we stopped over here for a few

days' rest, not with any intention whatever of fishing, but, on seeing a seven-pound bass caught by Mr. Nash, of Beckley's Hotel, our ardor was aroused to the fullest extent, and with a due iron rig we boldly set out for the rapid water. Being a select party of two, quiet reigned, and it was beginning to be monotonous, when a sudden relief in a glow of excitement, and in an instant I was by the side of the female member of the concern to assist in landing the fish, which proved to be a blue cat of some size. Thus our luck continued, with a variation of a white perch, skip-jack and yaller belly occasionally, which did not come up to our expectations, and we returned to our hotel to await the morrow. When we stepped into our "skiff"—or, as it is generally called hereabouts, "skiff"—next morning we were not up to the fishing mark of enthusiasm, caused no doubt by too much marquette singing and its sequence, a sleepless night, when a few minutes after tying the boat to some bushes a violent tug at my bail, with a slinging reel, let me know that at last a bass had pulled me a visit. I am not just as quick to handle my rod as should be, though no and I had quite a fight for the mastery. My little trout rod bent and away with every new turn the bass made, and I thought of the light leader and No. 2 trout hook at the end, while his frequent leaps into the air increased the anxiety for the light rig; but my tackle was the best of its kind, and after some time I had the pleasure of landing a black bass weighing within a few ounces of three pounds. Several smaller ones were caught, the queen of the party landing three or four, the largest weighing over a pound. Other parties met with great success, and Mr. Taylor, of Cincinnati, landed one of seven and a half pounds. This gentleman hooked a channel cat, and after two hours of hard work lost him with a part of his line. These catfish grow to an enormous size, many having been caught here weighing over a hundred pounds; and when one is fishing for something lighter it is quite alarming to hook such a citizen of the water.

Bass are more plentiful here than over before known, and in the rapids, just below the falls, the fishing is just beginning to be most excellent, the river having fallen nearly within its summer banks. There is a good hotel right at the railroad, where trains stop for meals, kept by Mr. Beckley, formerly proprietor of the Yellow Sulphur Springs, Va., which were barred last August, where the sportsman will find himself at home, and can be accommodated with live bait, boat, and general information. There is also, near this hotel, John Hawkins, a sea-burnt fisherman, who can furnish live bait, and knows not only the very place for bass, but the exact spot where the largest may be caught. Besides all this to recommend him, John has an intimate acquaintance with other families of fish; but on account let him go with you, as they are all afraid of him and no luck will come to your hook.

Just across the river is the old Kanawha Falls Hotel, no doubt known to fame in the days of staging through Virginia, but now dependent upon the patronage of a few visitors during the summer season, and the travelers from Nicholas and Webster counties throughout the year. It is a beautifully situated place, though very much out of repair, and would be a most excellent place for the sportsman but for the swarms of mosquitoes which greet one morning, noon and night, and other little disagreeables which make it anything but a pleasant place to put up at; besides there is no one to furnish you with bait nor information.

IAN BEO.

TROUT IN MIDDLE PARK, COLORADO.

HOT SULPHUR SPRINGS, Col., July, 1878.

EDITOR FOREST AND STREAM:

Trout fishing has been fair to good in Grand River and its larger tributaries ever since the ice went out in March. "Tender feet" (new comers) could hardly make a living at it, however, up to the present time. Most fishing to date has been with bait, though in some streams they have taken the fly to readiness. The grasshopper is the favorite bait, but early in the season they are hard to find. The trout fly (May fly or willow fly) came out this season from the 7th to the 15th of June, and remained about ten days. Most years they are ten days later. But they are not generally distributed, being entirely lacking along some streams, and entirely too abundant along others. Where the latter is the case they naturally feed the fish to repletion, so that hardly any can be caught while they remain, in any way. A few miles down from here they swarmed on the trees and bushes along the edge of the water like colonies of bees. Since June 15 we have fished mainly with minnows, which comes exceedingly awkward. Lead must be used, and the hook sank from two to six feet. Then, when a trout "nibbles," you must let him take his time, cat-fish fashion. He will toy with it for some seconds, and probably at last start for the bottom, across or down stream. Then, by a gentle pull, you can hook him about one time in three. He seldom strikes vigorously, though he sometimes does, but, once hooked, his natural life and activity are at once aroused. Occasionally a fish will come to the surface for a minnow, or will follow it, but either is very rare.

Trout begin spawning in these waters as soon as the ice breaks up—possibly before—and are mostly done by May 1, but this rule is proved by exceptions. Ripe spaw may be found until late in the summer; some say late the fall. On June 30 I opened a fish that yet contained eight or ten eggs of this year's spawn, while the ova for next year was distinctly visible. This specimen was fifteen inches long, but unusually slender. In a large creel—thirty or more fish—this was the only one that contained ripe eggs. The great enemy of the trout in this region is the sucker, called by some red horse. They follow the trout when spawning, and suck up their eggs. Fortunately, the pest is being rapidly "stamped out" by seining in the late fall and early spring, when they congregate in deep holes, and can be scooped out, sometimes by the ton. They are marketable in the mining camps at from ten to twenty-five cents per pound, and two or three men join together, and catching a wagon load or two, sometimes make a handsome little speculation. Seining, netting, or trapping trout is prohibited by law, but a trout can seldom be caught when seining for suckers.

The trout season promises well, and is really just beginning. The streams are now going down from the annual snow-water floods, and piscatorial sport will increase rapidly from this date. Already, solitary "pilgrims" meander the banks, and bring to their "boarding houses" from four to ten fish a day, which is enough to keep them trying. The largest trout to my knowledge taken in this neighborhood this season weighed three and a half pounds.

W. N. B.

A GUINEA TO HEALTH.—"A ounce of prevention is better than a pound of cure" is an old and trite saying, and if persons liable to sick headaches, consumption, impure blood, heart disease and any of the many different forms of organic disorders were only aware of how important a part in the economy of the system the skin and its pores play much more attention would be paid to the bath in connection with medicinal agents than at present. The difficulty and cost hitherto attendant upon a visit to some watering place has been done away with through the introduction of Lubin's Portable Turkish Bath, with the aid of which a regular course of treatment may be undertaken at home, as the baths are within reach of all, and if taken according to directions issued with them cannot fail to be of great benefit and comfort to every household. As noticed in our advertising columns Lubin's Turkish Baths are made in Cincinnati and sent to all parts of the country for the small sum of \$10, medicinal agents included.

The third and last event was a pigeon sweepstakes, 10 birds each; 25 yards rise, 80 yards boundary, five traps, Long Island rules. It was won by George Sands.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

-AT-

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[Post Office Box 2339.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*. Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 25, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, July 26.—Trotting at Cleveland, O., and Providence, R. I. Running meeting at Saratoga. Base ball: Worcester vs Buffalo, at Buffalo; Manchester vs Star, at Syracuse; Hoboken vs Amateur, at Centennial Grounds.

Saturday, July 27.—Beverly Yacht Club Regatta at Swampscott. Running meeting at Saratoga. Base ball: Chicago vs Indianapolis, at Chicago; Cincinnati vs Boston, at Boston; Milwaukee vs Providence, at Providence; Manchester vs Star, at Syracuse; Springfield vs Rochester, at Rochester; Worcester vs Hornell, at Hornellsville; Jersey City vs Wilkes, at Jersey City; Montgomery vs Astor, at Union Grounds.

Tuesday, July 30.—Trotting at Westminster, Md.; Buffalo, N. Y. Freeport, Ill.; Sullivan, Ill. Running meeting at Saratoga.

Wednesday, July 31.—Trotting and running meeting as above.

Thursday, Aug. 1.—Trotting and running as above.

—Eighteen feet steam yachts, \$250.

GEO. F. SHEPPE, Waltham, Mass.—[Adv.]

TO THE NORTH POLE.—James Gordon Bennett, on his return to the United States, is fully occupied with the many details of his expedition to the North Pole. From a communication addressed by him to the Navy Department, it seems that a double expedition is contemplated, one by Behrings Straits and the other by the Spitzbergen. In addition to the Jeannette, the Dauntless is to be fitted out. Possibly as much as \$150,000 will be expended by Mr. Bennett in this double enterprise. Mr. Bennett wishes the Navy Department to furnish the crew, officers and provisions for the Dauntless. Petermann, the celebrated German geographer, has given the benefit of his council. The Dauntless is a staunch vessel, and with the engine and screw with which Mr. Bennett proposes to fit her, at his own expense, would be an excellent craft for the Arctic voyage. The same liberality which was given to African exploration will certainly be tendered by Mr. Bennett in the Arctic expedition. If, through the energy of the proprietor of the New York Herald, at last the *ultima* *huls* be arrived at, it will be a crowning achievement.

THE FLYING DRAGONS OF THE WEST.

HOW marvelous are the revelations of paleontology? It is one of the most interesting branches of modern science, and the discoveries made by its followers within the past twenty years have done more, perhaps, than those in any other field to change the scientific thought of the age, and to establish beyond any question the great truths of the development theory. It is in America that the most surprising strides have recently been made in this department of science, and they have been important not only in themselves, but also in their bearing on the beliefs of a very large class of the non-scientific public. Did not Professor Huxley, the first of anatomists, when he lectured before a New York audience, draw his demonstrative evidence of evolution from American specimens and American facts? The genealogical line of the horse, with which all our readers are of course familiar, without *Mesolippus*, *Orohippus* and *Eohippus* to carry it back from the middle Miocene to the earliest Eocene, would be incomplete indeed. How wonderful are the *Dinocerata*, those gigantic herbivores with their six horns and their long trenchant tusks shaped like those of the walrus! The *Tillodontia* are not less strange. What a curious combination of characters; were they the first of Edentates, or a side branch of the Rodents that blossomed out so strangely only to become extinct? We do not know. All is as yet vague and indistinct, but when the material has all been worked up and the relationships of all these strange forms determined, as who can doubt they will be, how interesting will be the story which will be told us of their lives! More thrilling than any tale of love or war that was ever recited.

The discoveries made in the Cretaceous formation are not less wonderful than those of the Tertiary. From these beds came the Toothed Birds, a sketch of whose history recently appeared in the columns of FOREST AND STREAM. These have an especial interest since they form, as has already been shown, a connecting link between the birds of to-day and the reptiles. But, besides these, many forms lived and flourished in the greatest abundance which have now no living representatives, and to appreciate which requires, in the mind of one who has given no special attention to the subject, a considerable exercise of the imagination. Such were the strange Mosasauroid reptiles, a group which occurs sparingly in Europe, but in the greatest abundance in the wide inland Cretaceous sea which once covered so large a portion of what is now the United States. These huge reptiles were perhaps more nearly like the fabled sea serpent of the present day than anything else, but had fore and hind paddles somewhat resembling the flippers of a whale. In length they varied from ten to sixty feet, their wide-gaping jaws bristled with long and sharp pointed teeth, and they were well defended against the attacks of their enemies by an armor of bony dermal scutes. Thus armed and protected they must have proved formidable antagonists to the most ferocious of their marine companions, and we can easily imagine that even the gigantic sharks of that day would have avoided an encounter with these monarchs of the ocean.

But if these creatures excite our wonder how much more do the Pterodactyls, the monarchs of the air? These were large flying reptiles which lived in great numbers about the islands and shores of the Cretaceous ocean which the Mosasaurs inhabited, and their remains are found very abundantly entombed in the yellow chalk which once formed its muddy bottom. They were of various sizes, and the huge leathery wings of the largest species, when expanded, measured twenty-five feet from tip to tip. The membrane which supported the Pterodactyls in flight was apparently similar to that of a bat's wing. Of course, as it consisted merely of skin, it has never been found preserved with the bones, and in only one specimen, from Europe, has any trace of it ever been detected. The Eichstadt Pterodactyl found in the beautifully smooth lithographic stone of Bavaria, shows, owing to the favorable conditions of its preservation, the impression of this membrane, and thus confirms the conclusion previously reached by biologists as to its character. Although in a general way bat-like, the Pterodactyl wing is peculiar. The bat's wing is formed by the four outer fingers being turned downward and outward, and greatly elongated, so that they supported the skinny membrane of the wing like the ribs of an umbrella; that of the *Pterosauria*, on the other hand, is upheld by the fourth, or, as it is called to distinguish it from the other digits, which are short and armed with sharp claws, the wing finger. This is greatly developed, and the membrane, when the wing is expanded, is stretched along this finger, the side of the animal and its hind leg.

The bony skeleton of these curious reptiles is of the utmost lightness consistent with strength. The bones are hollow, and their walls are often scarcely thicker than paper. From this it results that they are never found whole, but are always more or less crushed or flattened by the weight of the mass of earth beneath which they have been buried for so many ages.

Remains of Pterosaurs are abundant in the deposits of the Mesozoic age in Europe, being found from the Lias up through the Chalk; the only ones known from American strata, however, are those discovered in the Cretaceous formation of Kansas. The European Pterodactyls were all comparatively small, and the bodies of the largest of them was hardly greater than that of a cat. All of them had teeth, while in no American *Pterosauria* have any trace of teeth been found, and it may safely be said that these toothless forms are the last stage in the development of this extraordi-

nary group before it became extinct. The oldest of the European forms, *Dimorphodon*, had the entire jaws armed with teeth, and had a long tail. The genus *Pterodactylus*, which lived later, had almost entirely lost the tail, but retained the teeth, while *Ramphorhynchus* had retained the elongated tail, but had lost the teeth from the front of each jaw. In the American genus *Pteranodon* there are, as has been said, no traces of teeth, and the tail is merely a rudiment.

As suggested by Prof. Marsh, these reptiles seem to have followed the same path as the birds in loss of tail and teeth. The resemblance is merely a superficial one, however, and must not lead any one to suppose that the affinities of this group were with the birds. The reverse is true; for a study of the more important characters of the *Pterosauria* renders it at once clear that they are a remarkably aberrant type of true reptiles, totally off the line through which the birds were developed.

The problem as to how the American Pterodactyls lived, and what were their habits, is one which has not yet been solved by the paleontologist. We can easily conceive how the smaller European genera might capture animals of considerable size and strength, for they were strongly built, and their long, sharp teeth would be effective instruments with which to kill small mammals, birds or fishes. But the American forms, so far as known, lacked any weapons whatever, and their great size must be counted against them in "the struggle for existence." An animal with a spread of wings of twenty-five feet would require a considerable amount of food, and from the general weakness of the structure of the skeleton of *Pteranodon*, it seems a fair inference that this food was not secured by the exercise of strength, but was either dead food or consisted of minute organisms.

These questions cannot now be answered, but, happily, there is at present in our Museums a very large amount of material, the study of which will, no doubt, throw much light on all such doubtful points; and we may look hopefully forward to the day when the ancient fauna of Cretaceous times will be thoroughly understood, and all its apparent contradictions explained.

CORINTHIAN PRINCIPLES.

AS a number of yacht clubs contemplate getting under way and cruising in squadron during the coming month, a few remarks, having in view the furtherance of seamanship and navigation, will not come amiss. From our yachting columns it will be seen that those gentlemen who are wont to lead in the sport are in full accord with ourselves on the importance of eliminating as far as possible everything that smacks of the professional racing hack from our amateur tars. Not that we would abolish altogether the sailing captain and his hired crew—for they are often indispensable in their way—but no one will question the propriety of inducing the amateur rather deeper into the science and skill required to navigate his own yacht with safety and due economy. Too many of the favored ones, whose purses have no soundings, carry on the sport simply as a sort of traveling pastime, and look upon their craft as luxurious means of conveyance, concerning the management of which it is not their business to inquire. We are happy to say that of late a marked change for the better seems to have set in, and if the current is not yet at full tide, we trust that, through the efforts in the right direction of many leading spirits of the sport, and such aid as we can ourselves extend, the time may not be far distant when the sailing-captain will no longer be sailing-master, and the owner may know enough to skipper captain and crew himself, and to get his money's worth. It is not necessary that the gentleman amateur should crawl in at the bawse-pipe and work his way aft to the quarter-deck, nor need he deem himself a lubber because he may never have scraped down spars, slushed and tarred his rigging, or holly-stoned decks—though certainly there can be no harm even in learning things from the lowest rung up; but none can claim the title of yachtsman who cannot sail and navigate their vessels in any kind of weather and in any kind of water without giving up the trumpet or their trick at the wheel as soon as it comes on to blow a little stiff, or when in a ticklish channel with lights around you as thick as candles round a birthday cake. On the coming cruises may yachtsmen improve their opportunities to the best. Post up before you go afloat on the parts you propose to visit. Take down your sailing directions and chart; practice laying out courses; allow for tides and variations; look up the barometer, log and lead, and take bearings with an azimuth of objects all round the compass; note the times of flood and ebb; examine special local currents and counter currents. Look to it that you can make with ease and readiness something more than a "granny's knot" or a clove-hitch; learn to know every rope in your ship, so that you may find them in the dark, and lead out the gear for your crew, while, of course, such elementary matters as making and taking in sail, furling, reefing, loosening to dry, tacking, wearing, jibing, etc., should be at your fingers' ends, in practice as well as in theory. When you don't know a thing be not ashamed to ask—it is the only way to learn. Above all, let the flag officers encourage actual seamanship and navigation, and cultivate an *esprit de corps* and feeling of emulation among their brother yachtsmen, so that when the cruise winds up there may have been something learned and something to remember more gratifying to your pride as sailors than a mere recount of places visited, hops attended and fair hearts lost and won.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

Tennessee State Sportsmen's Association, Nashville, Dec. 2.
 Sec'y., Clark Pritchett, Nashville, Tenn.
 Wisconsin State Sportsmen's Association.
 Massachusetts State Sportsmen's Association, at call of President
 Missouri State Sportsmen's Association.

VIOLATION OF THE GAME LAWS.—It is currently stated in Ballston Spa that one of the Saratoga Lake hotel proprietors was in that village a few days since and offered to resident hunters fifty cents per bird for every woodcock and grouse brought to him before August 1. We hope the Saratoga Game Club will keep watch of these fellows and arrest the first one caught at this business. The guests at Saratoga may go without woodcock.

STEALING GAME IN ENGLAND.—The English courts have again ruled that a conviction for larceny for stealing game from a manor cannot be sustained, because at common law wild animals cannot be made the subjects of larceny. The Lord Chief Justice held, the case being that of a man who had killed and carried away sixty rabbits, that killing rabbits was not larceny; that killing and keeping possession of them did not amount to larceny, and that, so long as possession remained in the prisoner, he would not be guilty of larceny.

VIRGINIA PROTECTIVE ASSOCIATION.—The annual report of the Virginia Fish and Game Protective Association, just published, gives evidence of activity and progress. During the past year the membership has largely increased, no less than sixteen other regular associations have been formed throughout the State as well as numerous private clubs not in correspondence with the main association. In addition to the good results already manifest in its own State, the Association has been instrumental in arousing an interest in this subject in South Carolina and Georgia. The association has a large and important field of work. Virginian waters are to be restocked and made to yield the rich returns which in years past were the rule. Lawless destruction of game is to be abated, and the supply fostered and increased. By repeatedly calling public attention to the merits of their cause, and judicious action, the friends of game protection in Virginia are securing their ends.

BIRDS AND PARIS GREEN.—This lavish use of Paris green in certain sections, as a remedy for the potato-bug pest, is attended with consequences which prompt the inquiry whether, after all, the remedy is not worse than the disease. The Springfield (Mass.) *Republican* says of its use: "It is a bonanza for the dealers in this poison, but the reckless application of the green is killing off birds by the hundred in all this region. The sweet singers fall dead from the trees, and local experts who have examined into the cause charge it to the potato-bug poison. Fish are also killed by eating the beetles that get into our ponds and streams." This should suggest at least a more cautious use of this destructive agent. Farmers may find, when the birds are dead and the insects free to increase and multiply, that they have brought upon themselves even a worse calamity than the inroads of the Colorado beetle.

The Rifle.

THE ELCHO SHIELD—IRELAND WINS.

On Friday morning last American riflemen were gladdened by the news that to Ireland the victory in the Elcho Shield match of the previous day had fallen. Not only had they won, but by such a score as had never yet been dreamed of on the Wimbledon range. The Scotch, English and Irish teams were all high up, but, with a score of 1,610, the Irish eight left everything in the way of Wimbledon precedent far behind, and for the fourth time in the thirteen years that Ireland has appeared in the lists as an Elcho Shield competitor the emblem goes across the Channel. Really it is there now, for Ireland was a winner last July with what was then looked upon as a very fine score. The victory was a thorough one, not a mere fluke at the finish, but from the start the Irishmen led, keeping their advantage through the several ranges, and finishing with a lead of 50 points over the English team, the next one on the list, and yet that team had a total which no preceding English team has ever yet been able to equal. Scotland was 12 points further in the rear, and yet, as in the case of the English team, her total was the best aggregate ever made by a Scotch eight at Wimbledon.

The day was perfect, as we know them at Creedmoor—at least an American team of riflemen would have been suited with it. A hot sun poured down its brilliant rays, while from the Glen Alger, that deep gorge-stunted gulley running between the firing points and the targets, the mirage rose strong and gave the targets a dancing appearance. Such days are rare at Wimbledon, and rarer still among the stormy and misty ranges of Scotland. The Scots accordingly failed to get the full advantage of the day. The American practice of the Irish riflemen stood them in good stead now. Upon the Creedmoor range they had met just such a day. On their own ranges at Dollymount, Clandeboye and Dundalk the Irish riflemen had experienced no such days as this scorching, and but for their American experience they could not have rolled up the magnificent total they did. The full notes of the day's doings have not yet come to hand, but it is very safe to hazard the opinion that there was something of the American team system controlling the working of the Irish eight. There could not have been a retention of that old man-for-himself style of doing things which in former years was so characteristic of team work at Wimbledon and the other British ranges. Insensible, but most forcibly, the visiting teams to Creedmoor have been compelled to see that there was much to learn of the American team shooters. The rifle makers, too, have had good hints given them in the Creedmoor matches. It is certain that the teams which visited us and who had fired for a decade before over the Elcho Shield ranges at home, were not getting from their small-bore all that the weapons were capable of doing. A stereotyped way of loading, of sighting and of cleaning had brought a certain mediocre grade of scores, and with these had come satisfaction, until the matches of '74 to '77 opened the eyes of the British riflemen of all grades. In one way or another improvement has been

going on, until the magnificent Elcho score of 1878 goes upon record. For this contest the best of preparation had been made. The English riflemen had been selected with great care, as the trophy was in Irish hands, and Scottish riflemen of the small-bore stripe had many a defeat to wipe out. Last year they were at the bottom of the Elcho list, and for two years preceding they had filled only second place; besides, there was their failure on the American ranges to be swept away, and no pains were spared to put a good team in the field. The story of the day's work is briefly told:

The firing opened shortly after 9 o'clock from the green sward in front of the grand stand. Ireland, from the very start, secured a lead, and rolled up a range total of 543 points, or an average of a little more than 67 per man. England scored 534 and Scotland 532. There was much dissatisfaction among the Scotch, and the Englishmen boasted that the fight was not yet over when this result was announced. But it was evident to all that the day was to the Irish team. They seemed to grasp the weather better and kept their guns under at Wimbledon, and only equalled by themselves a year ago. The Scotch and English totals were, with this exception, the best scores yet made, and it was evident that the day was to be one of big scores. The 900-yard range scores were; Ireland, 535; England, 521; Scotland, 523. This made the total for the two ranges; Ireland, 1,078; England, 1,055; Scotland, 1,055. The 1,000-yard range was fired over very carefully, and the light and wind holding as before the scores did not show any very marked falling off. Taking into account the difference in the ranges, the 532 of the Irishmen at 1,000 yards is even better than 543 at 900 yards. The Scotch men fell off at the 1,000 yards, while the Englishmen did not do much better. Compare the work of this day with the previous Elcho Shield scores which have been made upon the new target during the five years past. That Ireland is picking up wonderfully is shown in the fact of four victories in the past six years, and each time, too, by hitting high scores. The comparative table shows:

THE ELCHO MATCH.				
	800 yards.	900 yards.	1,000 yards.	Total
1874	England, 504	458	445	1,407
	Ireland, 463	462	464	1,405
	Scotland, 463	473	440	1,376
1875	England, 502	527	477	1,506
	Scotland, 515	411	494	1,500
	England, 480	504	483	1,567
1876	Scotland, 501	503	451	1,455
	Ireland, 479	449	451	1,455
	England, 513	517	473	1,503
1877	England, 513	478	473	1,464
	Scotland, 530	470	473	1,473
	England, 543	535	532	1,610
1878	England, 534	521	505	1,560
	Scotland, 532	523	497	1,552

What Creedmoor has done in comparison should be known to every reader of the *FOREST AND STREAM*; but it is some satisfaction to know that Creedmoor yet holds her own for big scores, and that the big American team totals of last year have not yet been passed by anybody, anywhere. What Creedmoor actually has done the following table will tell:

CENTENNIAL MATCHES—CREEDMOOR.				
FIRST DAY.				
	500 yards.	900 yards.	1,000 yards.	Total.
1876	Scotland, 535	528	523	1,586
	Irish, 615	534	523	1,672
	American, 550	518	509	1,577
	Australian, 531	521	490	1,542
	Canadian, 521	476	493	1,490
SECOND DAY.				
	American, 521	515	509	1,545
	Irish, 615	534	523	1,672
	Australian, 521	476	493	1,490
	Canadian, 521	476	493	1,490
1877.				
FIRST DAY.				
	American, 563	547	510	1,620
	British, 553	537	524	1,614
SECOND DAY.				
	American, 575	574	550	1,699
	British, 559	535	515	1,609

DR. CARVER'S SHOOT.

The match of Dr. Carver to shoot against all previous records and recorded times in breaking 5,000 glass balls with a rifle in 500 minutes, has created no small interest throughout the country. Our full report of last week is now supplemented by the detailed exhibit of the official time-keeper, displaying the work in a somewhat different form to that of the summary given with our full score a week ago. The record is given by hundreds, according to the time and number to be broken. A schedule time of 9m. 55-11s. per hundred is given, and these added to any period of the match will give us as in the "schedule time" column the grade of the match at that point. An actual time column explains itself as the total time actually spent in shooting up to any particular point of the contest. The two following columns give the time ahead or behind the schedule at any point, and the column of misses will be interesting in connection with the time.

It will be noted that the best time per hundred was in the first hundred fired at, which was broken in 5m. and 5s., but this pace did not hold, and before taking the rest in the middle of the match, 16m. and 30s. were consumed in breaking a single hundred. Of course in such a case there were short delays while the Doctor received a rapid treatment of the eyes, and besides the intervals between rifles were very marked. The average time per hundred in breaking was 8m. 16s. and a trifle over. In the 31st hundred a rest was taken, and from the time of leaving to his return to the score 32 minutes had elapsed. This, with the 12m. 32s. with which he is credited at the end, leaves a margin of 44m. 30s., making the time actually consumed in shooting the 55 hundred balls 7h. 35m. and 30s. Starting with a lead of 4m. after the first hundred, this was added to until at the close of the 23d hundred there was a margin of 33m. 29s. in favor of the marksman. During the third thousand balls this was cut down until before leaving the field for a short respite he was but 13m. 3s. ahead, and after a pause of more than half an hour resumed his task with 16m. 32s. against him. Then came a really plucky stage of the match: it was up-hill work, but gradually the hill was climbed, and the skillful Doctor threw off the score against him until at the close of the 45th hundred a margin of 1m. remained to his favor. From there on the fight was to widen the difference, and on the last 8 hundred over 12m. were gained, and, with the rest, took off 44m. 30s. from the 500 minutes. There are several points deserving of

attention as among the lessons of the match. As to the guns, it was shown that they are capable of as rapid a manipulation as the most practiced expert can subject them to. When Dr. Carver could empty his favorite rifle of fourteen accurately aimed shots in 15 seconds, each shot bringing down a broken ball, there is little more to be expected from the weapon. It could as easily have done work twice as rapid had any one better still, practical test, the weapons behaved admirably, and this is more noteworthy as the rifles used were ordinary stock rifles and not special pieces gotten up for such work. This is a great triumph for our American rifle makers, and it is doubtful whether any foreign make of weapon could as successfully undergo such a trial. When our long-range small-bore make perfect scores at each of the long ranges, as the peering rifles show such a record as fourteen hits in fifteen seconds, there would seem but little room for improvement in the direction of accuracy or rapidity.

There can be but little doubt that the pulling of the black powder smoke and the products of combustion operated upon Dr. Carver's eyes. The shifting nature of the sky against which he shot may have had a large share in irritating and dazzling, but no one could suffer the constant puff of sulphurous acid in the face and the delicate membranes surrounding the eye without feeling an evil effect. Had some certain that the time would have been much reduced, and by the elimination of many of the misses a further gain would have been effected. It is a noteworthy fact about the misses, that they are to be traced to the use of new weapons, although the guns are, as near as can be by the use of machinery, made as like as like can be. Yet there is a difference, which in the finer discrimination of actual use becomes apparent. Thus, when the Doctor took his old rifle in his hands every shot fired meant a struck ball, and upon taking up one of the stock rifles, exactly similar in every respect, the misses were likely to come. Not that the second rifle was one whit inferior, but there was wanting between it and the shooter that exactitude of action which long practice had enabled him to acquire with the one rifle. Either rifle is as good as the other, but the incalculable element of personality had much to do with this. The whole match was interesting, not as an exhibition there of the possibilities in rifle shooting. It has settled many important points, and an inspection of the subjoined table will be of interest, not of the extreme point to which Dr. Carver may push his skill, for the match was so managed as to fail to bring the highest possibility of work from the Western marksman, but of what may be done in actual work with a Winchester rifle by a specialist:

A GEORGIA BEAR STORY.—The Georgia Historical Society must be a profoundly solemn body if they failed to roar at the following story, which was read to them the other day by Captain W. W. Paine:

"Morgan Gillis was a hunter of some renown, and a bold and powerful man. One day, hunting in the piney woods, he killed a fine buck, and while engaged in skinning it he discovered several Indians creeping toward him. There was no time to deliberate or to tarry. Springing to his feet and leaving rifle and venison behind, he ran for life, and reached the swamp, where he noticed a large poplar, which had been broken off near its top, and had the appearance of being hollow. A knarled or knagged hickory which rested against this enabled him to easily climb the tree, when, to his great joy, he found it hollow, with an opening in the top sufficient for him to enter. He entered it, and sliding to the bottom, found it tenanted by two fat cubs, and at once discovered that he was in the den of a bear, which, fortunately for him, was not at home. About three feet from the bottom of the den was a small knot-hole, from which Gillis saw the Indians approaching, and who seemed much puzzled at not finding him. After hunting around, the Indians disappeared, supposing that Gillis had escaped to the river. Waiting some time, and the Indians not reappearing, Gillis thought it time to leave his hiding-place, and attempting to do so, found to his dismay that he could not climb out, and that he was entombed within the wooden walls of a tree. Our friend was not the first man, nor the last, who had gotten into a scrape and found it difficult to get out. Gillis could not perish with hunger for some days, for he could eat the cubs; but he might perish for water. Having his large hunting knife with him, he commenced trying to cut his way out of the hollow, and while thus engaged he heard, as he supposed, some one climbing on the outside of the tree. He thought of the Indians, and gave himself up as lost. Soon the aperture at the top of the tree was darkened, and an object commenced descending, and, horror of horrors! it was the old bear. Bears always descend a tree backward—and as Mrs. Brinn neared the bottom Gillis, in terror, commenced using his knife vigorously on her, and she not expecting such a warm reception in her quarters, hastily ascended, and Gillis, taken advantage of her discomfiture and hasty retreat, seized hold of her shaggy hair and was drawn to the top. He escaped and reached home in safety, a wiser if not a better man."

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

UNION SQUARE, NEW YORK

Don't Catch Weeds and Logs, BUT CATCH PI-FIL.

Brush's Patent Float Trolling Spoons entirely overcome the defects heretofore found in all other spoons—viz., running so deep as to catch weeds and logs, and below where the fish see them. Made of the best material. Bass size, 75 cents; pickerel, \$1; muskellunge, \$1.25. Each by mail—25 cents extra for gold-plated. Address, **HENRY C. BRUSH, Brighton, Franklin Co., New York.** may 9th

JUST OUT!

NEWLY REVISED EDITION (THE SIXTH) OF

WALLACE'S DESCRIPTIVE

Guide to the Adirondacks.

The only Complete and Reliable Guide to the delightful Fishing and Hunting Grounds of the Great New York Wilderness. Gives all possible information relative to Routes, Hotels, Resorts, Outfits, Guides, Distances, etc., with amended railway schedules, etc. Handsome 12mo. Flexible Covers, Red and Gold. Maps, etc. Beautifully Illustrated. Over 300 Pages. Price \$2.

TESTIMONIALS:

The instructions embrace everything that can be desired. Taking it all in all it is the most complete book that has been published on the Adirondacks, not excepting even my own.—*Hon J. T. Headley.*

I regard your "Descriptive Guide" and the "Appendix" as a most useful, nay indispensable, manual for tourists to that wonderful Wilderness. A tour in that region is eminently a practical matter, and for that reason I regard your "Guide" as an important, useful and timely publication.—*Benson J. Lossing.*

It is the only thing of the kind that has yet been published—the very thing that has been so long wanted and waited for.—*Alfred H. Street, Author of "Woods and Waters."*

Sent by mail on receipt of price, \$2, by **WAVERLY PUBLISHING CO., Syracuse, N. Y.**

THE LATEST AND ONLY CORRECT Treatise on the Game Cock.

The undersigned will issue a publication entitled "Treatise on the Game Cock," as soon as practicable after June 15, 1878.

The work has been compiled by Mr. F. W. McDougall, whose long experience as a breeder and trainer of Game Cocks especially for the pit, is a sufficient guarantee as to its reliability.

Its purpose is to introduce a new and thorough treatment in breeding, rearing and training the Game Cock. It will contain such information, and will be so serviceable to fanciers and breeders that it will be indispensable to all, and will be preserved as a book of reference for years.

A few pages of the book will be reserved for advertisements at prices within the reach of all. We give every advertiser books enough to pay for his advertisement. Send for circular.

Fanciers and breeders subscribing for the book before the name is printed will have their names inserted in black type, in the pages reserved for that purpose, with the variety of stock they raise, for 95 cents (which entitles them to a book). Price of book, ten cents. Address,

McDOUGALL BROS.,

64 South Illinois St., INDIANAPOLIS.

Gunpowder.

Lafin & Rand Powder Co.

No. 26 MURRAY ST., N. Y.

Sole Proprietors and Manufacturers of

Orange Lightning Powder.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6½ lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the best. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

BLASTING POWDER and ELECTRICAL BLASTING APPARATUS. MILITARY POWDER of all kinds on hand and made to order.
Safety Fuse, Frictional and Platinum Fuses.

Amphibious, showing sizes of the grain by wood cut, sent free on application to the above address.

Gunpowder.

THE
HAZARD POWDER CO
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 5 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland partridge shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For duck, for- or water shooting. It fakes any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. and 1 FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON & MUSKET POWDER. ALSO, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

Fisher's Muzzle-Loading Long-Range Match Rifle.

Interchangeable Grip and Heel Venter Scale, and Wind-Gauge Front Sight, with Spirit Level. Blue English Walnut Pistol-Grip Stock.

This Rifle requires no patent muzzle to load it. Uses the same bullet as the Sharps and Remington rifles. Loads the same as breech-loaders, where they do their best work, viz., from the muzzle. As Perry's Score-book says: "No shells to cart around and pay for. Can be used at one-half the expense of the breech-loader. With powder and balls always ready for a day's sport." Every rifle guaranteed. Breech-loading rifles, at manufacturers' prices. All long-range rifles sighted and tested at Greenham without extra charge. Agent for P. WEBLEY & SON'S BREECH-LOADING SHOT-GUNS. Send for Circulars. H. FISHER'S Illustrated Catalogue and Score-book for Rifle Practice, price 25 cents.

THESE PISTOLS WARRANTED

EVERY REQUISITE FOR SPORTSMAN'S OUTFITS.

Agents for Huber's Champion Glass Ball Trap, each \$9 00

Huber's "Patent Rough Glass Ball Trap," each 6 50

Bogardus' Patent Rough Glass Balls
and Glass Ball Traps.

The "Trips" are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that prevents the ball from slipping to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit.

CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at 1¢.

Balls and Trips can be ordered through all Gun Dealers. Liberal discount to the Trade.

MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price \$8. Old style, \$6.

Parties buying glass balls will receive, in each barrel containing 250 balls, score book and rules for glass ball shooting, containing 30 pages.

HEADQUARTERS FOR BALLS, HAGGERTY BROS. & CO., 10 Platt Street, N. Y. City.

FOR TRAPS, HART & SLOAN, Newark, N. J.

Breech Loading Guns

A SPECIALTY

AGENTS

FOR THE FOLLOWING CELEBRATED MAKERS
W. & C. Scott & Sons (winners at the International Gun Trial of 1873); J. P. Clabrough & Bro.; P. Webb & Sons, and Westley Richards.
Thomson's Hunting Suits and Oil Finished Game-keeper's Shoe Packs.
Dixons & Hawksley's Shooting Tackle.
Sartre's Brass Shot Shells.
Bossey's Patent Gyro Pigeon and Trap, with cage and 100 birds.

Black's Patent Cartridge Vest.

This Vest affords the best arrangement yet invented for carrying cartridges. The weight is so evenly distributed that it is scarcely felt. Cartridges can be carried with the heads down in this vest, which is of great importance when brass shells are used, as when carrying them with the head up the weight of the shot often forces the wad forward, when bad shooting is the result. Ordering send measurement round the chest. PRICE \$7.50.

AGENTS FOR THE UNION METALLIC CARTRIDGE CO'S. AMMUNITION.

Medicinal.

BRANDRETH'S PILLS.

We believe these celebrated pills are pre-ordained by their inherent merits to be the medicine of the world. They impart a power by which every organ of the body becomes healthy. Nature has formed the bowels so that they are capable of drawing to them the impurity of any organ of the body, however distant. Some have little more to do when we are sick than to purge freely with a medicine time has proved will not hurt. This treatment always quickly restores the health when adopted in time.

BRANDRETH'S PILLS

care both for the present and for the future. Ask the man who was dying from constipation and who cured him; he told you of Brandreth's Pills. Ask him who had dysentery for months what cured him; he says Brandreth's Pills. They are the best medicine for Small Pox, and they prevent any marks. A case occurred recently where Brandreth's Pills cured a deep ulcer of the foot, which the doctors said could only be removed by amputation; but, in twenty-five boxes cured it and restored the patient's health. Reference W. M. Skinner, of White Plains.

Brandreth's Pills are of a quick medicine, but a scientific preparation, which have been prepared by the present proprietor for over fifty years. They are wholly composed of vegetable and vegetable essences, are incapable of hurting the most delicate, yet sure to cleanse the bowels and blood and exert a correlative effect upon every form of disease. Where for twenty years the patient had a movement of the bowels without medicine or mechanical means, a month's use of Brandreth's Pills cured, restoring the bowels to regularity.

The secret of recruiting the vital principle is discovered in this medicine; it generates and increases healthy animal warmth. Provided the great organs are not irreparably injured, there is no disease Brandreth's Pills will not cure. Remember, they concentrate the vitality of the system to effect the disease wherever located in the body.

BRANDRETH'S PILLS

are sold by all dealers—25 cents a box, either sugar-coated or plain—and at Dr. Brandreth's PRINCIPAL OFFICE, 294 CANAL STREET, NEW YORK.

J. BRIDE & CO., 297 Broadway, New York.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle .22, .32, .38, or .44 as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1873. Send for a Circular and Price List.

THE WINNING GUN.

At the international pigeon shooting, Monaco, Feb., 1876, the Grand Prix de Casino, an objet d'art valued at \$160, and a money prize of £105, the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Cholmondeley Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 25 yards and 1 foot and 3/4 yards. He also won the second event, killing 8 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. J. Fordey, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 86 birds out of 100, using one barrel only. The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 168,923. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's Works, Birmingham, England. H. C. SQUIRES, Agent, No. 1 Cortlandt Street, New York City.

Hart's Sportsman's Favorite Metallic Shells. FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing mis-fire. The Cone is made of nickel, and fastened solid in its place. Neither rusts nor corrodes fast like movable anvil made from steel. The Nickel Cone also prevents mis-fire when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These Shells are finely finished, and made any length ordered, from 2 1/2 to 3 1/2 inches. Shells and Loaders and Descriptive Price-List can be obtained from all the leading Sportsmen's Houses throughout the country. HART & SLOAN, Newark, N. J.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA. MESSRS. GEORGE E. HART & CO.—Gentlemen: The fifty Shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly, A. H. EGGARDUS.

FIRST PREMIUM, CENTENNIAL EXHIBITION—REPORT—"Exact uniformly of size, truly spherical form, high degree of finish and general excellence."

Painting.

PAINTING.

EVERY ONE THEIR OWN PAINTER.

50 Per Cent. Saved.

We are manufacturing a very fine Pure Ready-mixed Paint, mixed in such a manner, that any ordinary stable or farm hand can make as good a job painting as a painter can with paint mixed in the old way. This is because our paint does not set quick, and thus show marks of the brush. We sell it lower than materials can be bought in the ordinary way, and pay freight on certain sized orders.

Any one wishing to paint, will have mailed free, upon application, our book, "How Every One can Paint and Select Harmonious Colors." Address INGERSOLL PAINT WORKS, South and Dover streets, New York.

Musical Instruments.

WATERS' MIRROR TOP ORGANS.

These beautiful organs are remarkable alike for purity of tone and perfect mechanism. Their cases are all richly finished in Solid Black Walnut. We sell a better instrument at a lower price than any other house in the United States.

Waters' Pianos Grand, Square and Upright, are the BEST MADE, the Tone, Touch, Workmanship and Durability unsurpassed. Warranted for SIX YEARS.

Extremely Low for Cash or on Installments. A liberal discount to Teachers, Ministers, Churches, etc. AGENTS WANTED. Catalogues Mailed. Second-hand Pianos and Organs at GREAT BARGAINS. HORACE WATERS & SONS, manufacturers and dealers, 40 East Fourteenth Street, New York.

TO SPORTSMEN:

THE PENNSYLVANIA R.R. CO.

Respectfully invite attention to the
Superior Facilities

afforded by their lines for reaching most of the
TRIPPING PARKS AND RACE COURSES in the
 Middle States. These lines being continuous
 from all important points, avoid the diffi-
 culties and dangers of reshipment, while the excel-
 lent cars which run over the smooth steel tracks en-
 able STOCK TO BE TRANSPORTED without felling
 or injury.

The lines of
Pennsylvania Railroad Company
 also reach the best localities for
GUNNING AND FISHING
 in Pennsylvania and New Jersey. EXCURSION
 TICKETS are sold at the offices of the Company in
 all the principal cities to KANE, RENOVIA, BED-
 FORD, CHESSON, RALSTON, MINNEQUA, and
 other well-known centers for

Trout Fishing. Wing Shooting, and Still
 Hunting.

Also, to
 TUCKERTON, BEACH HAVEN, CAPE MAY,
 SQUAN, and points on the NEW JERSEY COAST
 renowned for SALT WATER SPORT AFTER FIN
 AND FEATHER.

TROUT FISHING!

The Wisconsin Central Railroad

THROUGH TO
LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland
 and return for \$20 are sold at 63 Clark street, or the
 C. M. and St. Paul, Madison Street Depot, Chicago;
 also at low rates from Milwaukee. Dogs, guns and
 camp equipment taken free.
 The points of attraction to sportsmen on this
 "Forest and Stream" route are Menasha and Green
 Bay for bass fishing; Butternut Creek and Lake for
 muscatonge; the many branches and lakes of the
 Flambeau and Chippewa which teem with bass, pike
 and pickerel, never till last season fished by sports-
 men. Between Suver Creek and Ashland all are
 trout streams, and many others can be easily reached
 along the shore from Ashland or Bayfield, while
 rock fishing for speckled trout and trolling in the
 Bay affords excellent sport.
 The Chequamegon hotel at Ashland, built last
 year, has been enlarged, and is supplied with a
 steam-yacht, sail and rowboats and excellent guides.
 The atmosphere at Ashland is a sure preventive of
 hay fever.

Steamers from Ashland to all Lake Ports.
 Send for Guide Book.

Sportsmen's Routes.

"THE FISHING LINE."
 Brook Trout, Grayling and Black Bass Fisheries
 of Northern Michigan,
 VIA THE
Grand Rapids & Indiana RR
 (Mackinaw, Grand Rapids & Cincinnati Short Line.)
 Sportsmen who have cast a fly, or trolled a spoon
 in the

Grand Traverse Region
 will come again without solicitation. All other lovers
 of the Rod are invited to try these waters, wherein
 the fish named above, as also Muscalonge, Pike and
 Pickerel abound.
 In no other streams east of the Rocky Mountains
 is the famous AMERICAN GRAYLING found in
 such numbers.

BROOK TROUT Season opens May 1.
GRAYLING Season opens June 1.
 The sportsman can readily send trophies of his
 skill to his friends or "Club" at home, as ice for
 packing fish can be had at many points.
TAKE YOUR FAMILY WITH YOU. The scenery
 of the North Woods and Lakes is very beautiful.
 The air is pure, dry and bracing. The climate is
 peculiarly beneficial to those suffering with

Hay Fever and Asthma.

The Hotel accommodations are good, far surpass-
 ing the average in countries new enough to afford
 the finest of fishing.

On and after June 1 Round Trip Excursion Tickets
 sold to Points in Grand Traverse Region, and attrac-
 tive train facilities offered to tourists and sportsmen;
 also Mackinaw and Lake Superior Excursion Tickets;
 Dogs, Guns and Fishing Tackle Carried Free, at
 owner's risk.

Camp Cars for fishing parties and families at low
 rates.

It is our aim to make sportsmen feel "at home"
 on this route. For Tourist's Guide, containing full
 information as to Hotels, Boats, Guides, etc., and
 accurate maps of the fishing grounds, send to

P A I N E ' S

FEATHER-FILLED GLASS BALL.

PRAIRIE FIRES NEVER SPREAD FASTER
THAN THE SALE OF THIS BEAUTIFUL AND POPULAR BALL.

NOTICE TO SPORTSMEN:

Through an unavoidable accident we have been prevented from filling our very numerous orders for the two last weeks, we now take this opportunity of informing the public in general, and the **Dealers in particular**, that we are fully prepared to meet and fill all orders for the

P A I N E PATENTED FEATHER-FILLED BALL,

and will hold in stock in future sufficient to fill all orders, as we have increased our facilities so much that we are prepared to make **50,000 per day if needed.**

"BROKE" was the word said 5,500 times by the referee in the Great Match between **DR. CARVER** and time. The **P A I N E FILLED BALL** was used in preference to all other. As to the merit of the ball we need hardly call your attention, since every prominent shot, including the most marvelous of all marksmen, the king of the rifle,

DR. CARVER,

has used them in preference to all others. No better criticism could be given the ball than the gratuitous praise bestowed upon it by the press of the entire country since its production.

P A I N E ' S PATENTED FEATHER-FILLED BALL

is the ball of the future as well as of the present.

We will from this day commence to fill all back orders, and any others that may come will receive prompt attention.

Every ball made to scale, and no imperfections. **\$1,000** Reward to any one who can find a single ball in ten thousand beyond the maximum weight (two ounces). No thick sides or bottoms. Its uniformity of thickness won it favor from the first, and out of the immense number sold we have never had one complaint.

NO CLOSE DECISIONS.--A Feather-filled Ball once struck by shot, and the tale is told. *It satisfies every one on the instant, and saves all unpleasant work for Referees*

NO SHORT COUNT.--Every barrel is warranted to contain over three hundred to allow for reasonable breakage. Will also contain copies of the Standard Rules for Glass Ball Shooting for one, two or three trips.

FOR SALE BY ALL DEALERS IN SPORTING GOODS THROUGHOUT THE WORLD.

HEADQUARTERS: Bohemian Glass Works, 214 Pearl Street, New York.

FLYING TARGET.

(Patented August 7, 1877, No. 198,579.)

The way it came to pass was this: I to a sporting club belong; I love to shoot; I love to see the long-bill tottling to the cope from whence 'twas flung, or in its whirling flight the goodly gronae come fluttering to the ground, and hence to make myself proficient in the manly sport, I joined the club, and practiced at the gyro, glass ball, and the living bird, and as a substitute therefor the CHEAPEST and the BEST, the Flying Target, I've contrived. For information, if you wish, or for a trap, address

FOREST AND STREAM ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

Terms, Four Dollars a Year.
Ten Cents a Copy.

NEW YORK, THURSDAY, AUGUST 1, 1878.

Volume 10.—No. 26.
No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun.

A Bass in the Meshes of the Law.

WE have upon our bench two enthusiastic fishermen—Judges M. and J. They are both tall, large men, of full habit, hardly adapted to the labor of following a trout stream all day through difficult country, but for sitting patiently upon a log or in a boat they can't be beat. They both are possessed of the true inspiration of old Izaak Walton, and calm contentment fills the soul of each when comfortably seated by lake or pool with rod in hand. They have their specialties. That of Judge J. is trout; of Judge M., bass. This paper is to be devoted to an account of a contest between Judge M. and a black bass last summer, at Oconomowoc; but I like to be impartial, and will preface it with a story lately told me by an eye witness of an incident in the experience of Judge J. A small party, including the Judge, once went to one of the bays of Michigan in pursuit of recreation. One day they found themselves at the mouth of a trout brook emptying into the bay, which furnished excellent fly fishing at its junction with the lake waters. Now the Judge was not particularly expert with a fly—his best hold was mud worms—and he proceeded alone up the stream to find a spot where he could use his worms to advantage. He found, after a good deal of labor in scrambling over rocks and through bushes, and once tumbling into the brook and getting well soaked, a splendid pool. It lay at the foot of a high fall between elevated rocky cliffs. With difficulty he established himself in a good position, disposed his basket handily near by, took off his coat, wiped the perspiration from his brow with a sigh of relief and satisfaction, and proceeded to business. He found the pool well stocked with trout, and he had plenty of customers for his worms. He had laid away three or four in his basket, and happiness coursed all through his veins. He was thoroughly at peace with himself and all the world. It is too bad to disturb the serenity of this picture and to ruffle the placid brow of the Judge, but I am writing history. He had again cast in his worm and was waiting quietly for the expected bite, when a strange thing happened; a goodly sized trout emerged from the centre of the pool and proceeded, flapping and struggling, straight up toward heaven. In amazement the Judge followed him with his eye until he saw him land in the hands of a lusty boy at the top of the overhanging cliff, and he saw two small faces peeping at him and two fish poles sticking over the edge. He took in the situation at once, and his brow clouded with righteous wrath. Here was a clear trespass upon his rights; was not this his pool? Had he not discovered, and, as it were, pre-empted it? Was he not in the actual and visible possession? Whether he had a valid legal title or not, he had the *possession*, and trespass would lie against a mere intruder. Law and equity were both on his side. He shouted to the boys in tones which rose above the roar of the waterfall, and ordered them away, but they did not go away worth a cent; instead thereof two lines descended into the pool beyond the reach of the Judge, and other trout began to go struggling toward heaven in the wake of the first. This was insufferable, unendurable. He fumed and threatened, but there the boys stayed and the trout continued to ascend. He shook his fist at them and hurled at them all the terrors of the law. He would send them to jail for the larceny of his fish; he would commit them for contempt of court; but they would not listen to reason and cared naught for the threats of the law. The only reply vouchsafed was made by one of the boys placing his thumb to his nose and making sundry gyrations with his fingers. The heights were inaccessible to the Judge, and he was compelled to sit there and see his fish dancing up right before his face to swell the string of those boys, until the pool was exhausted. Could the agony of Thotalus have been greater? Where now was the majesty of the law? Was all respect for the judicial ermine gone from the land? Had communism come with its destroying hand, striking at the very foundation of society, and effacing all regard for the rights of property or persons? With sad and gloomy heart the Judge gathered up his basket, with its five or six trout, put on his coat and departed. To this day, occasionally, the Judge sitting on the bench, apparently in a reverie, wears a despondent and angry expression. He is thinking of those boys.

We will leave him to his melancholy reflections and turn to the more cheerful picture of the two experiences of Judge M. He was spending a few days at Oconomowoc during his summer vacation, hired there by the reputed beauty of the country, the charm of its numerous lakes, the attractiveness of its good fishing, and the *dolce far niente* of all its surroundings. The day following his arrival he sallied forth, accompanied by an *amicus curiæ*, to test the fishing. Armed with a light rod and a Kentucky reel, he was prepared for work. Genesee Lake was selected as the *locus in quo*. A bucket of minnows was provided, a good boat procured; the friend took the bow,

the boatman took his seat and the Judge settled himself in the stern, and all was ready. "Open court!" said the Judge, and off they went. The day was beautiful, and the good-natured face of the Judge beamed in sympathy with the serenity of nature surrounding him. Soon the fishing-ground was reached, and the Judge prepared for sport. He put on his spectacles, without which he would have been as Hercules without his club. He placed a minnow scientifically upon his hook, and raised himself to his feet and straightened out his tall form, and seemed to gather together all his powers for business. He poised himself gracefully, but firmly, and essayed to make a cast. Swinging the rod in circles two or three times about his head to gather momentum, he sought to launch his bait to a distance across the water, but neglecting to remove his thumb from the spool of the reel, where he had been instructed to place it, the line failed to run, and the minnow sailed off "upon his own hook" and left the Judge's behind. The Judge was a little discomfited, but excused himself by saying that his attention had not been called to the point. Another minnow was adjusted and another cast attempted, and this time with better success. The bait struck the water about two rods away, and, as good luck would have it, close by where a bass was lying in wait, and he immediately leaved upon it. Now began a contest worthy the pen of Homer. In what fitting language can my poor pencil, unused to war, portray the varying fortunes of the mighty combat? As soon as he recovered his presence of mind, disturbed by the suddenness of the bite, the Judge struck the fish hard and the hook was securely set in one of his capacious jaws. The fish, startled at this unexpected interference with his personal liberty without due process of law, contrary to the provisions of the Constitution of the U. S., concluded that he was in danger of falling into lawless hands, and started for home at his best gait. He was a robust, healthy young fellow, and he made the Judge's reel hum and his line smoke as it flew after him. The Judge began to get excited. This fish was evidently intending to fly his jurisdiction, in other words, to give leg bail. He seized the handle of the reel and brought him up with a "round turn," to wit: a turn of the reel. I think the Judge was right; the fish was caught in the act of stealing the bait, and no warrant was necessary. The fact that the Judge had himself hooked the bait is immaterial.

The bass now thought he would look at the situation above, and taking a good run to obtain headway, he sprang three or four feet out of the water and looked about him. He saw the determined expression of the Judge's face, the set lips and the eyes glittering through the glasses with fierce excitement; he saw the towering form firmly planted upon his outspreading legs, while he held the rod with an iron grip. Satisfied that the Judge was prejudiced against him, he immediately moved for a change of venue, and started hastily off for the next county; but the Judge overruled the motion, and began to reel him in. The bass now felt that his case was well nigh hopeless, and that the court was organized to convict; but he concluded to join issue and fight it out on that line, hoping to detect some flaw or error in the proceedings. He struck for a lot of rushes and weeds, growing near by, and notwithstanding the exertions of the Judge to prevent, he reached them in safety. He wormed himself back and forth and sideways through them until he had got the line wound and soared and twisted all about them, and then he sat down to rest and prepare for trial. But the Judge was not idle. If he could not reel the fish to the boat, he could reel the boat to the fish, and he did. Then calling upon the *amicus curiæ* to prod round in the weeds with an oar, after great efforts, got his line clear, and forced the fish to leave his retreat and strike out into the open water; but he was now well rested and full of fight. With the speed of a bird he rushed through the water, carrying out with him a hundred feet of line, and then he flung himself high out of water, and shook his head vigorously, seeking to tear loose from the restraining hook, but in vain. The Judge held him with a firm hand. He then turned himself about and rushed straight for the boat, and this unexpected manoeuvre nearly saved him. The sudden slackening of the line compassed the Judge, and he gazed about him in amazement. In a moment the fish came rushing past the boat, and then the Judge saw the trick, and went to work upon his reel with a vengeance. Fortunately for him the hook was deeply set, and the fish could not cast it out. However, he nearly parted the line when the end was reached, and he was brought to with a jerk. If he then went hunting round for a stump or snag to which he might fasten the line; but, failing to find one, he resorted to short lunges to break it, but it was strong, and held him. He then thought to throw himself upon the mercy of the court, and put his head above water for that purpose, but the stern ferocity of the Judge's face discouraged him, and he was dumb. He now gave himself up as lost, and struggled but feebly, and soon the Judge had him alongside, and he was easily taken in with the landing net, and was scheduled by the Judge among his net assets. The Judge had triumphed, and the victim of his skill lay an unresisting captive in the clutches of the law. No appeal, writ of error, or *habeas corpus* could help him, and he gracefully submitted to the inevitable. I have omitted to detail the various mishaps of the Judge on his side. I could tell how his line repeatedly got snarled on the reel, and bunched on the spool; how it got fouled on an oar; how he occasionally in his excitement ran the reel the wrong way; how he nearly broke the rod when he first struck the fish, etc.—but respect for my

own safety when I next appear before him constrains me to silence, *quoad hoc*.

I have a friend who is a skillful artist, and, having often derived great enjoyment from reading and seeing (especially seeing) illustrated fish stories in *Scribner's*, I asked him to prepare for me a first-class illustration of Judge M. fishing for bass; but, forgetting to read him my story, he has drawn largely upon his imagination, and the picture don't fit the story. If I had seen the picture before I told the story, I could easily have made the story fit it, as the cooper made a harrel around a bung-hole; but I don't want to write my story over, and besides, no such adventure as that depicted by the artist happened to the Judge, and I like to keep somewhere within sight of the truth when I am writing history. My hero certainly did not tumble upon his beam-ends in the attitude in which he appears in the picture; neither did the boatman tip over upon his hands and knees as if he were about to drink from a spring, while the Judge strove to lift him toward heaven with the hook set in his pants, and the bass stood upon his tail and laughed (the artist says he is laughing in the picture). Poetic license might perhaps permit me to say that this is an illustration of how the Judge caught his second fish, but I don't dare to, as I am compelled sometimes to go into his court room, and he has a healthy and vigorous bailiff who looks as though he would do almost anything the Judge should tell him to. I think you had better have the picture nicely framed in gilt, and hang it up in your sanctum, labelled "Bass," in honor of my Cincinnati friend. My artist friend goes fishing and hunting with me, and this season we have selected a new ground for a month in the woods, where we are assured black bass, trout and game abound, and if the place proves as fine as we have good reason to suppose it to be, I think we'll write you a letter from there with illustrations; and if the article or the illustrations prove too heavy for your columns you need not feel embarrassed, but just forward it to the *Edinburgh Review* with my compliments. I like the method which was adopted by the trout fisherman at the Rangeley lakes, of preserving the evidence of his big trout. You recollect he drew a picture of him on birch bark and sent it to *Scribner's* and had it published. Could anything be simpler or more convincing? If any one should be incredulous about its weighing nine pounds, all the fishermen had to do was to point to the picture and tell the man to note his length, breadth, etc. I propose to do the same thing. I shall take along the right kind of eye-glasses, and when I catch an extra large fish I shall have Jim (my artist) put on the glasses and draw him in birch bark, and then I shall send it to you. Birch bark is much better for this purpose than paper, as it bears upon its face an air of rustic, untutored honesty. You say at once, "There's no humbug about that. It comes straight from the woods where the fish was caught, and the fish was drawn from sight and not from memory." The bark is better as a convincer than an affidavit. It will be hard to heat with bass the Rangeley nine-pound brook trout, but if my artist does not "forget his cunning," and the bark holds out, I'll try hard to do it.

Chicago, Ill., June, 1878.

For Forest and Stream and Rod and Gun.
THE BEE TREE.

YEARS ago, when life was complete and nothing to think of only to plan for fun on the morrow, we one morning strolled into the log house of a friend, Joe B., in the back woods of Canada, and found him and his brother Mose and a settler, Phil C., preparing to start for the woods to cut a bee tree. A hearty invitation was extended to us to be one of the party, and Joe B. set off the fun we would have in his quaint, rattling way, till he, boy-like, was filled with excitement. "It's a real peeler now, I tell ye; one I lit on 'bout a year ago, aa' there's as much honey in it as would sweeten the tempers of all the old maids in the country. By Jinks, it's a buster!" Bee hunting is great sport, followed as it is in the most beautiful season of the year, and has been deemed worthy the attention of such writers as T. B. Thorp and Mrs. Kirkland. It is a fascinating amusement, and, in those who follow it, excites almost the spirit of gambling, the stake is so small as compared with the possible prize. It must be admitted that the temptation is great, when the small amount of labor required to cut down a half decayed bee tree is repaid by quantities of first rate honey, a luxury at any time and place.

There are various ways of finding bee trees; the most common way is by burning some comb and honey in some likely locality, to scent the air and attract the bees, and having a small quantity inclosed in a box with a glass top, the bees, if in the neighborhood, will soon be buzzing around and make for the box. The cover is then shut down, and the box closely watched till nearly loaded up; then the cover is carefully raised, a small pinch of flour sprinkled on the insect, and a note taken of the time. (This is done in order to distinguish this bee from the others who will likely return from the tree to the bait box with him, and the length of time elapsing during his trip determines the distance of the tree.) Presently the bee wings his way out of the box, the bee hunters throw themselves down, and, shading their eyes, watch the bee as he circles rapidly around, and then is off on a bee line for the

hive till he is lost to view. Patiently they wait, knowing well that the bee will lose no time, but return as soon as he can and in as straight a line as when he departed, and will likely be followed by three or four others, all of whom will, without any circling prelude, fly into the bait and proceed to load up. These bees will all be dusted with flour and the time again noted, as they may not all belong to one swarm.

The bee hunter watches them as they fly to and fro, and notices that they steer clear for a wooded ridge some distance off, and moves his bait-box toward it, keeping as near the bee line as possible. Back come the bees again; the box is moved nearer the ridge. The flour besprinkled bees make short trips now. The bait-box just buzzes with the "busy bee." The hunter is in raptures, moves closer and closer to the ridge, and, watching like a hawk, sees the bees enter a tree, generally high up the trunk. He goes nearer to fully satisfy himself and to judge of the size of the swarm, cuts his name or mark on the tree (the law of the woods makes it his), and at some convenient opportunity returns for the honey, which he gets, if Master Bruin, who has a very sweet tooth, has not been there first, in which case he finds nothing but a tree pretty well torn to pieces, and pieces of comb and dirty honey strewn about its base.

Mark Twain says the average bull-whacker is, in the matter of profanity, "gifted" beyond the sons of men, but in a case like this, I have listened to artists in this particular, it's a "stand-off" between the bull-whacker and the bee hunter.

Our friend Joe speaks of all such methods of bee hunting as I have attempted to describe with scorn, and, trusting solely to his trained senses, meets with good success.

"Come, now," said he, "don't keep me waiting; my mouth fairly waters for a taste of the sweetie," and, taking the trail down the river, we crossed the rapids and followed him to the tree.

The swarm was in a large bass-wood, high up from the ground, among the great limbs, and, to our unpracticed eyes, invisible. Joe, however, knew he was right; but, remembering Josh Billings' advice as to fooling with the "business end of a wasp," and knowing, from sad experience, that a bee is fully as vicious when he makes his mind up for attack, he made preparation for the fight. Putting on his heavy coat, he tied it snugly about the neck and wrists, drew his boots over his buckskin leggings, wrapped his head and face up with a thick veil, put on his leather gloves, then taking his axe commenced chopping vigorously.

Phil lit his pipe, and, as usual, began cracking jokes on the entire company. Mose found some dry leaves, bark and chips, and set them on fire, making a smudge to stupefy the bees, who would swarm out by the hundred when the tree fell.

Joe in the meantime had, with many an energetic blow, hacked the tree nearly through; the bees began to be alarmed, their leafy home to sway and tremble, which, with a crash, came thundering to the ground.

"Quick, Mose, give me the 'smudge!'" said Joe, running up and placing the smoking pile of chips directly under the hole from which the bees were issuing.

The effect of the smoke was apparent at once. The bees, in pouring out, passed through the smoke and blaze, and numbers of them with scorched wings and dizzy heads fell to the ground.

Joe mounted the log and began to make a cut a foot or two beyond the hole. The bees that were uninjured were flying about him; but used to such work, he continued chopping, heedless of their presence, till suddenly he dropped his axe, sprang from the log, tore his coat off, and with a yell of pain exclaimed, "Heavens! boys, I'm bit; there's a whole beehive down my back!" and charging around wild through the underbrush, he made us all laugh so we could hardly render him any assistance. Finally, however, we secured the one bee that had made all this tumult, and putting on his armor again, he proceeded with his chopping. Making two cuts half through the tree on each side of the hole, he split the block out, and there, neatly stowed away, was the long roll of honey.

"Young swarm," observed Joe, as he broke off the clear, rich flakes of comb and laid them carefully in the pails, "see how white it is!"

We did see. Furthermore we tasted the honey and found it superb, differing slightly in taste from the honey made in the settlements from garden flowers and clover; but to us just then the difference was in favor of the wild article.

"Condemn the little sharp-pointed rascals; I'll take my revenge now for the nip they give me," quoth Joe, taking a seat, with a flake of honey in one hand and a "bunk" of bread in the other. "Tain't bad to take, is it, boys?"

The good old fellow presented a highly satisfied, as well as ludicrous, picture, as he sat perched, bare-headed, on a log, the honey streaming down his thick beard and his little black eyes twinkling with good humor.

Phil, who is a restless mortal, and never so happy as when playing practical jokes, determined to put a stop to Joe's feast, and, stealing softly up behind him, gave him a sharp prick with a pin. Dropping his bread with a yell, Joe sprang from his perch, amid a roar of laughter, and wildly blaming Phil for his fright (for he supposed another "bee-hive was down his back"), he threw his honey at him with his usual good aim and struck him fairly in the mouth. Phil had not bargained for any such return, and made a rush for him, but Joe, snatching up two handfuls of honey, threatened to anoint him from head to foot if he came any nearer. Reckless Phil, who never yet stopped to calculate chances, closed with him at once, getting the second installment of honey where he did the first, and a friendly rough-and-tumble muss came off there and then, Joe getting his antagonist under in a few seconds, when he "gave it to him" at his leisure, smearing his face and head with the "sweetie" till he could scarcely cry enough. When the affair was over two more dirty men it were hard to find. Smeared all over with honey, dirt, leaves and moss sticking to them as they stood panting and "jawing" each other, a "douse" in the brook near by made them a little more like their natural selves, and, filling our pails, we all took a bee-line for the village.

HAWLAND.

"SPORT AND THE DRAMA."—It is significant that we have journals devoted to "sport and the drama," where we may find the points of Clara Morris discussed in one paragraph, while the next waxen eloquent over the charms of Lady Suffolk, or whatever else the crack inane of the day may be called. Edwin Booth and Budd Doble are mentioned in the same breath. It is very much like hauging Titian's "Ascension" beside the latest sensational wood-cut in the *Police News*. So prominent has this feature of the drama become that many of our best people have considered it a sign of vulgarity to show an interest in dramatic affairs.—*Atlantic Monthly*.

THE U. S. FISH COMMISSION IN GLOUCESTER.

ALTHOUGH the *Speedwell* has not yet entered upon the work of dredging and trawling, some valuable additions have already been made to the National Museum collections. These are due mainly to the good will of Gloucester fishermen, who deserve credit for their zeal and efficiency in advancing our knowledge of the creatures of the sea. More than one museum possesses choice specimens which will prove a lasting tribute to the Gloucestermen who presented them. The famous *Alepidosaurus* and the new *Chimara* (*C. plumbea*, Gill) are a portion of such treasures, and we now have to record some equally interesting captures. Inasmuch as the first arrival was not fish, but fowl, we will begin with

THE SKUA OR JAEGER, *Stereorarius skua*.

This bird, which was about to soar beyond the pale of American ornithology, returns to establish the veracity of early writers. A Gloucester fisherman—Capt. Daniel Carroll—captured it on Georges Bank early in July by means of a fish hook. Its wings were clipped, and it was kept on board a schooner for eight days. For a time it could not stand erect, but gradually it "got its sen legs on" and stalked the deck as a mighty jaeger of old might have trod the forest. After safely reaching the port of Gloucester, this unfortunate captive had to run the gauntlet of a mob of unappreciative small boys, who finally realized their fondest hopes in his death and consignment to the element from which he came. As if to make the most of himself even in his cadaverous condition, he floated under the wharf assigned to the Fish Commission, whence he was quickly taken and prepared for the National Museum collection, in which he will undoubtedly acquire the title and perquisites of a *skua redivivus*.

Another chimera has been added to the catalogue—

Chimara plumbea, GILL.

This individual was presented by Capt. Jos. W. Collins, schooner *Marion*, of Gloucester. It is an adult female. There is a short caudal filament. The color is not "uniformly plumbeous," as in the type specimen. The ground color is a purplish brown, and there are mottlings of red, white, blue and brown. Capt. Collins states that the animal was caught on a trawl line, at a depth of 275 fathoms, thirty miles south-east by south of the eastern light of Sable Island. Three specimens of the species are now recorded in museums—one male in the Boston Society of Natural History and two females in the U. S. National Museum. Capt. Collins brought in also a

GRENADIER, *Macrurus rupestris*, BLOCH.

The readers of FOREST AND STREAM have already learned through its columns of the occurrence of this species floating at sea near Gravesend, Long Island. Mr. J. F. Whiteaves collected the same species in the Gulf of St. Lawrence. Ours is, therefore, one of three known specimens. The Gravesend specimen was presented to the National Museum by Mr. E. G. Blackford. Fishermen state that the grenadier is common and is often taken on the trawl lines. The chimera is seen occasionally, according to the same authority.

The National Museum is indebted also to Mr. Philip Merchant, of the schooner already referred to, for some very choice

CORALS

belonging to the genera *Mopsia* and *Isis*, the names giving no clue to their gracefulness and beauty, to say nothing of their rarity.

The Commission has good prospects of making valuable collections during the summer. Since the above was written a male *Chimara plumbea* has been received, and a specimen of *Alepidosaurus ferox*, both presented by Mr. Thomas Burns, of Gloucester.

TARLETON H. BEAN.

THE CAPELIN MOVING SOUTH.

MR. EDITOR: A very curious incident of the change of range in marine fishes is that of the capelin (*Mallotus villosus*, Cuv. and Val.) making its appearance this summer in some abundance in the harbor of Halifax, and various parts of the neighboring coast. For many years not a specimen has been observed south of Cape Breton, and for scientific purposes we have always had to procure examples from Newfoundland. As this fish is considered an arctic form, loving the colder waters of the boreal regions, it would be interesting to know the cause of its sudden and unusual appearance so far south of its accustomed limits. One fact is worthy of mention, as it may throw some light upon the question—viz., the abnormal condition of our shore waters at the present time, which are remarkable for coldness at a season when we usually find a high temperature, showing evidence of the divergence westwardly of the cold northern current which passes our coast, flowing south. Singular to relate, the salmon appears to feed upon the capelin, for I am assured by a friend, who is a very accurate observer, that he procured two last week from the stomach of a salmon caught off the harbor.

As the capelin may not be generally known to the readers of FOREST AND STREAM, I append a brief description of an example from Newfoundland, submitted to me for examination some few years ago, should you think it worth inserting:

D. 13-A. 22-P. 18-V. 8.

Body elongate, compressed; extent, 7 inches. Scales small; lateral line straightened to the region of the anal, where it bends upward to the caudal bone. Eyes large, diameter, 3½ lines. Nostrils double, horizontal, having the posterior cavity 1½ lines from the ocular margin. Mouth small; vertical gape, 5 lines; horizontal gape, 3 lines; the lower jaw longest; width above eyes, across occiput, 3 lines; depth immediately in front of anal, 10 lines; at caudal base, 4 lines; width of body immediately in advance of dorsal, 6 lines; extent from point of lower jaw to posterior margin of opercles, 1 inch 4 lines; from frontal extreme to base of occipital cleft, 10 lines. Upper and lower jaws armed with sharp, conical teeth, bending inwards, extending on the former to the base of the maxillaries. A row of similar teeth on either side of the palate. Head compressed, attenuate; facial outline, declivous; at upper angle of operculum arises a filamentous, fin-like process, which runs parallel with and immediately above the lateral line to

the caudal base, the mass partaking of the character of sac-cid fringe.

The dorsal commences 3 in. 3½ lines from frontal extreme, and has its first ray longest, 8 lines; last ray shortest, 4½ lines. Basal extent, 6½ lines.

Pectoral fins flabelliform, commencing immediately behind the lower angle of the opercles, 6 lines beneath the dorsal ridge. Basal extent, 4½ lines; twelfth ray longest, 8½ lines; expanse, 6½ lines.

Ventrals commence in a line with the dorsal; the sixth ray longest, 8½ lines; basal extent, 3½ lines; expanse, 10 lines.

The anal commences in a line midway between the dorsal and adipose fins, having its fifth ray longest, 5½ lines. Basal extent, 7½ lines.

Caudal forked; lobes equal, 9½ lines extent; cleft, 3½ lines; expanse, 8½ lines.

Adipose fin commences 9½ lines behind dorsal. Basal extent, 3½ lines.

Color—Whole upper part (including head) from the region of the lateral line, olive green, fading into silvery pearl beneath; the opercles dotted with dark spots, and the whole body under the lens more or less covered with dark specks. The whole fish shines with metallic lustre. Cheeks and gill covers silvery; dus transparent.

J. MATTHEW JONES.

Halifax, N. S., July 15, 1878.

ARTIFICIAL HATCHING OF THE CUNNER.—We thank the Secretary of the Smithsonian for the following interesting letter in regard to the hatching of the eggs of the cunner, which has been accomplished by Mr. C. G. Atkins. The letter is written from Bucksport, Me., July 20, and is addressed to Prof. S. F. Baird, U. S. Commissioner of Fish and Fisheries:

While at Georgetown I came upon a pair of spawning cunners (*Tautoglabrus*), and hatched out a few dozen of their eggs. I find that the eggs are about one-half millimeter in diameter, having increased very slightly, if any, after coming from the fish; are exceedingly transparent, perfectly free, adhering neither to each other nor to any other object at any time; they are slightly buoyant in sea water, and slowly rise to the surface, where, if in still water, they remain suspended until hatched. Both impregnated and unimpregnated eggs rise at first, but after the lapse of a few hours the unimpregnated lose their buoyancy and sink to the bottom. The yolk is more buoyant than the outer shell and rises to the upper side of the latter, which it very readily fills. The embryonic disk forms on the lower side of the yolk. I kept my eggs in vials in my tent, renewing the water from time to time, and think the average temperature maintained was 60 deg. Fahrenheit; possibly a little higher. Under these circumstances the eggs hatched in three days. In the natural place of deposit the water is undoubtedly considerably colder, possibly 10 deg., and the eggs would then be four or five days in hatching.

CHARLES G. ATKINS.

MOVEMENTS OF EELS.—Salem, Mass., July 23.—Mr. Editor: I am three weeks behind in reading your interesting journal, having been absent. Have just returned from salmon fishing the Nepisiquit. Your correspondents on eels call to mind what I saw while fishing one of the pools at Payoncan Falls. My guide called my attention to the vast numbers of small eels trying to mount the rapids at the head of the pool, some actually clinging to, others wriggling up the perpendicular face of the rock. The advance guard would slime the dry rock as far as their material would last, then wait for the rear to pass, and so on until it was smooth going, and then a grand rush. The whole movement was an entire success, and if they were not trying to reach the headwaters, I think they were taking a great deal of pains to no purpose. I doubt if they were merely trying the experiment to see what they could do or playing follow master.

C. T. J.

RESTOCKING LAKE GEORGE.—A meeting was held at Black Mountain Point, on Lake George, last Saturday, to organize an association for the purpose of stocking Lake George with fish, and improving the lake and its surroundings generally. Dr. J. W. Dowling, of New York City, acted as chairman, and Cyrus Butler as secretary. Speeches were made by the Rev. Drs. Gillette, Tuttle, Butler and Huntington, and Messrs. Roessle, Crosby, Hayden, Verplanck, Colvin and Cyrus Butler. The lake will be stocked without delay under the auspices of Seth Green.

Natural History.

A MOLLUSK ON ITS TRAVELS.

THE problem of the distribution of fresh-water fishes and shells is one of the most intricate of those to which the zoologist has to give his attention, and the evidence which bears on this point is as yet somewhat unsatisfactory. Mr. A. R. Wallace, in his great work on "The Geographical Distribution of Animals," has discussed this subject at some length and with his usual ability; but he acknowledges that, so far as observations go, we are not furnished with many facts from which to draw definite conclusions.

The fact that the same species of fresh-water fish are frequently found in rivers and lakes which have absolutely no connection with each other proves conclusively that they have some means of dispersal over the land, and Mr. Wallace regards waterspouts, whirlwinds, etc., which often carry up into the air considerable quantities of water, and which might easily take up small fish also, as one of these means. This view is confirmed by the many trustworthy accounts which we have of showers of fish falling in heavy rains. Humboldt states that, in South America, the fish inhabiting subterranean streams are sometimes thrown up during these outbursts. But fish may also be distributed by means of their eggs being transported from place to place through the agency of other animals. Ducks and geese feed largely on the eggs of fish, when they can obtain them, and it is stated by Gmelin that some of these eggs pass through their bodies with their vitality unimpaired. If these birds were migrating at the time it is evident that such eggs might serve to stock bodies

of water at a long distance from the locality where they were deposited. Besides this, eggs may be transported by becoming attached to the legs, feet or bill of aquatic birds.

The chief method of the dispersal of land and fresh-water shells is, as Mr. Darwin has so admirably shown in his Origin of Species, through the agency of aquatic birds which frequent ponds and marshes. He says: "I suspended a duck's feet in an aquarium, where many ova of fresh-water shells were hatching; and I found that numbers of the extremely minute and just hatched shells crawled on the feet, and clung to them so firmly that, when taken out of the water, they could not be jarred off, though at a somewhat more advanced age they would voluntarily drop off. These just-hatched mollusks, though aquatic in their nature, survived on the duck's feet, in damp air, from twelve to twenty hours; and in this length of time a duck or heron might fly at least six or seven hundred miles, and, if blown across the sea to an oceanic island or other distant point, would be sure to alight on a pool or rivulet." Mr. Darwin also gives an instance of the capture of a water beetle with an *Aneides* (a fresh-water shell like a limpet) adhering to it.

Such means as those enumerated would then seem amply sufficient, with time, to effect a very widespread distribution of fresh-water shells. Land shells present more difficult conditions, but we must for the present pass them by.

It will interest our readers to learn that Mr. Arthur F. Gray, a frequent contributor to the columns of FOREST AND STREAM, has recently communicated to Mr. Darwin a fact of great interest bearing on the geographical distribution of mollusks. His letter, with the recipient's comments on it, has been printed in *Nature*, accompanied by a sketch showing a *Unio* clinging to the extremity of the middle toe of a duck's foot. Mr. Gray's letter was as follows:

"Dear Sir: The following case will, I think, prove of interest to you, as it corroborates your belief that fresh-water shells are sometimes transplanted by the agency of aquatic birds.

"In the sketch I have endeavored to give you a correct idea of the way in which the shell was attached to the duck's foot.

"It was given to me by Mr. R. L. Newcomb, who shot the bird, which was a blue-winged teal (*Querquedula discors*), while flying near Antiochke River at West Newbury, Mass., September 6, 1877. The shell, the common mussel or clam (*Unio complanatus*), is a very abundant species, being found in nearly all the rivers and ponds of the Atlantic slope. How long the shell had been attached is only a matter of conjecture, but it had abraded the skin of the bird's toe, and left quite an impression. It was living when the bird was shot.

"It would undoubtedly have been transplanted to some pond or river, perhaps miles from its original home, had the bird not been shot, and might then have propagated its kind.

"Davenport, Mass., May 8. ARTHUR F. GRAY.

"To C. Darwin, Esq."

We take great pleasure in offering our congratulations to Mr. Gray on this extremely important observation.

NOTES ON FAMILIAR BIRDS.

EDITOR FOREST AND STREAM:

Jan. 19.—Noticed a flock of twenty or more horned larks (*E. alpestris*). The largest number I have observed at one time.

Feb. 12.—Shot female purple finch (*C. purpureus*).

Feb. 14.—Saw another purple finch, but failed to secure her. These are the only ones I have observed about the house in winter.

Feb. 28.—Observed four robins (*T. migratorius*) flying over.

March 1.—Blue birds (*S. sialis*) in flocks. Saw purple grackles (*Q. purpureus*) in flocks in the yards. We have a number of evergreens in the yards and one or two pairs of grackles nest in them every year. The robins and grackles often have fierce battles, chasing each other around the yard.

March 7.—One flock of pigeons (*E. migratorius*) seen.

March 8.—Song sparrow (*M. melodia*); Phoebe (*S. fuscus*), gull supposed to be Bonaparte's (*L. philadelphia*), as I have one in my collection which was shot on the Chemung River near the city.

April 2.—A friend, who is in the woods much of the time, reports having found two ruffed grouse nests, one with eleven and the other thirteen eggs.

April 9.—Robin building her nest in a tree just in front of my window.

April 12.—Golden-winged woodpecker (*C. auratus*) observed to-day.

April 14.—Belted kingfisher (*C. alcyon*).

April 24.—Indigo bird (*C. cyanus*).

May 2.—Yellow warbler (*D. aestiva*).

May 3.—Male Baltimore oriole (*I. baltimore*).

May 8.—Black-billed cuckoo (*C. erythrophthalmus*).

May 20.—Black-poll warbler (*D. striata*).

The habits of the purple finch (*C. purpureus*) are quite interesting. The male is a handsome, pugnacious bird, and one of much vocal power. There are some six or eight in the yard every morning, and such a delightful concert as they give! Each one giving his best efforts in song and display of bright plumage to win the affections of the demure female, who sits on a limb viewing them with distrust, since the concert often ends in a battle. What I admire most is their habit of every little while rising in the air to the height of fifty or sixty feet, then, setting their wings, they sail down, pouring out a perfect flood of song, and alighting on the top of an evergreen. They are very cute in hiding their nests. Of four now under my observation, every one is among the short, thick branches of an evergreen, and cannot be seen at all from the ground. The nests are built of twigs of the evergreen for the foundation, then grass and horse-hair, and in the bottom of one was a nice bed of cow's-hair. The eggs are five in number, green, with blotches of brown at the large end, and on some eggs there are a few spots all over. Wilson says of the birds: "They are soon reconciled to confinement, and in a day or two are quite tame."

Elmira, N. Y. E. B. GLEASON.

THE AMPHIOXUS LANCEOLATUS OFF OLD POINT COMFORT.—Mr. H. J. Rice, of the Hopkins University, now engaged in research at the Chesapeake Zoological Laboratory, Fort

Wool, near Old Point Comfort, Va., writes us thus glowingly of a new find, under date of July 19:

On the 9th of this month I was fortunate enough to find a specimen of *Amphioxus lanceolatus* in the first dredgeful of material which we dredged from the bay here. The next day another one of our party found another specimen, and yesterday, 18th, I found a third specimen. I have them as I write before me in a bowl of sea water with sand at the bottom. They are all alive and doing nicely. This is the farthest north *Amphioxus* has ever been discovered along the coast of the United States. It has been found in Florida, and also along the southern part of the coast of North Carolina, and, I think, nowhere else, until these specimens were taken here. They must be very scarce here, though, as we have made a great many dredges for them, but have not succeeded in finding any but the three specimens. They are wonderfully active little beasts, flashing out of the sand when stirred up, through the water and back again, burrowing into the sand so quickly that they can be said to be there only by the dust they kick up. That is a good deal like some people, is it not? However, I don't mean to compare *Amphioxus* to them in any other respect. *Amphioxus* is a very valuable little body. If you are inclined to doubt, ask Mr. Darwin. I have been trying to get *Amphioxus* to consent to be interviewed, but he, or she, is a bashful beast and declines with compliments, or something to that effect, since whenever I have got him under the microscope, and thought I was going to get along nicely with him, he has thrown himself out of the dish on to the table, and even tried to get down upon the floor. If a desire to be lowly is a characteristic of the *Amphioxus* family it is a pity that it did not stick to some of the evolved families of higher vertebrates. We have also found quite a number of specimens of *Lingula*, which is also a rarity. We are finding a goodly number of *Hydroids*, *Discophora* and *Ctenophora*, and perhaps some new ones. We are pretty well satisfied with our work here thus far, and are exceedingly well pleased with the place as a summer resort in the "hot country."

CAUGHT AT SEA.—We acknowledge from Lieutenant Commander R. D. Evans, U. S. N., a Carolina rail, which was captured at sea. The bird we have put in a cage, and he seems not much the worse for his long journey. Like all the *Rallidae*, however, he does not take to a perch very comfortably, crossing his legs awkwardly on the cross-piece. We have been feeding him on canary and rape seed. Should we think that the bird is pining we will set him free on the salt meadows near the city, so that he shall have a good chance for life. The following letter is from Lieutenant Commander Evans:

U. S. S. "SARATOGA," NEWPORT, R. I., July 28.
EDITOR FOREST AND STREAM: I beg the liberty of sending you a rail, which flew on board my ship three hundred and fifty miles from the Cape of Virginia during a heavy westerly blow on Tuesday last. He struck the rigging and fell to the deck, and although used up, was still able to run. I at once made him comfortable, and now present him to you, with the hope that you will accept him, and either care for him yourself or give him a fair wind to some sang harbor.
R. D. EVANS, Lieut. Commander, Commanding.

A CURIOUS CASE OF NESTING.—Editor *Forest and Stream*: I send you the following curious case of nesting, with the assurance that the facts came under my personal knowledge. A hole large enough to admit a man's hand had been knocked in the siding of a passenger car, which leaves this town at 7:30 A. M., and returns at 4 P. M. six days of the week, and in this hole, back against the foot of a brace, a bluebird started to build her nest, working in the early morning and evening after the train was side-tracked. The men were much interested in the performance, and all hands were on the look-out when the car came in for their little lodger, who was usually on a pear tree or on the telegraph wire, ready to go on with the work. When nearly finished, this was torn out by some precious coward; but the bird was not discouraged, and in a little while a new one was under way. Finally, one egg appeared, but the number was not increased, so that when the poor youngster broke his shell yesterday morning, he was an only child and a temporary orphan, exposed to the tender mercies of three or four vigorous wet nurses, under whose ministrations he swallowed sundry grasshoppers; but either the quantity or quality of this first meal disagreed with him, for when his mother flew up as the car stopped, the little one was dead. From all that I can learn, I am convinced that the bird has never followed the car, so that the egg may be said to have been artificially hatched, the mother protecting it from the night air only, excepting on Sundays, when she was constant in her attentions.
Grand Tower, Ill., July 18, 1878.

THE HIBERNATION OF SWALLOWS.—There is an interesting communication in the *Ornithologisches Centralblatt* of May, from Herr J. Rohweder, under the head of "Ornithological Notes from Schleswig-Holstein." Herr Rohweder certifies to the competency and trustworthiness of the observer who communicated the facts to him. After the house swallows (*Hirundo urbica*) in the autumn of 1870, from the beginning to the middle of September, had held their usual assemblies by hundreds on the sunny side of the roofs, stormy and rainy cold weather suddenly supervened. As suddenly did most of the swallows take their departure for the south. The few that remained behind flew about restlessly and anxiously, unable in the cold north wind to obtain sufficient insects to appease their hunger. Within a day after the others these also disappeared. Three days after, during which time no swallow was observed, Herr Rohweder's informant saw peeping out of the entrance of some nests, under the projecting roof of the east side of his house, here a wing, there a tail or a few feathers. A ladder was obtained and the nests tapped, but no motion. On pulling at one of the overhanging wings a swallow was dragged out. It was alive, but seemed paralyzed. After the swallow was held in the hand a while it fluttered about a short space and then fell to the earth. A second bird behaved in the same way, and a third showed few signs of life. A fourth appeared quite lifeless. In other nests six and ten, and even fourteen swallows were found buddled together. Their condition was similar to those first found. The birds near the entrance of the nest appeared in a state of sound sleep, while those further in showed no signs of life. The former soon were able to fly, with difficulty, a larger or shorter round, only one flying to a considerable distance; the latter were thrown on a neighboring heap of straw. On the following day, when the observer returned, no birds were found. The exact locality of these observations is not given.—*Nature*.

FIRST DREDGING EXPEDITION OF THE SPEEDWELL.—On Tuesday of last week, the *Speedwell*, Commander Beardslee in charge, made the first dredging expedition, Professor Baird being on board. The vessel steamed out some fifteen miles from Gloucester, Mass., and dredged in some forty-five fathoms. Sea anemones, with starfish, shrimps, shells, etc., were brought to the surface. A peculiar anemone, common to European waters, but rare here, was found. The *Ocotopus bairdii* rewarded the explorers on their first expedition.

—We call our readers' particular attention to the advertisement of the old firm of Messrs. Dodd, Mead & Co., 751 Broadway, who make a specialty of works in natural history. They solicit correspondence with libraries, reading clubs, and book buyers generally.

Woodland, Farm and Garden.

THIS DEPARTMENT IS EDITED BY W. J. DAVISON, SEC. N. Y. HORTICULTURAL SOCIETY.

For *Forest and Stream* and *Road and Gun*,
HARDY FLOWERS.

THE emblazonry of "bedding" plants as *Pelargoniums*, *Coleuses* and the like are now the main decoration of most gardens, and though such gaudy paraphernalia, when moderately used and properly disposed, are becoming enough alone, they are poor furniture for a garden. We want a variety of flowers at all seasons—something hardy, profuse and showy, and that will yield us abundance of blossoms for vase and other bouquets. Though May and June are the hey-day of hardy plants in blossom, we have also a multitudinous assortment from that time till October.

Just now (the middle of July) the Japanese white lilies (*Lilium longiflorum*) and its beautiful variety *Takesima* are in perfection. *Pentstemon barbatus* has long, wind-like stems, laden with orange-scarlet flowers. Many kinds of *Speedwell* are neatly clad in blue, and of Bell flowers there is quite an assortment, from the tiny *Campanula crepitosa* to the cushion-like *C. carpatia* and the European hurchell. Their prevailing color is blue, but there are also white varieties of most of the species. Allied to the bell flowers are *Platycodon grandiflorum*, blue and white, and one of the finest perennials of its season; also the Siberian *Adeuphora*, with pretty little bells, *Delphinium grandiflorum* has intense blue flowers and a branching habit, and is invaluable for cutting. If perennial Larkspurs are cut over just as soon as their flowers are shed, a second crop may be expected in fall. *Aconitum variegatum*, blue and white variegated, is coming into bloom and is the best of its class. *Clematis Davidiana*, a "new" herbaceous species from N. China, has crowded blue flowers somewhat like those of single hyacinths, and very fragrant. Of evening primroses, *Oenothera Missouriensis*, large and yellow, fruticosa var. *linearis*, small yellow, and speciosa, white, are among the finest; but they have also a host of auxiliaries that are brilliant and beautiful, and they are gay from late afternoon till early forenoon than during the daytime; hence their name. *Phloxes* are blossoming out in great variety, presenting all shades of color from white to pink and purple, and lovely flowers they are. Our bee balm, *Monarda didyma*, has very showy heads of scarlet and crimson, and is a very desirable plant. To keep it vigorous, transplant it every second year. *Hollyhocks* are in their glory, and what can be finer than the brilliantly-colored full double sorts? Transplant them every second year, and keep up a young stock from slips and seed. Perennial mullows (*Calliope*) of our western and southwestern prairies have brightly colored rose-purple flowers, and are very profuse and pretty. Blue day-lilies (*Funkia*) are bursting into blossom in the open border, and better still in shady places, where, too, the saffron day-lily (*Ilcmecocalis*) is in perfection, and most at home. The pink-root (*Spigelia marilandica*) is a neat little herb with red blooms, and *Stokesia caryocarpa* of the Southern States is copiously beset in blue. It is not usually considered hardy, but it is hardy enough with us, and that on a clay soil too. And nothing is gayer at present than the musk mallow (*Malope moschata*), rose and white. And when we enter the composite family, almost an endless variety of yellow flowers present themselves. They include perennial kinds of *Coreopsis* *Rudbeckia* and *Gaillardia* brighter and better, if possible, than the annuals of the same genera. And there is a great variety, too, of *Pyrethrum*, *Achillea*, *Anthemides*, etc.; indeed, *Anthemides tinctoria*, bright yellow, is one of the finest of hardy herbaceous plants. Among stoneworts we have *Sedum album*, white, spurious, and pulchellum pink, and all neat, little and copious kill-not plants that will grow in ground so dry that most other plants would perish in it. *Verbena aubletia*, and its variety *montana*, are perfectly hardy, compact, and profuse in purple blossoms. The everlasting peas (than the white variety of *Lathyrus latifolius*, few tropical flowers are prettier) are in perfection, either sprawling along the ground or supported on trellises or stakes.

In addition to these we have also a great variety of seasonable, hardy flowers, such as *Lysimachia clethroides*, yellow *Columbines*, *Betonias*, *Sages* of many kinds, *Scabious*, *Pinks*, *Meadow-rue*, and several others. With annuals, too, our gardens may be abaze; but though excellent for mixed borders, only a very few of them are worthy a place in choice flower-beds. This is not because they are not pretty enough, but on account of the brevity of their existence. The late storm knocked *Nemophilas* and *Collinsias* all to pieces, so now they are past. Among the finest annuals, also perennials treated as annuals, at present in perfection, are *Eschscholtzia*, *Mignonette*, *Coreopsis* of sorts, *Petunias*, *Salpiglossis*, *Schizanthus*, *Drummond's phlox*, *Convolvulus tricolor*, and *Morling glories*, *Gilia densiflora*, *capitata* and *achillaeifolia*, *Malva congesta*, *Coccyzus heliotropoides*, *Gaura Lindheimeri*, *Candytuft*, *Balsams*, *Browallias*, *Australian everlasting* (except *Helipterum Mangles*, which is past), *Tugetis signata*, *pumila*, *Godetia grandiflora*, *Marigolds*, dwarf *Lupines*, *Clarkias*, *Wahlebergia gracilis*, *Campanula Loreyi*, *Malope nivalis*, *Didiscus cornutus*, *Nasturtiums*, *Brachycome hybridifolia*, *Dimorphothe capivialis* (russel flower), *Catch-fly*, *Sweet peas* and many more. It is worthy of note that annuals sown where they are to remain, and thinned well after germination, and those sown in boxes or frames and "pricked out" once before transplanting permanently, grow better. Live longer, and blossom more copiously than those nursed in pots. Again, our "tender" annuals, if sown in May or as soon as the ground

is warm enough for speedy germination, become finer in after life than hot-house gaspers. And another curious fact is that if the seeds of tender annuals, like balsams, be sown out of doors in March or early April, they will rot rather than germinate on account of the coldness of the ground; while, on the other hand, if the Balsams, Browallias, etc., were allowed to ripen and scatter their seeds last year, those seeds will, after lying in the ground all winter, germinate freely this year.

Besides with the above, our gardens are also gay with lovely Clematises and Honeysuckles, Trumpet flowers, and the second crop of Wistaria blossoms, and from the first to the middle of July is the hay-day of the prairie rose, with its great profusion of clustered corymbs, after other roses are mostly all past. The Catalpas are in bloom, and so are Rhododendron maximum, *Æsculus paryiflora*, Smoke-tree, *Ligustrum ovalifolium*, Bladder-sennas, *Spiræa Douglasii*, callosa, and *Fortunei* *Ceanothus Americanus*, etc. *Calluna vulgaris*, the European heather, is coming into bloom and will last through August, and so is *Erica vagans*, also an Old World heather. And with all these beautiful July flowering plants, which any cottager can have and grow to perfection without a glass frame or a hot house, what need have we of such gaudy masses of *Pelargoniums* and other tropical and semi-tropical coloring?

W. FALCONER.

Cambridge Bot. Gardens, Boston, Mass.

TREATMENT OF THE DROWNED.

WE presume that every one who reads this has more than once before seen directions of a like nature. Not one in a hundred, however, is a bit the wiser for what he has read. In an emergency he would not know how to proceed. We republish the following very excellent directions, taken from the *Scientific American*, and cannot too strongly urge our readers to thoroughly master the method. This cannot be done by merely reading this. The proper manipulation should be learned by practical experiments. Let one individual assume the role of a drowned person while another goes through the operation here described. Parents should instruct their children, and teachers their pupils. The process should be so familiar that when the occasion comes there may be intelligent treatment of the patient:

RULE I. (Fig. 1.)—To Drain and Force Water from the Lungs and Stomach.—Instantly place patient face downward, a hard roll of clothing being placed beneath the pit of the stomach, to raise it as much as possible above the level of the mouth. Put one wrist of the patient under his forehead to raise his mouth off the ground. With hands well spread upon the patient's back, above the roll of clothing, throw upon it your whole weight with a forward motion, and keep up the pressure about three seconds, so as to force all water from the stomach and lungs out of the mouth, ending the pressure

FIG 1

with a push which will help to jerk you back to your upright position. Repeat this once or twice, and then quickly proceed with—

RULE II. (Fig. 2.)—To Make the Patient Breathe.—Turn the patient face upward, the same roll of clothing being now beneath his back, the shoulders slightly drooping over it. Bend head backward and downward, putting throat on the stretch to the utmost. Place the bands of the patient on top of his head (one twist of a handkerchief or string around the crossed wrists will keep them there). Rip or strip all clothing from waist and neck. Now kneel astride the patient's hips. Grasp the front part of the chest on both sides of the pit of the stomach, your thumbs pointing to patient's chin, and your fingers fitting into the grooves between the short ribs. Fix your elbows firmly, making them one with your sides and hips, and then, firmly pressing the sides of the patient together, and using your knees as a pivot, throw yourself slowly forward for two or three seconds until your face almost touches the face of your patient, and your whole weight presses upon his chest. End this pressure with a short push which suddenly jerks you back again to the upright kneeling position.

FIG 2

Rest three seconds while the ribs spring back; then repeat this bellows-blowing movement as before, gradually increasing the rate from seven to ten times a minute; but take the utmost care, on the occurrence of a natural gasp, not to interrupt it; but, as the ribs fall, gently press them and deepen the gasp into a longer breath. Continue this until the natural breathing, which you are imitating, needs no further assist-

ance. If all fails, keep on, because any moment within an hour's effort you may unexpectedly be rewarded with success.

Avoid impatient vertical pushes; the force must be upward and inward, increased gradually from zero to the maximum the age, sex, etc., may indicate.

If a second person be present and can do it, the tongue should be held out of one corner of the mouth by the thumb and finger, armed with a piece of dry cotton or linen rag (Fig. 2 a).

We take our illustrations from the London *Lancet*.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, signs of suffering, etc.

SPAYING.

SO many queries have been addressed us of late in regard to spaying, that we think it advisable to make an abstract of an article on this subject, published last year in this paper, and due to our correspondent "South Fork." A distinguished surgeon, who has kindly given us advice in regard to spaying, tells us that the operation had better be performed by a professional man. People not used to the anatomy of a dog might commit some fatal errors. Comparative surgery might be tried, and it would not be unwise for those wishing to spay a bitch to practice first on a dead animal. This advice is also given us, that the operator's hands be warmed in hot water, then dipped into a solution of carbolic acid (one part to forty of water), before entering the cavity of the abdomen; also that cat-gut ligatures prepared in carbolic oil be used in place of silk ligatures, and thus there would be less liability to subsequent suppuration. The puppies should be operated on before being weaned:

First, the pup should fast for several hours before the operation, and be from about four to six weeks old. The only instruments needed are a scalpel or sharp knife, a pair of scissors, some threads of surgeon's silk, a soft sponge, and some ether to render the animal insensible to pain during the operation, which should be performed in a warm room as nearly the temperature of the animal as possible, as the exposure of the bowels to the cold atmosphere renders the liability of inflammation (peritonitis) following more probable. The patient is now placed on a small table, and with the aid of an assistant the ether may be administered by pouring a couple of teaspoonfuls on a folded napkin and holding it over the nose in much the same manner as though the patient were a human being. A few minutes will suffice to effect unconsciousness. The animal will now be placed upon its back, and an incision be made along the little groove in the middle of the belly (*Linea alba*) from the navel, extending backward an inch and a half to two inches toward the crotch. There will be no bleeding worth speaking of, as no blood-vessels cross the middle line of the abdomen.

The operator will, after cutting into the abdomen, place the animal's head pointing toward his chest for convenience. The first object seen after opening carefully into the abdominal cavity will be the bladder, which will easily be recognized, and a little gentle pressure upon it will expel the fluid from it through a natural channel, and enable the operator to more readily search for the womb. A few folds of the intestines may now be drawn out to one side to give more room to work. The womb must now be sought for immediately beneath the bladder, which will be found to be a very small, tortuous and cord-like organ, lying transversely and crescentically beneath the bladder, and to the inexperienced operator looks like part of the intestine. When the womb is found, draw it up gently and follow its course transversely to its extremity at one side of the abdomen, and there will be found a little hardish nodular body, about the size of a flattened garden pea, resting like a little knob on the lateral extremity of womb as it were. This is one of the ovaries, and is one of the two similar organs to be removed in spaying. Now put a silk thread around its pedicle, or base, tie tightly, and cut the thread close to the knot, and then remove the ovary with the scissors close to the ligature. Now follow back the tortuous comb till the opposite side is reached, when the other ovary will be found, which is to be removed also in the manner just described. The opening in the abdomen is now to be sewed up with silk, carrying the stiches completely through the lips of the wound on each side, and tying them upon the surface of the abdomen at intervals of about half an inch. After this support and coaptate the spaces between the stiches with adhesive plaster, cut into strips quarter inch wide and three or four inches long, and applied warm.

The little patient will now show symptoms of prostration, and the operator will in all probability conclude that "the dog is dead," or at least about to die, but don't be alarmed. Give her a teaspoonful or two of equal parts whiskey and water, and wrap her up in a blanket, and place her near the fire, when she will go to sleep, and the next day be ready to fight one of her brothers for the possession of a bone, which her starved condition will make her regard as a very desirable thing just now. The mother will attend to keeping the wound clean, but it may be inspected daily by the operator, to see that the plasters have not been licked off by the assiduous attentions of the mother. The wound heals rapidly, and at such points as it seems to be united the sutures or stiches can be cut and drawn out, drawing on them toward the wound so as not to tear it apart, first, however, taking the precaution to replace any loose adhesive straps, so as to give the wound and abdomen such support as will prevent protrusion (*hernia*) of the intestines occurring. The incision in the middle line of the abdomen is the best, because here no muscles are divided, and consequently no liability to interfere with the future free and perfect locomotion of the animal.

ORIGIN OF WORMS IN DOGS.—*Editor Forest and Stream:* My attention has been called to a discussion upon the origin of the helminthes, or worms, in dogs, and I feel called upon to say a word upon the subject. This is scarcely the age when spontaneous generation will answer as a theory for the existence of animal life, so that we must account for their presence in the animal in their consummated development, not through a *Generatio Equivoca* (out of diseased organic matter, as is very commonly supposed), but by the fact that their seeds or ova find their way into the animal in some way from without, no doubt chiefly through the medium of food or drink, and find an appropriate soil for existence and development, together with subsequent evolution or generation. Of course, it must be admitted that we are often in the dark as to how the various Entozoa do gain admission into the animal organism; but that they do in some way gain admission from without is now scarcely to be doubted. When once in the body if they meet with a nidus which is congenial to their nature they generally multiply very fast, as all intestinal worms are provided with organs of generation. At the same time, the enormous quantity of ova which some of the Entozoa produce must, in the main, pass out of the animal in an undeveloped condition, and entering into other media, find their way again into other animals. In this connection it should be remembered that these ova are endowed with an almost marvelous tenacity of life, which has given a stronger ground for the arguments in favor of spontaneous generation in connection with Entozoa than almost any other form of animal life. All scientific investigation goes to show, in the first place, that Entozoa (worms) are introduced to the interior of animals from without, and chiefly through the media of food and drink; and, in the second place, that they seldom propagate themselves in the same animal in which their development has been consummated, the seeds or ova passing out of the body to be developed elsewhere. In relation to the case mentioned by Mr. Wanmaker in your issue of the 18th, of course it is difficult to determine exactly how the embryos obtained admission to the interior of the puppies. It is, however, quite possible, I think, that they were obtained through the mother's milk. Valentin and other observers found such embryos in the blood of dogs and other animals. It is supposed that they get there by boring their way into the blood-vessels of the intestinal canal, so that it is still more probable that such embryos might be found in the milk of a suckling mother.

S.

WILL BITCHES WORRY SHEEP?—We have additional testimony from most worthy authority that the premises held, that the female of the canine species will not attack sheep, wants further confirmation. We are anxious to have all the testimony we can procure in order to settle this question:

Mr. Editor: I am much surprised to see the idea put forth that bitches will not kill sheep. There is no truth in the notion. I have often taken them in the very act, and shot them on the spot. No breed is exempt from the vice nor any sex. No dog properly trained and cared for will commit such crimes against society. A sheep-stealing dog always belongs to a lazy master. This vice, like all other moral, mental and physical qualities, is liable to be transmitted to offspring. This is, however, a conclusion well authenticated in my experience. A spayed bitch is much less disposed to wandering habits—especially when left loose at night—than any other, and therefore much less liable to temptation and less prone to mischief. If the operation is performed before the age of six months, the disabling and disfiguring obesity will be avoided, which will ensue if it is delayed until the sexual character is fully developed. I have owned spayed bitches of the following breeds: Setters, pointers, Newfoundland, hounds, terriers and cockers. I have found them to be equal in instinct, courage and endurance to any dog I have owned or hunted with, and more docile, affectionate and cleanly, and less troublesome to keep than any other dogs. I recommend to breeders to spay their bitch puppies freely at from sixty to ninety days old; and I also recommend to bench shows and field trials to present special classes for spayed bitches. Finally, I would suggest to gentlemen living in town that spayed bitches will give them less trouble, will bear confinement much better and cost less to keep than other dogs.

Blacksburg, Va.

M. J. E.

MINNESOTA KENNEL CLUB.—*St. Paul, July 27.*—*Mr. Editor:* The committee hope to receive a large number of entries from all parts. Exhibitors may rest assured of receiving a hearty welcome, as the members of the club propose to do their best to make their stay as pleasant as possible. We have already received numerous applications, very many of whom ask about the prospects for chicken shooting. Well, I am glad to tell you that from all parts of the State the news is, "Very plentiful." The committee held a meeting Monday and determined to hold a public field trial immediately after the Show, and from what I can now learn it will succeed, providing a satisfactory place can be secured within an easy distance from the railroad, and plenty of birds, good accommodations, etc. There seems to be no doubt about securing all these. You can rest assured nothing will be left undone to make them a grand success. The committee have already secured from the Railroad Company free transit for dogs, and half fare for passengers, to and from St. Paul to some point in the neighborhood of Sauk Centre. The entries close Aug. 19. Yours truly, CHAS. LINCOLN, Sup't.

MASSACHUSETTS.—*Cambridge, July 21.*—There was landed Wednesday, July 17, for the Harvard Kennel, the bitch, Countess Vests, by Dan out of Countess. She is in good condition and a very fine bitch. She was served by Brown's Dash II. before leaving England. Dash was the winner at Horseshoe this year.

WHELPS.—*Marshalltown, Iowa, June 23.*—Mr. I. S. Jones' orange and white Phoebe whelped, June 17, twelve puppies, eight dogs and four sluts, out of his Jet.

Yachting and Boating.

HIGH WATER FOR THE WEEK.

Date.	Boston.	New York.	Charleston.
AUG 2.....	H. 1 39	H. 10 53	H. 10 06

THE LOG.

Though the common or "chip" log has been almost entirely superseded by patent metallic or towing logs in the merchant service and in our yachting fleet, it is still the only one in use in the U. S. Navy, and from present appearances is likely still to remain so for a long time. Its advantages are mainly the impossibility of getting out of order and the readiness with which such a speed measurer can be put together aboard ship. Its disadvantages are the number of hands required to attend or "heave" it, and the fact that, being heaved only periodically, the variations of the ship's speed in the intervals will not be taken into account. These, if large, are estimated by the deck officer and allowance for the same made when noting the speed indicated at the heaving of the log. In the navy there is no objection to the use of several men when heaving, as there is plenty of "beef" to be had in the "after-guard" and among the marines; and the order, "Afterguard, hold the reel!" given by the dapper midship of the watch, brings to their feet promptly two or three sons of the Fatherland, bravely serving Uncle Sam in the stiff-necked uniform of a marine, or an equal number of *daigors* undergoing their probation as landsmen to the tune of \$13 a month. In connection with the common log a sandglass is used, and in it lies a second source of possible error, hence occasionally testing the glass both ways by comparison with the chronometer is a precautionary measure not to be overlooked, by a careful captain. On the whole, the log has proved entirely efficient, and it is seldom that a good navigator is compelled to ascribe to mysterious but convenient ocean currents the difference between his positions at sea by "dead reckoning," and "observation."

It is well to fully understand the working and derivation of the chip log even aboard a yacht, since the patent arrangements may give out or be lost, when, with a piece of board, an ax and a line, a chip can be rigged to do duty instead. The figures given herewith show the chip, the reel and the sandglass above, and a patent log underneath.

The chip is made of thin board, so shaped as to include a segment of 60 deg. to 90 deg. of a circle, whose radius may be from six to eight inches, and is loaded on the circular side to an extent sufficient to keep the board upright in the water, without causing it to sink. To this chip the line is attached in the following manner: Bore holes in all three corners. Through the lower two reeve a span, turning in knots at the back of the board. Through the upper hole reeve a single piece of line, having at its end a "toggle" of wood. To the span bend on the regular log line, which will be furnished with a wooden thimble for the toggle to fit or lock into. See that all three parts leading to the chip are of like length when toggled, so that the wood may float upright, and not skim along the surface. Often, instead of "bending" on the line to the span, its end is used for one leg, and a short piece spliced in for the second. This makes the neatest arrangement. The thimble is simply sized on with rope yarn well rubbed down, or with twine. The line is divided and marked, and then reeled up on a skeleton reel ready for use. The divisions on the line are termed "knots," their length depending upon the principle that they should bear to a sea mile the same proportion as the running time of the sand-glass bears to the hour. If, therefore, you are using a half minute glass, the knot should measure 1-120 of a sea mile. The latter contains 6,086 7-10th feet, hence the knot on the line should be 51 feet in length. Each knot is again sub-divided into 10 fathoms. Since it has been found in practice that a ship will generally overrun her reckoning, the above measures are often shortened 3 or 4 ft., so as to be on the safe side. The glass is influenced more or less by the weather, and a comparison should often be resorted to. If no chronometer is on board regulate it by these directions: Fasten a plummet on a line and hang it from a nail, making the distance from nail to centre of plummet 39 in., then swing the plummet and count its vibrations while the glass is running out, the number observed will be the time of running in seconds. This method depends upon the law of the isochronous vibrations of the pendulum. Mark the log-line when wet. The glasses in general use are of 28 sec. and 14 sec., known as the "long" and "short" glass. Should the 28 sec. glass be used each knot must measure 47 ft., less a few feet for precaution. It is customary in the navy to make the knot 7 1/2 fathoms long, or 45 ft.

To heave the log, let one man hold the reel clear of his body, another the glass, while the third throws the log overboard from the lee quarter. When he observes that the "stray" line has run out (about six to ten fathoms, enough to allow the chip to go clear of eddies in the ship's wake), and the first mark (a white rag) is passing through his hands,

he sings out "Turn!" The glass holder answers, and watching the glass closely sings out "Up!" as soon as the sand has run out. The line is immediately caught (nipping it over the rail is a good way) and the nearest mark outboard read off. The distance between it and the place caught is estimated in fathoms. If the wind has not been constant since a previous heaving, allowance must be made, similarly if before the wind and it is deemed that the heavy sea has set the chip toward the ship during the operation.

Patent logs may be divided in two general classes—those which tow astern and require hauling in to read them off, and others having the indicator located on the taffrail. The latter kind, known as "taffrail logs," have, of course, one great advantage over the first in not requiring hauling aboard every time you may wish to know the distance made. They consist of a revolving fan towed astern, the revolutions being imparted to the line, the latter in turn being connected with the wheel gearing in the indicator placed on the rail aft. As each revolution of the fan in the water corresponds to the known "pitch" of the fan, it is an easy matter, by a system of wheels in the indicator, to reduce a certain number of revolutions, equivalent say to one knot, so that the hand on the dial will point to 1, double that number of revolutions (in other words, twice the distance run) will send the hand to 2, and so on. These logs are made by Ritchie, of Philadelphia, and we have his assurance that they work well and indicate truly, though we have never done a day's work with them ourselves, and must therefore take the verdict of others. Generally the fan is towed by a line, but if fine wire cable is substituted, it would seem more satisfactory to us, unless the weight of it would be an objection. Of the common towing logs, Massey's and Walker's are best known. The latter is the subject of our illustration. It consists of a metal cylinder, only the latter portion of which revolves, the leading half containing the wheel gearing for registering the number of miles corresponding to certain numbers of revolutions of the rotating half. This is, of course, arranged according to the pitch of the vanes or fans on the latter half. The two fins observed on the register half are intended to keep the latter in a vertical plane, as it must always keep the same position, the rear portion only being forced to rotate at a speed in obedience to the speed of the ship. This log must be connected to its towline, from 15 to 40 fathoms, according to the size of the yacht, the register set at zero, the cap turned on over the dials and then hove over, noting the time of beginning the count. The Walker log can be depended upon for great accuracy, unless, indeed, the wind should be very light and fluky and a heavy ground swell or sea on at the same time, when its vertical motions will cause it to show a greater distance than actually run; this is an error on the safe side, however. You can use two logs, one to check the other, if desired.

The ground log is the name given to a log line with a lead attached to it, for ascertaining speed over the ground in a current or tideway, when "on soundings." A statute mile is 5,280 feet, and a knot or sea mile 6,086.7 feet; hence, to convert sea miles into statute, multiply by 1,153, and to change statute into sea miles, multiply by 0.868.

YACHTING NEWS.

NOVA SCOTIA YACHT SQUADRON.—The second racing event of the season came off on Saturday, July 13, at Halifax, when eight yachts sailed over No. 2 Basin course for three prizes, presented by Mr. Sumichrast, Hon. Secretary. It was blowing stiff from S. W., with heavy squalls, and the schooners for once had the race all their own way, squandering the fleet of fast sloops in good style. Rear Commodore Stairs had charge of the race, and at 2:05 p. m., fired the starting gun. The line was crossed by:

Name.	Owner.	H. M. S.
Albatross.....	Schooner. 17	D Crocan
Lily.....	Sloop. 5	W H Weeks, M D
Circe.....	Sloop. 5	D C Chalmers
Seafam.....	Schooner. 27	Capt Larcom, R A
Mela.....	Sloop. 3	St Kervison, R A
Wavelet.....	" 2	W H Brookfield
Psyche.....	" 7	St Capel Crow, 20th
Euth.....	" 5	W Atkinson

With a leading wind the whole fleet spun along for Navy Island flag-boat, round which the *Albatross* and *Seafam* led, but here the former made a mistake, continuing to stand up the Basin instead of tacking short around, as the *Seafam* did. The latter fetching Rockhead, got the benefit of the torrent of wind pouring out of the N. W. Arm valley, and fairly flew past the Four-mile House flag-boat, leading the *Albatross* handsomely. The *Circe* and *Psyche* were astern of the two schooners, doing fairly well; but the *Wavelet* and *Lily* had come to grief, the former carrying away her peak-halliards, the latter losing her topmast in one of the squalls. *Seafam* lost time by having to hunt for the flag-boat off Bedford, which had been moored in the wrong place, and this allowed *Albatross* to crawl up on her, the timing as they jibed around the mark being:

Name.	H. M. S.
Seafam.....	3 25 27
Albatross.....	3 27 55
Circe.....	3 33 15
Psyche.....	3 34 30

Once on a wind *Psyche* showed to better advantage, and before a couple of miles had been covered she was close on *Circe*'s heels. In the Narrows she weathered her beautifully sailed rival and went ahead, soon placing the time allowance to her credit. *Seafam* meanwhile had kept her lead of *Albatross*, and the race, which was sailed very fast, ended thus:

Name.	H. M. S.
Seafam.....	4 27 55
Albatross.....	4 29 55
Psyche.....	4 46 35
Circe.....	4 49 37

The others not timed. *Seafam* took schooners' prize, *Psyche* first, *Circe* second sloops' prizes. *Circe* was sold the same evening to a Lunenburg gentleman, and sailed for her new abode the following Wednesday. Her owners have purchased a new and larger yacht.

Mr. Sumichrast has presented the third prize won by his sloop on the 21st of June as a special prize, to be sailed for on the 17th of August.

Vice-Commodore White returned from Europe, has assumed command of the squadron, and on the 20th led the fleet out for squadron exercise, his beautiful yacht *Kestrel* being flagship.

Mr. Brookfield has purchased the little *Wavelet*, formerly owned by Mr. R. Macdonald, of the *Xiphias*. She was built by Moxley.

Sloop *Mystery*, Mr. Sumichrast, and yawl *Nymphia*, Mr. C. E. Brown, were to sail on the 23d of July on a cruise to the eastward, but their departure was delayed by thick fog and head winds.

CORRECTION.—In Mr Sumichrast's letter in issue of July 18,

Sultana was printed for *Jullanar*. There is no racing yacht in England at present of the name of *Sultana*.

LAKE YACHTING.—Belleville, Ont., July 19.—Many yachts are on their summer cruises at present. The *Irene*, of Port Hope, visited this port a few days ago. She is a sloop of 33 tons, and is a very fine cruiser in every way. Mr. Stone, of Oswego, has purchased the open yacht *Joseph B. Sprague*, a 20-ton craft, formerly of Ithaca, N. Y. She is a fast sailer, and will be quite an acquisition to the Oswego fleet. The famous *Annie Outhbert*, lately of Hamilton, Ont., has gone to Chicago. She has been re-christened the *Greyhound*, and will probably sail a race at an early date with the *Corra* of the same place for the champion flag of Lake Michigan. Our civic holiday will occur on August 2, when there will be a grand aquatic carnival, including a race between the first-class yachts *Dauntless* and *Madcap* for the B. Q. Y. C. challenge flag; a race between the second-class craft (10 tons and under), for a beautiful silver cup presented by ex-Commodore Kelso; a contest between third-class yachts (5 tons and under), for a purse, besides which there will be rowing races, a sailing punt race and other aquatic sports. Several yachts of the local fleet will start for their annual cruise on August 5. They will visit Oswego, Charlotte and other south shore ports, and will probably find time to take part in the Brookville regatta, which is set for the 14th and 15th of August. PORT TALK.

QUINCY YACHT CLUB.—This club held its second championship regatta, July 19, off Mears' Hotel, Quincy, Mass. Course—Eight miles for first, seven miles for second, and six for third-class boats. Light wind from the south. First and second class failed to make the race, owing to want of wind. In the third class *Dolly Varden* managed to cross in 3h. 6m.; corrected time, 2h. 30m. 38s. The larger boats will resail at a future day.

SAN FRANCISCO YACHT CLUB.—The fleet of this club met in squadron on the Fourth of July, and made a four-days' cruise to Napa, under the command of Vice-Commodore C. H. Harrison. The fleet comprised the *Frolic*, *Consuelo*, *Emerald*, *Starlet*, *Fawn*, *Ariel*, *Enid*, *Virgin*, *Lively*, *Clara* and the *Magic* of the Undine Club, besides Dr. Merrill's new schooner *Casco* and the *Matthew Turner*. *Clara*, a New York boat, seems to have been the best off the wind, but as she did not do any turning while in company with the fleet, her weatherly qualities seem still to be an open question, though we think she will not be found wanting in that respect. Social festivities and races among the yacht boats varied the programme. The annual regatta takes place the first Saturday in August. The club house is approaching completion. *Pacific Life* adds that: "One of the boys sailing a yacht up Napa Creek got the chart wrong side to, and was working the bends from Napa down while sailing the other way. He thought there had been many changes since the chart was made."

NEW YORK YACHT CLUB.—The following schooner yachts have signified an intention to participate: *Restless*, Commodore S. Nicholson Kane; *Rambler*, Vice-Commodore Wm. H. Thomas; *Madeline*, ex-Commodore John S. Dickerson; *Dreadnaught*, Mr. A. J. Osborne; *Intrepid*, Mr. Lloyd Iphix; *Estelle*, Mr. J. P. Smith; the three-hull catamaran *Nereid*, Mr. Anson Stokes; *Tidal Wave*, Mr. Cook; *Olytic*, Mr. Brooks; and *Clia*, Mr. King. In addition to the above the *Columbia*, *Comet*, *Foam*, *Nettie* and *Vesta*. The sloops that will go are the *Active*, *Dudley*, *Regina*, *Vision*, *Vixen*, *Volante*, Mr. Stillman's new cutter *Muriel*, and the *Recreation*. It is thought that the steam yachts *Lurline*, *Ideal*, *Vidette* and *Promise* will also accompany. While at Newport there will be a gig race among the yacht crews for the Bennett Cup.

ACCIDENT TO THE INA.—The sloop yacht *Ina* was capsized by a squall off South Point, while on her way from Milwaukee to Racine, July 21, and her crew climbed on her bottom. Mr. Henry Elliott started to swim ashore to obtain assistance, but has not since been heard from. The others were rescued, when the yacht finally drifted ashore.

NAHASSETT YACHT CLUB.—The second regular regatta of the Nhassetts this year took place Saturday, July 20, off Nahant. The start was from an anchor, under conditions already published in our columns. The following is a summary of the race:

FIRST CLASS.			
Name.	Owner.	Actual Time.	Corrected Time.
Fanchon.....	Arthur Burgess.....	2 24 25	2 24 25
Ruth.....	W Bassett.....	Not taken.	1 56 40
SECOND CLASS.			
Fanny.....	P Grant, Jr.....	3 17 55	2 40 36
Ida.....	F P Emery.....	Withdrawn.	
Druid.....	F A Drew.....	Withdrawn.	
Avon.....	R D Bears.....	Withdrawn.	
Ardrence.....	P Palfrey.....	3 36 59	2 55 58
Eurus.....	P Dalen.....	3 42 32	3 02 20
George.....	H Hocker.....	3 53 00	3 02 53
Marion.....	J A Story.....	Not taken.	
THIRD CLASS.			
Name.	Owner.	Length.	Actual Time.
Psyche.....	King & Clark.....	17 08	3 15 43
Beesle.....	G P Upham, Jr.....	17 05	3 19 12
Nora.....	R P Buelling.....	16 11	3 27 41
Arta.....	W C Haskell.....	17 01	3 47 40
Mira.....	S W Burgess.....	17 11	2 44 31
Rose.....	F E Abbott.....	15 09	3 29 19
Lillie.....	W P Peters.....	17 04	3 53 44
FOURTH CLASS.			
Splash.....	C S Hodges.....	10 06	56 55
Josephine.....	C H Minor.....	11 06	58 00
Sadie.....	O S Dean.....	11 06	58 32
Nimpor.....	D J Aspinwall.....	12 00	Withdrawn.

UNION REGATTA IN BOSTON BAY.—The Union regatta, held off Strawberry Hill, Saturday, July 20, proved a great success. Wind strong from E. S. E., but it died out somewhat during the latter part of the race. No first-class yachts were started, most of them being absent on cruises. The first prize in the second class for centre-boards went to the *Folly*, and the second prize to the *Napoleon*. The first prize for keel boats in this class was awarded to the *Lottie*, and the second prize to the *Gael*. In the third class the *Nettie* took the first prize and the *Posey* the second, the *Emily* taking the third. The fourth class was composed entirely of centre-board boats, and the *Waterwitch* came in first, with the *Rescue* second and the *Lulu* third. The course was eight miles, and the judges were Messrs. M. J. Kiley, H. A. Keith, S. S. Goodwin, George W. Morton, George C. Melvin.

WARWICK YACHT CLUB.—The Union Regatta of this club was sailed July 24, over the regular club course off Rocky Point, Narragansett Bay. A stiff breeze was blowing from the south. The course was around Hope Island and return, about thirteen miles. Prizes were the entrance fees. *Hope* won in the sloop class in 1h. 53m. 59s., beating *Starlight* 55s.; and *Wilcox*, among the cat-boats, in 1h. 45m. 7s., beating *Warwick*, *Venona* and *Edith*.

BROOKVILLE, C. W., REGATTA.—In the yacht race sailed 2. Brookville, July 24, there were four starters. Wind blowing a gale, and *Lennon* and *Sleepy Canadian* capsized. *Peerless* went ashore, and *Pari* took the prize.

NEWPORT CAT-BOAT RACE.—The race July 25 among the large fleet to be found in and about Newport during the season, was an event long to be remembered among the owners of the small fry, for the regatta brought together a larger number of craft of this class than ever before came to the starting line. Owing to the exertions of the committee in charge, composed of Messrs. Philip Schuyler, Bohert Center and Stuyvesant Leroy, no hitches occurred, and the vast fleet was well got off, and the race a complete success in every way. Course for first and second class, from southeast end of Goat Island around stake-boat to the north of Gould Island, thence around Brenton's Reef lightship and around the Black Can buoy off the southerly end of Goat Island, and finally across line from schooner *Restless* to the shore. Third and fourth class did not round the lightship or the buoy off Beaver Tail, but turned a stake-boat off Castle Hill and finished across a line from judges' boat and Goat Island. The two courses were twenty and sixteen miles. The start was made at 12h. 37m. Wind moderate from S. E., but freshened so that reefs would have done some of the craft no harm. *Dart* sprung her spar, and *Hebe* was fouled by *Marion*; *Dick* carried away peak-halliards, and *Sunshine* capsized in an attempt to jibe. After a very prettily-sailed race the result was as follows:

FIRST CLASS.			
Name.	Start.	Return.	Elapsed Time.
Wanderer.....	12 37	3 51 31	3 14 54
DeLoney.....	12 37	3 51 00	3 14 23
Catharine.....	12 37	4 02 02	3 25 05
Dart.....	12 37	4 06 01	3 29 04
Hebe.....	12 37	4 06 01	3 29 04
Carrie.....	12 37	4 06 01	3 29 04
Annie and Katie.....	12 37	4 06 01	3 29 04
Uda.....	12 37	4 06 01	3 29 04
Marion.....	12 37	4 06 01	3 29 04
Mattie.....	12 37	4 06 01	3 29 04

The *Wanderer* was awarded the first prize and the *DeLoney* second.

SECOND CLASS.			
Axis.....	12 39	4 22 26	3 43 25
Lizzie.....	12 39	4 22 26	3 43 25
Myra.....	12 39	4 22 26	3 43 25
Harvest.....	12 39	4 22 26	3 43 25
Lizzie Cameron.....	12 39	4 22 26	3 43 25
Dick.....	12 39	Not timed.	
Edna.....	12 39	Not timed.	
No Name.....	12 39	Not timed.	
Jeff.....	12 39	Not timed.	
Glenn.....	12 39	Not timed.	
Sunshine.....	12 39	Not timed.	
Gracie.....	12 39	Not timed.	

In this class the first prize was won by the *Harvest* and the second by the *Lizzie*.

THIRD CLASS.			
Jerboa.....	12 41	3 24 10	2 43 10
Wilcox.....	12 41	3 25 30	2 44 30
Darkie.....	12 41	3 27 35	2 46 35
Niva.....	12 41	3 29 52	2 48 52
Buster.....	12 41	3 45 47	3 04 47
Ellnor.....	12 41	3 48 33	3 07 33
Mascha.....	12 41	3 49 06	3 08 06
Reindeer.....	12 41	Not timed.	

The prizes in this class were taken by the *Jerboa* and the *Wilcox*.

FOURTH CLASS.			
Martha.....	12 43	3 34 21	2 51 21
Wasserfrau.....	12 43	3 39 50	2 56 50
Nathalie.....	12 43	3 40 02	2 57 02
Hamblet.....	12 43	3 45 50	3 02 50

Prizes awarded to *Martha* and *Wasserfrau*. *Wanderer* is the property of Mr. W. Davis, and measures 25ft. 6in.; *DeLoney* belongs to Mr. DeLoney, and measures 25 ft. 11in.; *Harvest*, Mr. J. W. Arnold, measures 23ft. 1 1/2in., and *Lizzie*, Mr. B. Briggs, 24ft. 5 1/2in. In the third class *Jerboa*, Mr. J. D. Hilder, measures 17ft. 5in., and *Wilcox*, Mr. C. Wilcox, 18ft. 4in. In the fourth class *Martha*, Mr. A. W. Aldred, measures 16ft. 10in., and *Wasserfrau*, Mr. John Johnson, 14ft. 5in.

NEW ROCHELLE REGATTA.—The fifth annual regatta of the New Rochelle Yacht Club is set down for August 17, off the Neptune House, at that place. Classification of yachts as follows: 25ft. to 30ft., 20ft. to 25ft., cats 20ft. to 25ft., cats 15ft. to 20ft., and cats under 15ft., liberal prizes are offered, and it is expected that the entries will equal those (46) of last year. We have not yet been informed concerning the rules of the ballasting and crews to be enforced, but we hope that the regatta committee, when it comes to the consideration of the matter, will give its adherence to Corinthian principles as adopted by the Seawanhaka Yacht Club and many others, for it is time that yacht sailing were brought to a higher level and divorced from the machine jockeying heretofore in vogue.

THE CUTTER MUEHL.—This smart little sea going yacht has been on the screw-docks, East River, for several days last week and has had a coat of bronze put on her bottom. She excited much attention and comment. Some sailing between her and the *Volante* will be in order, to compare notes between the compromise model of the Messrs. Hitchcock's cutter and Mr. Stillman's full blooded English craft.

HANDINESS OF THE CUTTER RIO.—Upon a recent cruise East we had a very fair opportunity of practically testing the handiness of a regular cutter rig and do not hesitate to pronounce decidedly in its favor. By so reefing the staysail sheet or foresail sheet, as our cousins abroad put it, that it works itself when turning to windward, there was no more gear to handle than in the sloop; while splitting the headsail into two pieces made it very much easier to hoist, trim, or stow, and each sail could be brought aft flatter than the single jib. For cruising this rig is to be preferred to the usual sloop, and if you happen to get into rough water—it does not take much of a breeze to raise a sea for a little 30-foot craft—reefing the bowsprit will come in handy, save the stick and increase speed. Of course, to those who may either not care or not have the leisure to go much beyond five or ten miles from their mooring grounds, the efficiency of the cutter rig will offer no special inducements, for to them it would have the offset of slightly increased expense in fitting a rig, the advantages of which might not be called into play at all. But yachtsmen who are unfortunate enough to have their sailing confined to a bay or sound, can hardly be deemed cruisers, much as many of them would like to undertake lengthy voyages. With the increase of wealth and leisure in the country, the venturesome spirit of the amateur sailor is beginning to carry him beyond the confines of Fort Schuyler and Fisher's Islands, and he is also showing his good sense and love of seamanship in taking to a safe sea boat and the sailor-like rig of the genuine cutter.

MADISON YACHT CLUB.—Mr. Editor: The eighth annual regatta of this club on Lake Mendota, July 24 and 25, proved very successful. For the first day nine first-class craft entered: The *Niobe* and *Peregrina*, of Oshkosh; the *Geneva* and *Agamemnon*, of Geneva Lake; the *Lulu*, *Idler*, *Eclipse*, *Sadie* and *Grey Hawk*, of Madison. In the second class were the *Gracie*, *Zephyr*, *Active*, *Nannie*, *G. B. Esty*, *Silver Heels* and *Jud Stone*, of Madison. The course was eight miles and repeat; the prize, \$100 in gold and \$50 in gold to first-class yachts. In second class race the prize was \$40 and \$20 in gold. The start was a flying one, and the *Peregrina* took the lead and kept it on the first course. The *Geneva* followed closely, and then the *Agamemnon*. The *Niobe* was the last boat to start, but was the fourth to pass the home flag on the first course. In the second course she took the lead on the fourth mile, followed by the *Peregrina*, *Grey Hawk*, *Lulu*, *Agamemnon*, *Geneva* and *Eclipse*. The race was won as follows:

Name.	M. S.	Name.	M. S.
Niobe.....	3 2 47 1/2	Peregrina.....	3 11 2
Grey Hawk.....	3 5 6	Agamemnon.....	3 14 38
Lulu.....	3 10 26	Eclipse.....	3 18 7
Idler.....	3 11 24 1/2	Sadie.....	3 36 21
Geneva.....	3 15 49 1/2		

In the second class race *Zephyr* won the first prize and the *Gracie* the second. The prizes for the second day were \$50 in gold for first prize and \$25 in gold for second. There were five entries. The *Niobe* took first money and the *Agamemnon* second. Everything passed off pleasantly, visiting yachtsmen expressing their delight at the manner in which the races were conducted. Madison boasts of the finest sailing grounds in the West, and this is the opinion of all experienced yachtsmen. Freeman's Pier was a busy place during the races, and the accommodating captain did all in his power to add to the success of the regatta. ROVER.

Madison, Wis., July 26, 1878.

YACHTING DRIFT.

Yachting lively in San Francisco.....The New York yacht *Clara* has been found wanting on a wind in rough water, *Emerald* having weathered her recently in San Francisco Bay.....*Casco*, schooner, of that port, is bound on an outside cruise down the Pacific coast.....*Prospero* has visited Boston.....Newport is full of yachts.....Schooner *Nito*, of Rockland Park, Conn., capsized in the Sound, Tuesday, July 23. Trouble, too much beam, too little depth. Crew saved.....*Artful Dodger*, Capt. Jake Schmidt, is ready for the other job—and mainsails with \$100. Step up, *Nettle*, *Thistle*, *Susie* S., etc.....Time allowance is hithering our British cruisers.....Everybody is out cruising, all the anchorages are deserted.....Catamarans make Englishmen stand aghast. What next from Yankeealand, they think.

NEW BEDFORD YACHT CLUB.—In the third of a series of five races of this club, sailed at New Bedford, July 27, *Sylph*, Mr. James C. Beetle, took the prize, others having been ruled out for going over wrong course.

NEWPORT YACHT CLUB.—The following officers were elected Saturday last: Commodore, Samuel F. Pratt, of Boston; Vice-Commodore, Henry A. Mott, of New York; Secretary, W. V. Olyphant, of New York; Treasurer, Lieutenant E. M. Steadman, U. S. N.; Measurer, Richard Yeomans, of Newport.

OAR AND PADDLE.

COLUMBIA COLLEGE CREW RECEPTION.—The victorious Columbia College Crew will be received by their comrades in the lower bay. The steamer *Blackbird* has been chartered for the purpose. The crew will leave Liverpool in the steamship *Berlin* Aug. 1, and will arrive in this city about Aug. 10. They will be escorted to Delmonico's and there received in public. Alderman Biglin's municipal committee have not yet published their programme, but will see to it that America's great victory receives due public recognition. There are high times ahead for the brave four that snatched from Great Britain her prestige on the water and transferred to American shores the Visitors' emblem of superiority at the oar.

BRASS BUTTONS AGAIN.—At a meeting of delegates from twenty-two precincts, held Sunday, 14th inst., the Metropolitan Police resolved to hold a regatta on the Harlem, Sept. 3. Races will be open to all members, and will comprise single sculls, working boats, pair-oared and a four-oared race, when, for the nonce, the club will be exchanged for the oar.

CITIZENS TO THE FRONT.—Newark expects a great time at the National Regatta, Aug. 20 and 21. Over \$500 has been subscribed by local clubs, and prominent citizens have taken the matter in hand, so that a hearty welcome may be extended to the visiting oarsmen.

BAYONNE-VIKING REGATTA.—The race between the Bayonne Rowing Association, of Bayonne, N. J., and the Viking Boat Club, of Elizabeth, N. J., came off, June 27, in Newark Bay. Course, one and a half mile and return. Jasper of the Bayonne crew was somewhat indisposed, and the race went to the Vikings, composed of the following gentlemen: C. H. Halsey, stroke; J. H. Stoddard, H. E. Duncan, F. Plumed, bow, and B. Darragh, coxswain. Time, 10m. 52s., beating Bayonne 2s. only. The race for the Junior Champion's Gold Badge of the Bayonne Club was won by Hay in 11m. 5s., Edward Mallet giving out. C. H. Waudell and H. L. Weston were judges; F. W. Gifford and W. E. Van Buskirk, timers.

PACIFIC AMATEUR ROWING ASSOCIATION.—At the meeting of the executive committee of this new association, held July 13, it was resolved to hold the annual regatta at Soncelito, September 24, both yacht club houses having been tendered them for the occasion.

PORTLAND, CAL., BOAT RACING.—The Willamette Rowing Club, of Portland, Cal., held their regatta in that city recently. Course, 1 1/2 mile. Entries, Cressid and Occident crews. Won by Occidents in 28m. 5s.

LOUISIANA STATE AMATEUR ROWING ASSOCIATION.—The regular annual regatta of this association was held Monday, Tuesday and Friday, July 15, 16 and 19. The races of the first day were four in number. First race for single sculls; course, two miles. Entries: Atlantic, A. Alascal; St. John, R. B. Musgrove; Orleans, C. N. Edwards; Galveston Rowing Club, J. Crotty; Perseverance, F. J. Mumford; Hope, J. O'Donnell. Hope went to the front on the way up, all, however, steering very wildly. Crotty, of Galveston, turned first and Mumford second, Alascal having capsized. Crotty crossed the line first, winning in 16m. 2 1/2s. Galveston was elated at this victory of their best sculler. Second race, for single scull working boats; course, same as before. Entries: Orleans, Owen Reilly; Pickwick, L. Vades; Riverside, P. Gallagher; Hope, J. Cannavan; R. E. Lee, W. H. Brooks; Southern, H. Decker; Louisiana, J. Roquet. Lee worked out to the front, turned first, and retained his lead all the way

home. Time, 15m. 59 1/2s. Third race, four-oared gigs; two miles. Entries: Perseverance, Katie P.; Louisiana, Blonde; Magnolia, Cora F.; Hope, Nettie Norton; Howard; Southern, C. H. Allen. Hope took the lead, Magnolia and Southern following. Howard, Hope and Southern turned the stake together, but on the homestretch Hope again went to the front, winning by five lengths. Fourth race, single sculls, light weights. Entries: Perseverance, John P., J. Keegan; Orleans, Emma, B. Shield; St. John, St. John, W. Lemonnier; Louisiana, Jane, C. Truistou. Won by W. Lemonnier; time, 15m. 14 1/2s.

Second day (Tuesday).—Owing to roughness of water, only the large race was pulled late in the afternoon. Entries: R. E. Lee, Unknown; Perseverance, Katie J.; Hope; Riverside, Mary G.; and Atlantic, Wm. McKee. Riversides took the lead, and on the way up had a close race with the Hopes. The latter, however, turned first, followed by the Riversides and R. E. Lee. It was a close race on the homestretch, Hope crossing first and winning in 14m. 11 1/2s.

Third day (Friday).—The remaining races, postponed to this day, were started at 5 p. m. First race, double-sculls, two miles. Entries: Perseverance, Lulu; Hope, J. L. Harris; and St. John, Aurelia. Perseverance took the lead, but were passed by the others, St. John and Hope turning almost together and in opposite directions, causing a had foul and bringing them to a dead stop. Perseverance in the meantime came up and went on her way home rejoicing, winning in 13m. 58 1/2s. Second race, four-oared shells, three miles. Entries: R. E. Lee, Sophie Swan; St. John, J. Glynn, Jr.; Southern, J. P. McKelroy; and Hope, J. Wolkart. Riversides withdrew. Sophie Swan got the best of the start, Southern next, Hopes third. Hopes turned first, St. Johns second, then Southern and the Lees. The Hopes came in winners; time, 19m. 32 1/2s. They receive the champion pennant and retain it as property, having won it three times. Last race was a "consolation" race for single-sculls. Entries: R. C. Musgrove, of St. John, and C. M. Edwards, of the Orleans. Won by Musgrove. The umpire and judges decided to row the double-scull race over again on account of the foul, but Perseverance objects and rightfully claims the prize.

WHAT A RELIEF.—It has been decided, after occult consultation among the powers that be, that hereafter the Wingfield Sculls will be open only to amateurs of the United Kingdom, and that American scullers must keep their hands off. This is a wise, if questionable decision, and the British sculler now has a sure thing of it. Lee, of Newark, cannot interfere with our cousin's sport; they are to have it all to themselves. But what fearful consternation have not the American oarsmen recently created in the British mind, that they must needs make safe of a prize at Henley in the future by debarring all others!

GENEVA REGATTA.—It is proposed to hold a grand professional regatta on Geneva Lake, N. Y., some time in September, when all the celebrities are expected to be present, from Courtney and Hanlon down.

COURTNEY AT SILVER LAKE.—Under the auspices of the Eastern Rowing Association, Courtney will probably meet Reilly, Plaisted, Johnson and others on Silver Lake, Mass., on the 15th or 22d of August.

BEARDED IN HIS DEN.—The British lion has been cowed. The Shoe-wac-cac-mettes, naturally enought not satisfied with the result at Henley, challenged the London Four to a second race. The London crew declined. They prefer to cling to accidental victory rather than risk defeat in a fair square pull. The old-time Bull was not so easily scared, and would no more have thought of refusing a "square trial" to a crew which had come 4,000 miles to meet him on his own water, than did the modern Bull expect to see his cherished Visitors' Cup go to join the America Cup in the very safe keeping of the Greater Britain of the West.

BRITISH TIMERS.—The wonderful instruments used for timing at Henley were of the very finest London make. Nothing but the highest grade of cast iron was used in their construction, while the movements were set in cobble stones of the purest water. They are presumed to vary somewhat in theory, though never more than 20s. over the 10-min. course at Henley. They put the Shoes over the course in 8m. 4s., which was a little too fast for plegmatic John Bull, so the judges thought it would be about the right thing to add 20s. to the indicated time. Evidently there is a field for Sam Slick and his wooden clocks across the sea.

A BAD RELAPSE.—Mr. Brickwood, of the London *Field*, writing in deference to the narrow-minded tastes of a rapidly disappearing clique of self-sufficient cockney snobs, waits the British Consul to certify to the character of Americans going to England to beat them at the oar. All right. And let the American Consul certify as to the real gentlemanly conduct of amateurs in Great Britain, and issue a written guarantee against willful fouling on their part, as well as an assurance that the race is to be pulled on a river, not in a half dry gutter. But best of all is Mr. Brickwood's candid admission that English oarsmen cannot learn to steer without ballast in the shape of a coxswain. The recommendation to fall back to the usages in vogue in the halcyon days of King Canute, will provoke a compassionate smile on this side of the Atlantic at the pitiable inefficiency of England's men in the bow.

THAMES ROWING ASSOCIATION.—The new boat-house of this association, of New London, Conn., was opened a short time ago with appropriate ceremonies. It is a substantial and tidy structure, built just below the New Haven Railroad bridge, and the roomy float in front has served as a good purpose recently when freeing our dinghy from water and giving her a cleaning, while on a cruise down East. The association has a crew in practice to meet the men from Norwich, who some time ago expressed a desire to pull them when and where they would. Since New London has the honor of being the headquarters of the annual varsity race, boating ought to look up in that neighborhood, and the Thames Association has gone to work with a will to infuse life into the young scions of the brave old race of whalers who have settled down to permanent moorings in that quaint old town.

NATIONAL ASSOCIATION OF AMATEUR OARSMEN.—The national regatta of America will be held Tuesday and Wednesday, August 20 and 21, on the Passaic at Newark, N. J. It is open to all members of Amateur Rowing Clubs which have been organized three months prior to the date of this regatta. The rules of the National Association will be in force, including those recently adopted concerning amateurs and junior scullers. Races will be as follows: Single sculls, double sculls, pair-oared shells, four-oared shells and junior single sculls; one and a half mile straight away. Besides the cups and plate of the association, individual prizes will be given to the winning oarsmen, and a silk flag to the clubs of the winners. A reception committee has been appointed

by the Eureka and Triton clubs, of which Mr. George O. Miller is chairman. He will give all information to applicants who address him at No. 703 Broad street, Newark, N. J. The City Council has offered their meeting room to the Committee of the National Association, and from our information to hand, the event promises to eclipse all similar ones held previously, and will go far to establish permanently the favorable hold the National Association has upon public sentiment. Entries close August 6, and should be made to Henry W. Garfield, Esq., Secretary Regatta Committee N. A. A. O. Albany, N. Y. Entrance fees: Fours, \$15; doubles, \$10; pairs, \$10; singles, \$5.

DOWN THE HOUSATONIC IN A CANOE.—New York, July 30.—*Editor Forest and Stream:* The Housatonic is certainly an eccentric stream, for, while it is deep for the first fifty miles of its course, it suddenly becomes shallow and virtually uncanoeable a few miles below Falls Village. The trouble is that it attempts to spread itself out and rival larger rivers in breadth. It follows as a necessary result that it has not water enough to cover the nakedness of its stones, and its rapids become too shallow to be shot except when the water is unusually high.

From West Cornwall to Cornwall Bridge is a continuous succession of rapids. The water is usually about a foot deep, but the rocks and stones are so numerous that a canoe cannot float a rod without striking. There is an old dam and a rather formidable looking rapid below it at Cornwall Bridge, but it can be run by keeping close to the right bank. From thence to Kent are about half a dozen more rapids, all of which must be waded. Now, to wade rapids under a July sun, when the bottom is composed of round stones that make the footing extremely precarious, is not an unalloyed pleasure. In fact two days of it are all that any rational man can require. For my part I became entirely satiated with the rapids below West Cornwall, and as the river from Kent to New Milford is but a repetition of the shallow rapids between West Cornwall and Kent, I prevailed on my companion—who would gladly have waded for the next six years sooner than abandon a cruise—to make the rest of the cruise to Bridgeport on an express train.

Let me repeat that the upper Housatonic from Pittsfield to Falls Village is the best canoeing river in the world—even in spite of dams. From Falls Village to New Milford it is one of the most tiresome streams the canoeist can possibly find, unless indeed the trip is made when the river is high. Six inches more water than we had would have covered most of the rocks in the shallow rapids.

W. L. ALDEN.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Sciaenops ocellatus</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archosargus probatocephalus</i> .
Salmon Trout, <i>Salmo confinis</i> .	Striped Bass, <i>Morone lineatus</i> .
Land-locked Salmon, <i>Salmo gairdneri</i> .	White Perch, <i>Morone americana</i> .
Grayling, <i>Thymallus tricolor</i> .	Weakfish, <i>Cynoscion regalis</i> .
Black Bass, <i>Micropterus salmoides</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
<i>M. nigricans</i> .	Spanish Mackerel, <i>Cybinus maculatus</i> .
Muskellunge, <i>Esox nobilior</i> .	Cero, <i>Cybinus regale</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Bolito, <i>Sarda pelamys</i> .
Yellow Perch, <i>Perca flavescens</i> .	Kingfish, <i>Menticorax nebulosus</i> .

FISH IN MARKET.—RETAIL PRICES.—Bass, 20 cents; bluefish, 8; salmon, 25; weak fish, 10; Spanish mackerel, 20; green turtle, 10; halibut, 15; haddock, 6; king fish, 20; black fish, 12½; flounders, 8; porgies, 6; sea bass, 15; oels, 18; lobsters, 10; sheepshead, 20; Canada brook trout, 40; pompano, 25 cents; smoked salmon, 18; dry cod, 7; hard crabs, per 100, \$3 00; soft crabs per dozen, \$1 50.

Fish of all kinds very scarce, and prices have advanced materially. During the past week four specimens of the tarpum have been taken off Long Island, one of them, weighing 75 pounds, taken in Gravesend Bay.

CANADA.—Matapedia, July 24.—Good fishing here for the last few days. The recent heavy rains have caused the rivers to rise nearly two feet, and fresh-run salmon are taken every day, averaging all the way from twelve to thirty pounds. I took four fish yesterday and the day before, that weighed 24, 10, 14, and 12 pounds each.

S. H. K.

CANADA SALMON STREAMS.—Mr. Thomas J. Havemeyer, of New York, was salmon fishing on the Lower St. Lawrence last month, accompanied during the last few days by R. W. Cameron. Between June 11 and July 2 Mr. Havemeyer had thirteen days' fishing, excluding three Sundays and six days when it rained or the water was too muddy, in which time he took seventy-six fish, weighing 1,595 pounds and averaging twenty-one pounds. There was one salmon of thirty pounds and one of thirty-two; the best day's sport was Friday, June 28, when he landed fourteen salmon weighing 313 pounds. Mr. Cameron fished six days, landing twelve salmon, weighing 233 pounds and averaging nineteen and a half.

MASSACHUSETTS.—Bromfield House, Boston, July 26.—There has been a good deal of black bass talk here since the season opened, and as my party was said to have the best basket ever taken in one day from Massapoog Lake, Sharon, Mass., I give the score: One three-pounder, one two and a half, two of two pounds each, five of one pound each, and nine half-pounders. Smaller than that don't count. Our friend Morse, of Medford, took one last week of four and a half pounds from the same lake. Fishing parties who may visit the lake will find Capt. Thomas Decatur, of the Massapoog House, ready to furnish any information wanted. The number of sojourners at this delightful summer resort is daily increasing, and if Boston people generally knew of the attractions to be found on and about Massapoog Lake, Capt. Decatur's well kept hostelry would not be large enough to hold a respectable minority of the visitors during the vacation season.

M.

Nantucket, July 27.—Bluefish plenty, but the wind has been so strong that the boats could not go outside. Next week there will be splendid sport, as the wind has driven the fish inshore. Sharks quite plenty; the catch as follows: *Vesta*, 3; *Undine*, 1; *Norcross Brothers*, 5; Yesterday a party brought in a ball fish about five feet long, which they caught while sword fishing.

JOHN CUREW.

New Bank, July 27.—A party chartered the yacht *Metrick*, yesterday, and on the south side of Nashawena Island encountered a fine school of bass, taking 25, the largest weighing 44 pounds. Charles S. Raudall, Esq., caught one weighing 32 pounds at Cuttyhunk, this week; in fact, the south side of the islands are literally alive with bass and bluefish. The school of bass usually stay until the last of August.

CONCHA.

MOVEMENTS OF THE FISHING FLEETS.—The number of fishing arrivals reported at this port the past week has been 66, viz., 16 from the Banks, with 220,000 lbs. of codfish and 415,000 halibut, 45 from Georges, with 575,000 lbs. codfish, and 5 from Shore mackereling trips, with about 400 bbls. mackerel of inferior quality. Mackerel have made their appearance in this vicinity, and the boat and dory fishermen have taken small quantities, while amateur fishermen have fished good sport in their capture. The receipts of large mackerel have been confined to about 20 bbls. from Block Island, and with the exception of these and a few small lots of good 3s, the receipts have been confined to tinkers.—*Cape Ann Advertiser*, July 26.

RHODE ISLAND.—Block Island, July 26.—Three 50 pound bass were caught by Dr. Voris yesterday afternoon.

A. D. D.

PASQUE ISLAND CLUB.—Pasque Island, R. I., July 21.—*Mr. Editor:* Since our club opened, June 25, fishing has been excellent. The striped bass have been more abundant than for several seasons past. The largest so far taken being 30 and 31 pounds. There is great rivalry among the members as to who will be the fortunate one to take the largest bass, and thus gain the prize at the end of the season offered by the club. Our president landed a large black fish while fishing for bass, which turned the scales at 13½ pounds. One of our members struck a large bass a week ago that made one straight run until he had taken out all the line on the reel (900 feet) and then broke away. It was impossible to hold or turn him. We have all been conjecturing as to his possible weight. The writer has been here a week and has taken 117 pounds, the largest two weighing 24 and 25 pounds respectively.

July 25.—The writer had the pleasure and sport to-day of taking with rod and reel a striped bass weighing 60½ pounds.

LABRAN LILIATUS.

NEW YORK.—Baldwinsville, July 21.—Jack's Reef, Seneca River, at the mouth of the Big Ditch on Eel Wier Point, seven miles from here, is one of the best fishing points in this vicinity. Black and Oswego bass, catfish, etc., afford abundance and variety of sport. There are a number of camps there now, and success attends them all.

EELS.

ADIRONDACK TROUT.—Mr. W. E. Webb, of this city, caught in Meacham's Lake (Adirondacks), three of the largest speckled trout which have been captured in those waters for several years. They weighed five, three and two and a half pounds, and were sent to Vice President Wheeler. The rod used was a Holberton split bamboo, weighing a little over seven ounces.

A GOOD BASS COUNTRY.—When our angling friends start out to renew the summer campaign on their old tenting grounds, or to discover new fields of conquest and renown, we make it a point, as a matter of duty toward our readers, to hint that loyalty to the craft calls for a record of the trip for these columns. In response to such an exhortation, a correspondent writes thus enthusiastically of the piscatorial attractions of Greenwich, N. Y., under date of July 21:

I find myself in the heart of a magnificent bass country. Within a mile of where I am writing you can kill as fine a string of fish in a couple of hours, either with the fly or dobsen, as one need care for. Go north eight or ten miles and you strike Gifford's Lake, where are caught bass ranging from three-quarters of a pound up to three and a half, four, and four and a half pounds in weight. Further to the east Lake Cossayuna contains bass weighing from two to four pounds, and pickerel or muscallonge (whichever they may be is not fully decided as yet) running up as high as sixteen pounds. Then running across to Lake MacDougall you again find bass in abundance. Several New York and Troy parties have already been here, and they are still coming. Sportsmen should make Greenwich their base of operations, and thence branch out to the various points specified. Parties coming here can receive the best of accommodations, at most reasonable terms, by stopping with Mr. D. W. Maadell, a gentleman and sportsman—one of the Adirondack pioneers, and to whom one may apply for all information. In this quiet household one finds a home where his outgoings and incomings are governed by his own whim. My camp-meeting experiences recur to me, and I can now sing, with (*entre nous*) perhaps a greater appreciation of my blessings than then:

"This is the place I long have sought,
And wept because I found it not."

H.

NEW JERSEY.—Forked River, July 25.—Weakfish and barb biting well. Some of our boats to-day took as high as 100. No large bluefish for some time past, but plenty of small ones, running from 1 to 3 pounds. Some fine large sheepshead have been taken during the week.

ARTHUR.

PENNSYLVANIA.—Bradford, July 22.—That most delectable little fish, the trout, seems to make every little stream in this lively country his special home and delight. And no wonder. Water cold as ice, full of deep pools and sparkling ripples, shady banks and an abundance of food. What could a trout ask more? The Kinzua especially is worthy of notice for its trout, and, being little fished over, the sport to be had there is very good.

TUNA.

WHITE PERCH AT TOLCHESTER BEACH, MD.—Baltimore, July 23.—*Mr. Editor:* The steamer Pilot Boy is now making two trips a day to the celebrated beach of Tolchester, which has lately become as famous for its fishing grounds as years ago was the well-known Gersham Hall of our fathers, and during the warm weather the disciples of Izaak Walton are making daily visits, and are being well remunerated with magnificent catches of the finest perch of the Chesapeake. The fishing grounds are nearly opposite Gersham Hall, a few miles from Tolchester Beach, and are more commonly known as the deep shoals of Tolchester, and consist of a bar covered with oyster beds. Visitors to Tolchester can be accommodated with boats covered with awnings and accompanied with skippers, who have a thorough knowledge of the fishing grounds. During last week several well-known fishermen visited these shoals, and the catches of fish have been much greater than in former years. On Thursday last three different parties went aboard the Pilot Boy, and after two and a quarter pleasant hours' ride on the Chesapeake landed at Tolchester, and took sail-boats for the shoals, in order to enjoy a few hours' sport. One of the boats returned with fifty dozen white perch; the second boat, containing the party of Mr. Clarke, were compensated with seventy-five dozen, while the third party, which consisted of S. M. Webb and five other well-known fishermen, caught over one hundred dozen fine black-backed perch, and brought them alive in a box in fine condition to shore. This is extraordinary fishing, and considering the poor sport

of last season, seems almost incredible. The fish are caught with hook and line in twenty-five feet of water, while feeding on the oyster beds, and are far superior to the fish generally brought to market. I was one of Mr. Webb's party, and while catching the perch, two and three at a haul, I was reminded of "Artemus Ward's experience when in Salt Lake City." He was asked by a half dozen young widows to marry them, and when he respectfully declined the honor, they exclaimed with one voice, "It is too much." He thought it was the muchness of the thing he did not like. So, with the catching of perch on the above occasion, it was too much.

E. B. N.

VIRGINIA.—Bath Alum, July 26.—Trout fishing is excellent in the mountain streams near Bath Alum Springs. The fish are large and of fine flavor.

Winchester, July 27.—A bass weighing 6 pounds, caught in the Shenandoah by Mr. Leo P. Wheat, was brought to Winchester this week. It was the largest ever seen there.

WEST VIRGINIA ANGLING.—A bass weighing 6½ pounds was captured by Charles Harrison, of Romney, West V., last week. Mr. Harrison was crossing the South Branch on horseback and discovered the bass in very low water, alighted from his horse and killed it with a stone.

MISSISSIPPI.—Paulding, July 20.—If fish would only bite what a nice thing it would be to sit in the shade of some fine bay or magnolia and lure them with dainty bait this hot weather; but alas! joys come singly. We have bass (called trout here), bream, and perch for game fish, and I may add eels, catfish, huffalo, drum, etc., are also found here. There are no creels taken of consequence at present, owing to intense heat.

VAL.

WISCONSIN.—Ashland, July 21.—The continued heated weather has driven visitors here from every quarter. No less than fifteen different States are represented on the pages of the Chequamegon Hotel register for the past four weeks, showing that the attractions of this delightful resort are already popularly known. Guests are here from Massachusetts, Alabama and Colorado—east, south and west. Among them are many distinguished names. New York and vicinity is abundantly represented. Rev. Chas. Hall Everest and family, formerly of Puritan Church, Brooklyn, now of Chicago, are in town. Everybody goes fishing. Bass, pike and muscallonge are found in the lakes near by, and a dozen trout streams empty into the bay. The intense heat has interfered with anglers; nevertheless hundreds of pounds have been caught on favorable days. The weather is cool now, and hopes deferred are revived. Steam and sail yachts enliven the bay. The scenery is beautiful. No summer trip from the east can be more enjoyable than that by the great lakes, arriving either by the north or south shore and returning by the other. Visitors from sections not so accessible find the Wisconsin Central Railroad a comfortable route of access. Ashland is twenty-four hours from Chicago.

HAL.

THE LABRADOR AND COLUMBIA RIVER FISHERIES.—We are only too glad to learn from an interesting letter in the New York Sun that the reports of a bad catch in Labrador are unfounded. Quite to the contrary, the fishery on Labrador is pronounced very successful this season.

All the fleet is well supplied, and the weather has proved uncommonly propitious. The Newfoundlanders, however, still neglect to follow the advice of Prof. Hind, an attaché of the Colonial Government, who, in his extensive researches throughout the island and its dependency, Labrador, found that in the northernmost parts of the latter, which are never frequented by fishing vessels, cod, salmon, mackerel and herring abound in seemingly inexhaustible quantities.

From the same enterprising newspaper we have interesting data from the pacific coast. Last year the catch of salmon reached 1,250,000 fish, averaging 23 pounds, caught in some 45 miles of nets, set out every night. The 28 canneries on the river put up 450,000 cases containing 11,600,000 pounds of salmon last season, and about the same quantity may be expected this year. Fish cost now something like 50 cents. In former days, when canneries were not so numerous, they were worth 10 cents. In British Columbia and Alaska 5 cents is the price.

FISHERMAN'S PHILOSOPHY.—What cares the angler so long as the fish bite? A Philadelphia manufacturer was bluefishing at Barnegat the other day, when a telegram came, saying that his factory was burning up. The immediate reply was: "Building and stock fully insured. Bluefish taking the squid beautifully. Will return in course of a week."

Game Bag and Gun.

GAME IN SEASON FOR AUGUST.

Woodcock, <i>Phallophala minor</i> .	Red-backed sandpiper, or ox-bird, <i>Tringa americana</i> .
Black-bellied plover, ox-eye, <i>Squatarola helvetica</i> .	Great marbled godwit, or marlin, <i>Limosa fedoa</i> .
Ring plover, <i>Egialitis semipalmatus</i> .	Willet, <i>Totanus semipalmatus</i> .
Stilt, or long-shanks, <i>Himantopus nigricollis</i> .	Tattler, <i>Totanus melanoleucus</i> .
Red-breasted snipe, or dowitcher, <i>Macrorhamphus griseus</i> .	Yellow-shanks, <i>Totanus flavipes</i> .

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limicola* or Shore Birds. Many States permit prairie fowl (*plumbea grouse*) shooting after August 15.

OPENING OF THE SEASON.—The silence of field and copse was this morning broken by the opening shots of the campaign. To-day the patient waiting and law-abiding sportsman may reap to the full the reward of his discretion. From the scores of reports sent to us from different parts of the country and published from time to time in our game columns, we may infer an unusual amount of good sport this season.

quiver of arrows over his right shoulder, so that he
his arrows quickly. When he has discharged one ar-

Doctor pronounces arrow with a single letter; he calls it an R, with the same motion as he uses in pulling the string he clutches another arrow. If he shoots one hundred yards he has three or four arrows in the air, all going at the same time. It's great fun shooting at a bird with a long tail that flies over the prairie. Knock his tail out and his steering apparatus is gone. I have knocked the tail out of many a one, and so caught him in my hands when he tumbled. See here. Talking about these things just makes me long to be back again on the plains. New York is a mighty good place, and I have made lots of friends; but somehow I want a horse, and a big field with miles on miles before me to gallop over, and buffalo just a showing on the divide." And here Dr. Carver shut his eyes and seemed lost for a while in the visions of rolling prairies in the far-off western wilderness.

A CHAPTER ON ARCHERY.—*Mr. Editor:* It is impossible in this article to go into the history of archery, or even lay down all the necessary rules and directions for practicing the same, but there are some hints that can be given in this short chapter that will very much assist the beginner. Archery appears to have become very popular among us lately, owing a great deal to the charming articles written by Mr. Maurice Thompson. He has done more to introduce this splendid sport than any one else, and it is right and good that it should be so popular, for no other pastime has so much to be said in its favor. It is the healthiest, noblest and most graceful of all our out-door sports. Mr. Thompson has made some statements, however, in regard to bows which has surprised many archers. It is possible that he has never used a bow of Spanish yew, the lightest, strongest and most lively of all woods. Lemon wood, whether self or backed with other hard woods, makes a cheap and heavy bow, very little admired among archers. Italian yew comes next, and English yew last in the list of yews, but all of them are ahead of other woods. Mr. Thompson evidently has never handled any of that prince of maker's bows and arrows, viz., T. Aldred, of London, or he would not praise so highly some other makers. Get the best bow you can afford—it is the cheapest in the end—but do not overweight yourself with too heavy a weapon; it will spoil your aim and cause you to shoot wild.

To String the Bow.—I believe it is impossible to teach this simple thing by words. It is better to get some friend to show you. Do not attempt to copy the lady in last week's *Harper's*. The action, as shown in the print, is decidedly wrong. The proper way is to place the lower end of the bow against the left side of the right foot, which should be slightly advanced, grasp the plumb with the right hand, and pull toward you, while at the same time push from you with the left hand the upper end of the bow. When bent enough, slip the loop in the nock with the thumb and first finger. Always remember to bend the flat side of the bow out. Now place the arrow on the string at right angles with the bow, stand perfectly erect, with the left side toward the target, looking straight at it over the left shoulder, extend the left hand fully, with the bow firmly grasped, toward the gold, and see it to the left of the bow, draw back the arrow and string with the two first fingers, and as soon as your hand touches your cheek bone let it go quickly. Look at the target intently, but not at the arrow, which, by the way, should rest to the left of the bow. The position in Thompson's book, "The Witchery of Archery," I deem faulty. The archer faces the target instead of standing with the left side toward it.

Best bows for ladies are those pulling from twenty to thirty pounds, and gentlemen from forty to sixty pounds. The regular distance for ladies to shoot is from fifty to seventy-five yards. Gentlemen shoot from seventy-five to one hundred yards. Beginners must commence at ten yards, and increase the distance as soon as they can hit the target twice out of three arrows. The necessary implements are the bow, arrows, arm guard, glove, quiver, target and stand, and a tassel to wipe off the arrows. Be careful to shoot on a lawn where the grass is short, for arrows hide in the most wonderful manner, causing much vexatious delay.

W. HOLBERTON, President Oritani Archers.

LACROSSE.—Last Saturday, at Prospect Park, Brooklyn, the Prospect Park Lacrosse Club won two goals of lacrosse to one by their opponents, the New York Athletic Club team.

CRICKET.—This is a whole week of cricket in the immediate vicinity of New York. Monday, the Peninsulars, of Detroit, Mich., played the St. Georges at Hoboken; Tuesday, the Peninsulars played the Staten Island Club; yesterday, the St. Georges met the Merions, of Philadelphia, at Hoboken; the same clubs play again to-day; the Peninsulars play the Germantown Club at Philadelphia to-day, and again to-morrow; Friday and Saturday the Merions play the Staten Island Club.

PENINSULARS VS. ST. GEORGES.—In a match at Hoboken last Monday, between the Peninsulars, of Detroit, Mich., and the St. Georges, of this city, the former were easily successful, and displayed much strength in bowling, batting and fielding. It should be explained that among the absentees of the St. George Club were Messrs. Soutter, Croas, J. R. Moore and Jones, three of their strongest batters and the club's swiftest bowler. The score is as follows:

ST. GEORGES.		Peninsulars.

Umpires—Messrs. Smith and Young.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

J. L. E., Palestine Bridge.—See article in to-day's issue on spraying.

E. J. S., Bedford av., Brooklyn.—Excellent hotel at Secoon Lake

B. L. H., Hollidayburg.—Address Fowler & Fulton, 300 Broadway, New York, about the ball.

M. J. S., Vermillion, La.—It is incurable. Dog never is worth anything. We advise getting rid of him.

R. D., Kingston, Adams Co., Mass.—We can send it to you, second-hand, in good condition; postpaid for \$1.50.

A. D. S., Fort Johnson, N. C.—Messrs. Fowler & Fulton, of 300 Broadway, New York, are the agents for the Fletcher brass ball.

SKEPTIC, New York.—The Murel is a cutter, pure and simple. Go see her, foot of Twenty-fourth st., East River, and convince yourself.

G. S., Buffalo.—About Lindsey, Ont., you will find deer, duck, partridge and snipe shooting. Black bass, muscalonge and other fish in plenty.

C. H. W., Hamilton, Ind.—Would like to know which is the best shell (paper shell) in use for breech-loader. Ans. American shells are excellent.

L. D. LEROY.—1. Your 32-inch rifle might be cut to 30 with impunity. 2. Would advise Western Texas and a sheep ranch. Could not give you address.

T. W. B. New York.—We can obtain for you a map of the Thousand Islands, published two years ago, for \$1.00. There is no map of the eastern side of Lake Ontario, etc.

R. B. G., Portland.—The new work on yachts by Mr. Dixon Kemp will be reviewed at length in our columns, when you can judge for yourself whether it is suitable for you or not.

WHITE, Rawsonville, Ont.—If you read Mr. Hallock's letters you may from them learn just what railroad and steamboat lines he takes on his present trip. To repeat them here would be needless trouble.

J. L. R., San Antonio.—The firm you mention is perfectly reliable. They have attended to your case at our suggestion. Numbers of papers containing articles on boat building have been sent as requested.

CHESAPEAKE, Baltimore.—Give me a remedy to rid my kennel of fleas. Although I scrub my kennel it is infested. Ans. Lime or insect powder will destroy them if the kennel is kept clean; use a small amount of carbolic acid in the water you scrub with.

T., Baltimore.—Mr. W. L. Alden is one of the original founders of the New York Canoe Club. This organization is in a flourishing condition. There is ample opportunity for extensive canoeing in Baltimore waters and vicinity. Would advise you to get a Shadow canoe, as designed by Mr. Alden.

HUNTER.—The obstacle to making a fortune by market hunting is the difficulty of communication between the game country and the markets. The State of Texas, as you will often see in the accounts of our correspondents, is a good country for game. If you could send your game to a suitable market.

R. L. G.—1. Four men shooting rifle at target for prizes; score counted string measure. A makes one shot no B's target and claims another shot. B objects and they leave it for your decision. 2. Are there rules governing string shooting and where can I get them? Ans. A loses. 3. No rules save custom.

W. E. H., North Manchester.—How does the shot manufactured by — of New York compare in quality with — and other first-class makers? Ans. Very favorably. We may say that is shot. No manufacturer now can put shot which is not spherical on the market. Seconds are sold, but then they have no name put on the base.

QUILLDRIVER, Milford.—What cal. pistol and length of barrel is used, or required by rules for fine target practice rifle, and is trigger pull limited? Can you send any printed rules for such practice, etc? Ans. Pistols not limited as to cal., but must not be over 12 inches long. The 22 cal. Stevens most in use; plain sights. Trigger pull not limited. No rules.

D. W. C. P.—Curare is very difficult to obtain and is only procurable from specialists. It is worth 10 cents a grain. We have not the least confidence in its capability for curing hydrophobia any more than with asparagus tops. Read the paper, which gives full details about hydrophobia and what has been done for it. You might obtain curare in Boston.

V. & Co., Warren, O.—My setter pup, 6 months old, has a large lump formed on his neck under his jaw, has come within last five days, his hair is also coming out, and to-day for first time refuses to eat. What is the trouble, also what shall I do for him? Ans. He is probably having distemper, and should be systematically treated for the disease. Your question about gun not received.

ROD AND GUN, Buffalo.—Have a valuable setter pup, 3 months old, which is troubled with continuous itching. The hair is coming out rapidly from behind his ears, over his eyes and around his feet. It is not caused by vermin. Can you tell me what ails my dog, and a remedy for the disease? Ans. Very probably has lice. Use Kerosene on the parts afflicted, and then wash with castile soap and water.

T. D., Utica.—In your last edition you publish an account of worms in puppies, and you say, "we publish Mr. Wannmaker's ideas with pleasure. But worms exist in the puppies when they are born, even before birth. Parasites are discoverable in innumerable creatures when in utero." Will you be kind enough to state the reason? Ans. In such cases it is through the blood of the mother. See Kennel.

C. E. W., New York.—After the distemper my setter puppy had a strange jerking of the legs. What shall I do? What is the matter. Ans. Your dog has St. Vitus' dance. Give him 1½ grain of quinine, with ½ grain of nuxvomica in a pill three times a day. Keep him in the open day. Every third day open the bowels with castor oil; small doses. Try and build him up. We regret to say that the chances are against a perfect recovery.

J. C. S., Philadelphia.—My bitch had a nt, and then allowed her pups to draw milk from her. Will it hurt puppies? Please give best receipts for its and distemper. Ans. The pups are very likely to be affected in such a case. There is no "receipt" for distemper or its any more than there is for typhoid fever in man. Distemper is a form of disease which requires systematic treatment in accordance with symptoms as they develop.

C. McJ.—Use ½ inch oak for a lee board for your canoe. About 30 inches long, 16 wide on bottom and 8 on top. Round off corners and chamfer down edges. A neat method of shipping it is to have two

hooks or plates near the top which are to fit into corresponding holes, or sockets, brass lined, in the deck. You can then readily lift it from side in side when you go about. Strengthen the upper part which receives the hooks by having it ½ inch thick, or by nailing with copper rivets a piece across the top 4 inches wide.

W. E., St. Dams, Ontario.—1. What is the lowest price of "Hallock's Gazetteer" mailed to a Canadian post office? 2. Also, what are glass balls per dozen? 3. What is the best material to make a tent out of? How is it to be made, one that a person can carry? Ans. 1. Three dollars. 2. Two cents each. 3. Canvas or thick drilling, or duck will do. Cut a single piece 15 feet long and 10 feet wide, then when in the woods, select a sapling of 15 feet, support this on two uprights and stretch the cloth over it, securing the bottom with pegs. Better go in an awning maker.

C. B. C., East Saginaw.—A catamaran of the most approved type is a very complicated structure, owing to many iron braces and stays, and as all these have to be shown on plan, the charge for the latter is high. Herreshoff controls the patent for flexible joints, and without these it is doubtful if the catamaran would be a success. You may write to George Roark, boat builder, Harlem, who may do better with you. See answer to "F. C." of East Saginaw. If possible we will publish designs later on, but cannot afford time and trouble at present during busy season.

C. M. F., New York.—The essential points in which the cutter differs from the sloop are, less beam, greater depth, and ballast. This renders such boats much easier in a seaway than the flat sloop, while they are absolutely "uncapizable." You may put their mastheads under water, and yet they will right. Their rig differs by having the mast stepped nearly amidships, and cutting the sloop's jib into two smaller and, consequently, handier sails, one called the foresail or forestaysail, and the jib. This reduces the length of main boom. Bowsprit and top mast are always fitted to house.

J. R. S., St. John, N. B.—Do you consider Spratt's dog cake a good permanent diet, whether during the shooting season or otherwise, and what quantity would you consider a fair daily allowance for a medium sized field spaniel? Ans. A good food, but not used constantly day in and day out. Two to three biscuits at a meal is a fair quantity. They may be soaked in a little water over night. When in the field a provision of Spratt's biscuit is very valuable. We prefer Spratt's biscuit for the first meal we give a dog. Sometimes the biscuit scours the dog, especially when he is confined.

G. G., Montreal.—A man who builds and rigs boats for a livelihood is a professional, according to rules adopted by National Association of American fishermen and other clubs, etc. Placing a man on the whiskers on board is certainly to be considered as coming within the spirit and letter of Rule 21, Sailing Regulations of Montreal Yacht Club, nor does the plea of saving the mast justify such "planking out," for the mast should have been secured by means within the laws and rules of the club. The boat which sent and kept a man out on the whiskers forfeits her title to any prize.

F. C., East Saginaw, Mich.—You will find dimensions of catamarans in our No. 16, Vol. X. No plans have been published. Every builder follows his own bent pretty much. To make a successful catamaran it is necessary that the hulls should not be rigidly connected, but have flexible or universal joints. Upon the latter, Herreshoff, of Bristol, R. I., has a patent. To use it you must apply to him. He charges very high for a set of plans, because they are quite complicated, on account of the many iron braces, etc.; but you can readily enough build a craft according to your own ideas by following dimensions given in our paper. Can send you a sketch (not plan) of one for \$2. It will show general arrangement, etc.

GUNNER, Providence.—1. What would be the result in loading a 7 lb. double gun, 11 gauge, muzzle, laminated steel barrels with 4½ drams best coarse powder and 1½ oz. shot, each barrel in the ordinary manner? 2. Where can I get "Fur, Fin and Feather," and when does the next edition come out, and the cost? 3. In your Gazetteer "Rules for Handling Guns" it says after firing one barrel the cartridge is to be taken out of the other to see if the charge has shifted. Please say whether this is really practical, and is it necessary. 4. Is there any possibility of loaded shells exploding when carried around the body? What part of the body should the belt cover? 5. What is your opinion of — shot gun? Ans. 1. A first-class kick, nothing more. 2. Address "Fur, Fin and Feather," New York. August. 3. If you use brass shells, examine the gun, if paper shells no matter. 4. None in the least. Around the waist. 5. A very good arm.

C. H. B., New Britain, Conn.—There is no special work upon yachting signals extant. Yacht clubs have adopted different codes, some Marryatt's, others Acker's, etc., but the International code is displacing all others, as it enables vessels of different nations to communicate. It is published in book form, and can be procured from the Bureau of Navigation, Navy Department, Washington, D. C., or we can get it for you. If you refer simply to club signals they are only of two kinds. Each club adopts a pennant according to its taste, this to be hoisted at the "fore" on schooners, and on the masthead of sloops. Each owner adopts his private colors, which he flies at the main of a schooner, or in place of the club flag on a sloop. All yachts must carry the Government yacht flag—the American ensign, with foil anchor surrounded by thirteen stars in the blue field. See club books of yacht clubs. For "Practical Boat Building" by Nelson, write to Van Nostrand, 97 Murray st., N. Y., and mention our name.

P. F. G., Amesbury.—1. What is considered a full choked gun? Is there any standard? or, in other words, how many No. 8 shot, 1¼ or Dixon's measure is a full choked gun supposed to put in a 30in. circle at 40 yds.? 2. How much would you consider a gun choked that will put in 425 No. 8 shot, 1¼ or Dixon's measure, 40 yards—30in. circle? Is it not more than is called full choked? 3. Is it an established fact that a full choked gun will throw shot harder than a cylinder gun, everything being equal as to powder and shot, same gun, one barrel full choked, other cylinder? Think it will. 4. Which grain (or number) a very fine grain or coarse grain of any kind of powder will give the highest velocity and best penetration, and which will give best pattern? (This question has been argued to considerable length in our club.) 5. Is it considered necessary to use two pink-edge wads over powder to get hard shooting? 6. Is not a full-choked gun liable at any time (with best of care in loading) to give a very poor pattern, what we call open, centre? Ans. 1. Two-thirds of the counted pellets is a fair rule. 2. Not the effects of a full-choke. 3. People seem to think so. Penetration pads look that way. 4. The finer grained the powder the greater the penetration. 5. Two pink-edge cartridges do give better effects. 6. No. There ought to be no irregularity.

THE COMMON SENSE CHAIR.—To look at this chair one would not believe it to be such a reliable and praiseworthy source of comfort as it really is. Talk of real comfort, why one does not know what it is until one has settled down into one of these chairs, with an interesting book, or a cigar, or, happily, both. One may praise the stuffed chairs endlessly, yet of one thing the fortunate possessor may be sure—that his Common Sense Chair is the most inviting and satisfactory resting place he can find. This opinion of the chair a new purchaser will con firm enthusiastically.—[Adv.]

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2332.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, AUGUST 1, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, Aug. 2.—Trotting at Buffalo, N. Y.; Freeport, Ill.; Sullivan, Ill. Base ball: Worcester vs. Star, at Syracuse; Springfield vs. Buffalo at Buffalo. Running meeting at Saratoga.

Saturday, Aug. 3.—Beverly Yacht Club Regatta of Swampscott; Duxbury Yacht Club Regatta. Base ball: Chicago vs. Indianapolis, at St. Louis; Cincinnati vs. Providence, at Providence; Milwaukee vs. Boston, at Boston; Worcester vs. Utica, at Utica. Running meeting at Saratoga.

Tuesday Aug. 6.—Chelsea-Lakeman four-oared rowing match, at Boston. Trotting: Richfield Spa, N. Y.; Rochester, N. Y.; Prophetstown, Ill.; Piqua, O.

Wednesday, Aug. 7.—Beverly Yacht Club Regatta, at Beverly; Northwestern Amateur Rowing Association Regatta, Detroit, Mich. Trotting as above, and at Mansfield, O., and Charlotte, Mich.

Thursday, Aug. 8.—Atlantic Yacht Club Regatta, at Greenport; N. A. R. A. Regatta as above. Trotting as above.

DRAFTS AND MONEY ORDERS.—We wish it distinctly understood that all drafts, checks and postal money orders sent to us should be made payable to "The Forest and Stream Publishing Company." By observing this rule our subscribers and advertisers will save us much needless annoyance.

OUR YOUNG AMERICAN NATURALIST.—There is no reason why Mr. Fred. Ober should not attain very shortly the same position in the United States as that now enjoyed by Mr. Wallace in Europe. Already well known throughout the country for his explorations in Florida, first published by us, Mr. Ober, like a second Stanley, has been pushing through the wilds of South America, if not combating human foes, at least struggling with malarial diseases quite as deadly as those found in Africa. Urged by a love of natural history, Mr. Ober has risked his life a hundred times.

We are pleased to announce that we have made an arrangement with Mr. Ober for the publication of his adventures and explorations in South America and the West Indies. These articles will embrace the traveler's experiences in monkey hunting, in deer and wild guinea fowl shooting, with his life among the Caribs. The whole of his discoveries in ornithology will be exhaustively treated. As may have been of ed

in our last issue, Mr. Ober's contributions to natural history have been most important, as Mr. O. N. Lawrence, who has been engaged in arranging the birds sent by our young naturalist to the Smithsonian, estimates that ten entirely new birds have been found by Mr. Ober. We have no doubt that these letters will excite general interest. We trust some time in September to commence this series. We may add that abroad the work already done by Mr. Ober has attracted general attention. At last dates our correspondent was in Martinique, slowly recovering from a dangerous attack of fever.

UNITED STATES FISH COMMISSION.

THE following is the *personnel* of the U. S. Fish Commission, now at Gloucester: Prof. Spencer F. Baird in charge; Department of Invertebrates, Prof. A. E. Verrill, assisted by Mr. B. Rathbun; Department of Fish and Fisheries, Prof. O. Brown Goode, assisted by Dr. T. H. Bean. Marine plants will receive the attention of Dr. W. O. Farlow. The vessel, the *Speedwell*, will be in charge of Commander L. A. Beardslee, U. S. N. Dr. J. F. Brandford is Surgeon, Mr. Oalt, Engineer, and Mr. Drury, Paymaster. Capt. H. C. Chester, of Polaris fame, will have the dredging operations in charge. Mr. H. E. Rockwell is Secretary of the Commission. Records of temperature will be kept by Mr. A. Hall. Officers and men on the *Speedwell* number thirty-four, and there are fifteen members in the scientific party.

The work is continuous. Trips are to be made every day in the *Speedwell*. On board there is ample space for study and examination. As a supplement, however, a loft has been fitted up at Fort Wharf, in Gloucester, where specimens can be preserved and examined at leisure. The business of dredging, and arrangement and study of specimens will continue until the middle of September. Excursions will be made some fifteen to twenty miles out from Gloucester, and, if time and opportunity allow, the Georges will be visited. Formerly the headquarters of the Commission were at Woods Holl. It is quite possible that new varieties of fish not found in more southern waters will now come under observation.

The importance of the work now under the direct superintendence of the Secretary of the Smithsonian Institution can hardly be appreciated. The method of investigation is a purely scientific one, and not empirical. Nothing is left to hearsay. Before any fact in regard to a fish is stated, every circumstance having to do with the advent or departure of the fish is freely studied. The many complex phases which surround fish are compared, and all the forms of plants and animals which are found in the waters are observed. Microscopic observations are as useful as the more positive and practical details of capturing fish. It is the thorough sifting of a whole mass of careful observations which only finally brings out the positive data. The country is to be congratulated in having at its command so much intelligence, zeal and perseverance. If the character of the work is, to many, apparently scientific, the results it gives us are of the most practical character. What the U. S. Fish Commission wishes to do amounts simply to this: To study thoroughly the whole question of food fishes in American waters; to account for their being plenty at one season and scarce at another, with the greatest ultimate end of increasing not only the food of our own people, but of the world at large. Every step we make in advance is of benefit to those engaged in the same researches abroad. We may be justly proud of the work already done by the U. S. Fish Commission, and may anticipate some notable results as crowning the campaign just opened this year at Gloucester.

"THE WITCHERY OF ARCHERY."

There is a pleasant alliteration about that phrase. It is the title which Mr. Maurice Thompson has given to his book on the game of archery, and we are inclined to believe that there must be a literal witchcraft about this pastime. How else could it have sprung so suddenly into such popular favor? A year ago no one but very small boys thought of bows and arrows and targets. Now there are hundreds of archery clubs of men and women; and from Cape Cod to the Golden Gate enthusiastic devotees of the quiver have gone back to the primitive sports of their pre-historic ancestors. No sportsman's emporium is now complete without a full assortment of archery outfits, equally suitable for the warlike equipment of a howling, naked savage, or for a merry party of laughing school-girls. Great staring targets of blue and gold confront us on the street corners, the monthlies make room for the narrations of archery experts, and the weeklies are out with full-page illustrations of pretty girls drawing the winged shaft to its head. Sir Izaak, who has hitherto held his place without a rival in the sportsman's calendar, must look well to his laurels and his fishing-hooks, or he may find his popularity shared by another canonized patron, that apostle of the twanging string, Sir Roger Ascham, in his day, doubtless, a very cross bean, but in these latter times destined to be a great favorite with the fairer sex. At the earnest solicitation of numerous of our readers, especially of the ladies, whose appeal our gallantry and discretion forbid us to pass unnoticed, we have consented to devote to the game of archery such space as our friends may demand. We do this with the distinct avowal that our allegiance to the worthy patron of all fishermen, who presides over those papers which are devoted to interests piscatorial, is to be in no way diminished or altered. We must also express our most earnest hope that archery amateurs will not follow the culpa-

ble advice of Mr. Maurice, and perfect their skill by the indiscriminate slaughter of our feathered friends. Besides being contrary to common sense, this destruction of insectivorous birds is happily forbidden by our laws. We are surprised that author and editor should have permitted such instructions to mar what is otherwise a delightful volume.

MIDSUMMER JAUNTS OUT WEST.

BY THE EDITOR.

JAUNT THE THIRD.

ASHLAND, WISCONSIN.

MESSRS. EDITORS: After a pleasant week on Lake Winnebago, which I reached by the Chicago and Northwestern Railroad *via* Janesville, I ran up here on the Wisconsin Central to the shores of Lake Superior, 251 miles farther north, where the heat of the torrid term has been tempered by gentle breezes. The place is thronged with visitors; the Chequamegon Hotel with its supplementary cottages being filled, while the smaller hotels and boarding-houses are enjoying a fair patronage. For a region that was made accessible by rail and steamboat only one year ago, Ashland may well congratulate herself upon the reputation which she has already secured as a summer resort, and the promise held out to her of its permanent establishment. With increased facilities of communication by water between it and the Canadian shore and northern Michigan, no known region on the face of the globe will offer such numerous and varied attractions; and I predict that in the course of a brief period all the anticipations of the most hopeful will be realized. The Pictured Rocks, the Apostle Islands, Thunder Cape, Isle Royal, the Nepigon, and the great mines of copper and iron, will be thronged as the St. Lawrence and the Adirondacks never were. Yachts will whiten the indenting bays; anglers thread the rapids of the ice-cold water-courses which empty the wilderness lakes; hunters track out the paths which lead to the haunts of the deer and bears. Where do summer ramblers find their rest and quest now? Only in the North Woods of New York; on the St. Lawrence; at the White Sulphur Springs of Virginia; on the waters of the upper Mississippi; and at the seaside places. And are not all these circumscribed in comparison with that grand territorial expanse of woods and water which embraces Lakes Superior, Huron and Michigan, with all their marvelous physical belongings? Their bosoms are as broad and trackless as briny oceans, and one may start from Collingwood in Canada or Buffalo in the Empire State, and travel continuously on a mediterranean tour as fast as steam can move him, until the waxing moon has fulfilled and waned, and repeat no portion of the cruise. At Thunder Cape, on the threshold of Manitoba, is the Dawson water route which penetrates to Hudson's Bay; at Duluth is the portal of the great Northwest; there is the Georgian Bay with its multitude of islands; the Sault Ste. Marie which chafes the boundaries of two dominions; the weird tracery of the elements upon the south shore rocks; the interior lake system of northern Michigan; the ancient island of Mackinaw and the old French mission; the Wisconsin wilderness, and the Apostle Islands, each of which is a little domain by itself, the smaller ones like coronas of foliage on pedestals of red sandstone upreared from the floor of the deep lake. The Grand Rapids and Indiana Railroad leads directly to one of the most favored points on the lake coast, and the Wisconsin Central to another. The round trip to be made by steamer from Petoskey on the Michigan peninsula, through the Mackinaw strait into Huron, thence into Superior *via* the Sault Ste. Marie; thence along its entire southern shore to Duluth, touching at Marquette, Houghton, Ashland and other intermediate points, and returning to the north shore, would have no parallel on either continent. At present the route is imperfectly served, but if visitors multiply as they have done within a twelve-month, inducements will be ample to prepare a schedule with special reference to summer passenger travel and the time-tables of the Northern Pacific, Wisconsin Central, Chicago & Northwestern (at Marquette) and the Grand Rapids & Indiana roads. All these outlying railroad lines, which reach out from the central system like the tentacles of a cuttlefish, in search of sustenance, have been built at great expense to overcome natural obstacles; and we believe that those same natural attractions which prompted their construction will prove to be the best means of reimbursement. The prices of boarding and the transportation tariff are so low as to more than compensate for the long distances to be traveled; so that it is vastly cheaper for the citizen of distant New England to spend two months on the lakes than at Narragansett Pier, Long Branch, Saratoga, Lake George, or the Thousand Islands. With the bottom fact that the average rates at the Western resorts are but \$2 per day and \$12 per week (!) the anxious inquirer can readily compute the saving to be made. Housekeepers can close their domiciles and make money. What the scenic and climatic attractions are to the tourist I propose to define in my present series of letters; but the story will be long. To make my narrative consecutive I must pick up my trail where I left it near Staunton, Virginia, last month, in my transit of the Blue Ridge on the line of the Chesapeake & Ohio Railway, as described in my second letter. I will delay only to suggest that any Eastern sportsmen purposing to visit the coming Dog Show at St. Paul, Minnesota, early in September, will do well to take the lake steamers from Collingwood, Buffalo, Detroit, Chicago, etc., to Duluth. Although the time of the journey will be a trifle longer, the cost will be less and they can bring in their dogs in better condition than after a long, cramped journey in a baggage car. They will have an opportunity to examine and select the

best shooting localities along the route, at which they should stop on their return. For deer, bears, ducks, geese, pigeons, ruffed grouse, rabbits, squirrels, woodcocks, snipe, and all small game except quail and prairie fowl, the whole lake shore stands supreme and unfrequented. By leaving the steamer at Ashland, Wisconsin, or at Marquette or Petoskey, in Michigan, the sportsman can enjoy forest shooting, and thence move south by rail into the celebrated duck and chicken regions of Indiana and Illinois. I take occasion to give these hints now, for it will be long before I reach this part of Wisconsin in the course of my narrative. My letters lag, but I move on.

The Blue Ridge.—The mountain range of Virginia where the Chesapeake and Ohio Railroad crosses it, is of the most romantic character. From Staunton, among the hills, to White Sulphur, the road crosses valleys, ridges, and streams transversely; beyond, it follows the deep cut channels of rivers, and the sinuous bottoms of ravines. High mountains and precipitous crags hedge it in, their jagged outlines sharply marked upon the narrow ribbon of blue sky above the rushing rapids. It is a continuous Delaware Water Gap for miles. If one could stand on the summit of the great dividing ridge, and looking to the right and left, watch the progress of the train, he would see it toiling up steep grades, dipping into sombre valleys, crossing rivers and viaducts, and horing through rocks like a teredo. Crags bristle all around; great boulders choke the river beds; gnarled trees hang by their roots to ledges; dark-colored torrents foam and struggle among the rocks; ramparts of stone cross the route and project into the air. The whole enterprise was noted for its stupendous engineering difficulties; but still the road persists. Nothing impedes or intercepts. It hores, it goes around, it spans, it spurs, it clings to precipices, it balances on dizzy apices, it climbs, it slides down. At the Great Bend Tunnel, near Taleott, it leaves the daylight, and does not emerge from darkness until it has traversed a subterranean passage of 6,400 feet in length! Superficial dwellers who are curious to know what exists in the bowels of the earth far beneath them can be gratified by taking a look into the hole. All the country around is full of iron and salt and coal, mineral springs of sulphur and alum gush out in every direction. Deposits of ice from great caves run under the earth. Fossil forms of organisms which once lived and breathed the air above lie becombed, inanimate, "froze to stone." It is a weird country. Wedged into some of the ravines are great blast furnaces, which belch and glare like vents of Tophet, and redden the night. Coal-pits smoke and smudge, and the atmosphere is heavy with lamp-black. The breath of Vulcan is hoarse as he toils and sweats. There is very little agriculture among the crags, and few homes save those of hunters and toilers in the furnaces and mines. But here and there, scattered about in the nestling valleys are the healing springs which make this region famous as a summer resort; pretty cottages and merry music enliven the sombre aspect, just as the sun lights up the gloom of the gorges when clouds are drifting across the sky. Narrow winding roads lead out from the railroad track, down which old-fashioned creaking coaches rumble for a moment, and then disappear, lost to sight in the woods. The distances to the springs are various, some extending to thirty miles. No less than thirty springs and hotels are mentioned in the guide books, but perhaps for that reason the most popular are the famous White Sulphur Springs, which I hardly need describe for Southern readers. They are 227 miles from Richmond and 194 from Huntington, on the Ohio River. The situation is elevated, being 2,000 feet above tide-water. The buildings occupy a natural basin, which is laid out in lawn and shaded walks and drives, the main building occupying the centre, and ranges of white cottages the rim of the basin at a convenient distance from the hotel. The main building is one of the largest in the country, being 400 feet square. The dining-room is 300 feet long, and seats 1,200 persons, and the parlor is nearly as large. It is so wholly unlike summer hotel structures in the north as to be a novelty to northern people. It is as remarkable for the primitive character of its appointments as for the *neglige* of its guests. No carpets interfere with the circulation of air in the chambers, and the walls are superfluously white. To make a full toilette the ladies must depend upon the large mirrors in the parlor. Nevertheless the table is good and the beds clean and comfortable. One can be as comfortable here at \$3 a day as at Brother Beckley's little inn by the wayside near Kanawha Falls at \$1.50 per day.

The Kanawha Falls wash the stone doorstep by which we cross the threshold of the mountain region on the west. At the portal the clear, pure water of the higher region tumbles over a ledge which extends a thousand feet across the river, and mingles with the roily and clay-stained tide below. Above the falls are rapids, crags, boulders, gorges, and a wilderness. Wild beasts roam in the forests and mountain trout disport in the streams. Below, the river glides with a smooth, unbroken flow to the muddy Ohio, its shores lined with cultivated fields and pretty towns. Between White Sulphur Springs and the Falls lies the choicest and wildest scenery of the route. Far up in the mountain heights of the intermediate range are the little tributary streams which help to form the Greenbrier, the Ganley and the New rivers, and these two last, uniting, form the Kanawha, a short distance above the falls. The whole tract looks as though there had been rough horse-play among the giants. The whole New River channel is filled with the boulders which they have hurled at each other across the chasm, so that the choked river can

hardly run in some places; long, straight trunks of pines, split and shattered in their tilts, have been flung into the r. Walls of precipice flank the passes; they jut into the channel-way, and tower above to dizzy heights. Overlooking all are the Hawks Nest cliffs. The whole region is full of interest to the tourist, the geologist, and the sportsman. Kanawha Falls is a favorite resort for anglers. At the foot the black bass, the wall-eyed pike, and white perch gather in great schools, barred from further passage upward. I have seen the head of a bass which weighed nine pounds, and the head of a wall-eyed pike which weighed thirteen pounds. Beckley, the proprietor of the hotel, will show these specimens to the curious. Within easy distance by foot or rail, one can fill his basket with speckled trout. Altogether, I know of no place where better facilities of access are afforded to such a variety of sport. I caught both bass and white perch with the fly. Being high up in the mountains, the air is cool and bracing, and any one who wants snug quarters and plenty of elbow room might as well stop here as go farther, for he will find nothing like it until he reaches the foot-hills of the "Rockies."

I was most romantically lodged in a front room of the inn. Directly in front is a mountain, with just room enough at the foot for three tracks. Up among the trees, half way to the top, is a boulder, which looks as if it would slip and fall down into my room. The sun rises behind that mountain, and it is 9 o'clock before he looks over the top to see what is going on in the valley. When his rays rest on the cool stratum of air on the bottom, a mist rises, and the orisons of the day begin. Farther out, away from the shadow, men have been at work for hours in the saw-mill which stands by the placid lake, at the foot of the falls. By mid-day it is hot, and grain ripens in the sun which was needed to mature it.

It rained the whole afternoon of the day I arrived. A tree-frog, squat in the foliage opposite, had told me it would, and so I did not go out to fish. When the up and down trains halted in front for dinner, we sat under the porch and watched a "razor-back" pig dodge among the car wheels in quest of bits of food which the passengers dropped from the windows. Presently the cars began to move, and it was amusing to note the agility with which he escaped being crushed. The trains backed and pulled ahead so frequently that bets began to be made that he would be run over. Odds of 100 to 1 were offered that he would not. I put up until I lost a quarter, and then quit. After that there were no takers. The pig was alive when the train left, and when I was bantered by Judge P—that a man who had traveled so much should bet on a depot pig, I allowed that I had been induced to bet because I observed that the pig's tail was short off at the rump, and assumed that he once before had a close squeak of it. I have learned wisdom from experience.

But my letter grows long, and I have given only an inkling of what is to be seen on this road, which took nearly forty years to construct, it having been begun in 1836. The points of interest are almost as numerous as the stations marked on the time schedule. When my vacation is finished I shall return by the same route, and perhaps find new subjects along the line for comment. Passing Charlestown, the capital of West Virginia, and reaching the Ohio River, we boarded one of the steamers of the Chesapeake and Ohio Railroad Company, and began our 350 miles sail down the river to Louisville, where I dated my first letter. The current of cool air, caused by the motion of the boat, was most grateful to us as we sat in the bow, and the constantly shifting scenery and the novelty of the river made the trip most charming. The boats are large and well appointed and well patronized. I was surprised to hear that passenger travel by river was increasing instead of waning, as I had supposed, and that there had recently been constructed, at some town in Indiana, two steamers, which were larger and more magnificent than any previously launched. I am pleased to hear this, for I think the time is approaching when Americans will not take their vacations at railroad speed nor make a business of pleasure. A day at Cincinnati broke the monotony of the trip, and when I reached the chief city of Kentucky I was convinced that my choice of routes had been wisely made.

From Louisville I made post haste, via Indianapolis to Chicago, fleeing from the heat of the first days of July, and thence in twenty-four hours more was landed at the snug hostelry of friend Roberts on Doty Island, at Neenah, Wisconsin, whence I dated my second letter. Lake Winnebago, where Roberts is located, deserves an extended notice, and to it I shall devote a portion of my fourth letter. It is a charming and much patronized resort, and is reached by the Chicago and Northwestern Railroad.

HALLCOCK.

THE HUNGRY VISITOR FROM FLORIDA.—The name on the card was familiar, and he was from Florida: enough to insure his speedy admittance into our innermost sanctum. In he came, shuffling rather than walking, a most scaly looking being; and there was that in his general bearing which was far from prepossessing. Floridians are not apt to be stunted in growth. Our visitor was six feet if he was an inch. But in some way he had not filled out, had not expanded laterally. Just at that particular part of his body where a man's stomach is supposed to be, we say it without exaggeration, our visitor was no bigger around than a very medium fence rail. Surmounting this ridiculous body was a little oblong head in which two very small fiery eyes gleamed with a strangely repellent light. But the most forbidding feature of his countenance was the mouth. If we had doubted that our visitor was starved a glance at his mouth would have reassured us. It

gaped wide open, the tongue darted forth and the jaws were fixed asunder, chronically stretching for a monthful.

"No," he explained in a sibilant hissing voice, "not a regular subscriber of the paper. In the swamp where he lived the mail communications were so interrupted that it was hardly worth while to subscribe for a weekly paper. He took his chances, and usually good ones they were too, of picking up a stray copy of the *THE FOREST AND STREAM* from some of the sportsmen who every winter penetrated to his secluded home. Being upon a northern trip and happening in the city he had come to call upon us, as he had been told every one did when they came to New York. Not having eaten anything for several weeks, thought perhaps we might direct him to some reliable place where he could get a good square, solid meal once more. His last refectory away down in that Florida swamp had been a young alligator and a discarded green glass bottle. The strengthening juices of the alligator had long since been assimilated to his system, but the bottle, though possessing rare staying qualities, was not decidedly nutritious. We perhaps knew just the place where a hungry Florida-swampian might find something to his taste."

Could we resist that appeal? Throwing down our pen and doffing our hat we conducted this hungry individual from Florida around to Wallace's, and, having safely deposited him in the taxidermist's shop, were rewarded by a beautiful coiling of his whole body, a fiery glance of the bright little eyes, a hissing of thanks and a grateful sounding of the rattles—there were just thirteen of them. He hungers no more. He's stuffed.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

Tennessee State Sportsmen's Association, Nashville, Dec. 2. Sec'y., Clark Pritchett, Nashville, Tenn.
Wisconsin State Sportsmen's Association.
Massachusetts State Sportsmen's Association, at call of President
Missouri State Sportsmen's Association.

SUPERVISORS AND GAME LAWS.—Relative to our opinion, recently published, concerning the authority of supervisors to alter the game laws, Chas. E. Whitehead, Esq., council of the New York Game Protective Society, writes us as follows:

You are correct in your interpretation of the law. I drew that section so as to appease county members who wished to protect black squirrels, bull pouts and muskrats, and you will find that some of these outside families have been covered by the shield of the law in the hands of supervisors who were interested in them. But supervisors cannot shorten or lengthen the close season of game which is protected by the general statute. Yours, etc., CHAS. E. WHITEHEAD.

NATIONAL SPORTSMEN'S ASSOCIATION.—Wilkes Barre, Pa., July 27.—*Mr. Editor:* Pursuant to adjournment the next meeting of the National Sportsmen's Association will be held in the rooms of the Philadelphia Sportsmen's Club, northeast corner of Thirteenth and Chestnut streets, Philadelphia, at 12 M., of Tuesday, September 17, 1878, and we now call upon all State Associations and others who are interested in protection of game and fish to send representatives to this meeting.
B. F. DORRANOR, Sec. pro tem.

OFFICIAL LAW BREAKERS.—It not infrequently happens that our game and fish protective laws are not only not enforced by those whose duty it is to secure their proper observance, but are openly violated by those same delinquent officials. This is a case in point where some one with a not very unusual amount of common sense should agitate the matter and correct the abuse. A correspondent writes from Charleston, S. C., July 23:

Mr. Editor: Fishing in the Embarras River has not been very good this spring with the rod and line. The water was too high and muddy until the 15th of June, when the water was low and clear. The pot-fishermen took full possession of seines, snares, spears, traps, channel nets, trot lines and shooting. The people grumble because the river is not full of fish, and they allow this wholesale slaughter of fish to go on year after year. I believe the city and county officers are the worst violators of the game and fish laws that we have.

J. B. D.

TOO MANY FISH.—Ashburnham, Mass., July 22.—*Mr. Editor:* I notice in your issue of June 27 last, your correspondent from this place refers to some fine catches of trout taken here in this town. This occasioned some little surprise to myself and others who have fished these streams for many years and claim to know their capacity, etc. Therefore, from unquestioned authority (that of the parties themselves), I regret to say they were taken in a very unsportsmanlike manner. This affair came to the notice of the proper authorities, and efforts were and are being made to prosecute, I trust successfully. Perhaps, however, the parties are sufficiently punished now, as I understand they are heartily ashamed of their action, and have come to a realizing sense of the fact that the extermination of trout could not be more effectually accomplished than by the method practiced by them.

MANX.

The Rifle.

THE NEW JERSEY STATE RANGE.

The several towns throughout the State of New Jersey have shown no lack of interest in the matter of rifle practice. Rifle clubs, principally short-range ones, have been organized by the dozen, and some very good teams have come out of Jersey to show their skill on other ranges, while of single marksmen, at long as well as at short-range work, many noteworthy names will suggest themselves. With the opening of the new State range at Brinton these bodies will find a central stamping ground, and can now spend their effort in building up about "Brinton" a fame and a name. Since early in the

year a few gentlemen have been working along at the task of organization, and on March 11 the New Jersey State Rifle Association was incorporated, and now is provided with a roll of over 100 actual members, and the following list of officers: President, Col. Edw. H. Wright. Vice-President, Capt. Wm. H. De Hart. Secretary, Peter Bonnett. Treasurer, H. F. Anderson. Directors—Maj. Henry Fulton, Dr. J. M. Dart, George A. Squire, B. A. Vail, Hon. Dudley S. Steele, H. F. Anderson, Peter Bonnett, Col. E. H. Wright, Capt. Wm. H. De Hart, A. R. Warner, J. T. B. Collins, E. A. S. Man, Capt. George L. Winn, George Carter, Major Addison Thomas. Honorary Life Director, Gen. George B. McClellan. Ex-Officio Directors—Major-General Gershom Mott, commanding N. G. S. N. J.; Brevet Major-General Wm. S. Stryker, Adjutant-General S. N. J.; Brevet Major-General Lewis Perrine, Quartermaster General S. N. J.; Brigadier-General Joseph W. Plume, commanding First Brigade S. N. J.; Brevet Major-General Wm. J. Sewell, commanding Second Brigade S. N. J.; Col. W. H. Sterling, A. D. C., General Inspector of Rifle Practice N. S. J.

The selection of a range location was a delicate and important choice. After looking at several plots it was decided to fix the range at a point on the meadows between Elizabeth and Elizabethport, on the line of the Central Railroad of New Jersey. The grounds are about 100 acres in extent, and, having a broad stretch of salt meadow behind the targets, there is no necessity for high banks or huts.

Brinton—named such out of compliment to Geo. Brinton McClellan—has its merits and its demerits. There are a plenty of mosquitoes, but there is also a fresh salt breeze from the broad Newark Bay near by. Compared with Creedmoor—the beau ideal of all American ranges—there are advantages and disadvantages about Brinton. The broad velvety lawn of the American Wimbledon, where at any target shooting may be done at any range, is wanting at the Jersey range, and in its place is a scrubby bit of upland, sloping away after a run of 600 yards to several thousand yards of marsh or meadow land. The line of fire looks off toward the Newark Bay, northeast by east, a disadvantage for early morning practice. At some of the high ranges long, low mounds have been thrown up to bring the prone marksmen up to the level of the target. These mounds are broad enough to accommodate the scorers, spotters, and the apparatus the marksmen may need in his practice. In time the Range Committee hope to have the entire upland section of the range placed under sod, and create of it a fine camping lawn. The mid-range huts are before an embankment about 150 feet long on the edge of the upper or dry meadow. This arrangement brings the entire line of mid-range and short-range fire over dry land, and firing points from 100 to 600 yards are staked out. Further to the left the place of the off-hand huts is staked out, but as yet none have been thrown up. The targets are of canvas, stretched upon wooden frames, and slide vertically, while the markers stand in an open pit before the depressed targets. Off to the right are the long-range firing points. The line of fire here runs over a long stretch of sedge and bulrush meadow before reaching the low mantlet huts of plank bulkheads filled in with broken stone. The targets stand upon a platform, and each marker is masked behind a smaller bulkhead of plank and stone. The targets slide on rolling chocks, a fresh target going out as a punctured one is drawn in. These are of canvas. The natural advantages of the place are inferior to those of Creedmoor, but it will prove a formidable rival to the former, owing to the regularity and frequency with which trains stop at the ground. Way trains to Elizabeth run every half hour in the morning, and more often still in the afternoon, and with a liberal list of regularly recurring matches the Brinton managers need few fears of lack of patronage.

The opening day was set for the 25th ult., and several hundred marksmen, with a few million mosquitoes, attended during the afternoon. Creedmoor was well represented in its marksmen, as well as by representatives of its Board of Directors. There were many distinguished local guests. Upon the arrival of Major-General Gershom Mott, commanding the 3,000 men who constitute the National Guard of the State, a salute of thirteen guns was fired. Accompanying Gen. Mott were Col. Loder, Col. Ward, Col. Welling and Maj. Duryee, of his staff; Adjutant-General Wm. S. Stryker, Brigadier-General Plume, of the First Brigade; Col. Wm. H. Sterling, the Division Rifle Inspector; Col. Morrill, of the Third; Col. Steele, of the Fourth, and Maj. Sloan, of the Seventh, and members of the State Legislature. Gov. McClellan, who is at Cape May, sent a note of regrets. Of the directors of the association there were present Col. Wright, President; Captain De Hart, Vice-President; P. Bonnett, Secretary; Maj. Henry Fulton, Dr. J. M. Dart, George A. Squire, B. A. Vail, Dudley S. Steele, J. T. B. Collins, E. A. S. Man, Capt. Geo. L. Winn, Geo. Carter, Private N. P. Stanton, of the National Rifle Association, Gen. Alex. Shaler, Capt. Story, Col. Geo. D. Scott, J. P. Waters and Secretary Geo. S. Schermerhorn, of the Board of Directors of that body, with Chas. Pond, of Bridgeport; Adjt. W. H. Murphy, O. E. Overbaugh and Capt. Waddell were also present. The range was opened by a long-range match for a commemorative medal, struck in honor of the opening. Considering that the range had never yet been fired over, the scores made were very fair. Two sighting shots were permitted at each range. The scores ran:

	900 yards.					1,000 yards.				
W Gunn.....	4	5	5	4	5-23	5	3	5	5	5-23-46
H Geiger.....	5	5	5	5	4-24	3	5	5	4	5-22-46
H Fisher.....	3	5	5	5	5-21	3	5	4	8	5-22-43
R Rathbone.....	2	5	5	5	5-22	5	2	4	4	4-19-41
O McLaughlin.....	4	4	5	5	4-23	0	3	5	5	5-18-41
I L Allen.....	5	4	4	4	4-21	5	0	8	6	5-18-39
C Dusenberry.....	18					19			17	50-40
G L Morse.....	19		17	86	J A Harty.....	19			30	29-40
C A Hodgman.....	16		19	55	N D Ward.....	11		11	22	22-40
F H Holton.....	11		20	81						

A subscription match at 200 yards afforded sport for a large number of the visitors, though somehow the scores did not show anything extra brilliant, running as follows:

G T Carter.....	29	J H Greys.....	26	E T Davis.....	22
C A Watson.....	22	B A Vail.....	26	C A Stevens.....	22
J F Bathy.....	23	Chas Garser.....	25	S A Miller.....	21
W P Wood.....	23	Com J G Hill.....	24	H C Howsell.....	20
A Gibbs.....	28	W Haddenburt.....	23	Col Howard.....	20
J S Conlin.....	23	G M Townsend.....	22	J J Dermott.....	19
B Squire.....	27	C H Houghton.....	22		

The Directors' match, also at 200 yards, for the gold badge of office, was very generally contested for, and with one or two good off-hand shots the race for first place was closely fought. The President very courteously took place in the rear, but in this he was followed by the State Inspector of Rifle Practice, who came within one point of getting that position. The Directors' scores ran:

T B Collins.....	22	Dr J M Dart.....	19	Gen J H Plume.....	13
B A Vail.....	21	Gen M J.....	16	Col W H Sterling.....	9
George Carter.....	21	P Bonnett.....	16	Col E H Wright.....	8
Maj Henry Fulton.....	20	Capt W H De Hart.....	15		
Geo L Winn.....	19	Geo A Squire.....	15		

It is the intention of the State military authorities to institute practice by the State troops at a very early day, and, with the close proximity of such a railway centre as Elizabeth, no trouble will be met in conveying the men to and from the grounds.

SHARPSHOOTERS' UNION OF THE UNITED STATES.

MR. EDITOR: In the meeting of the delegates of the associations of the Sharpshooters' Union of the United States of North America, to the third national shooting festival, held June 16th to 24th, a committee was appointed to revise the constitution of the Sharpshooters' Union, and to call a meeting of delegates in 1879 in this city. The committee, then appointed by the President, J. A. Bauer, of San Francisco, Cal., consists of the following gentlemen: Herm. Raschen, Jac. Heintz, Aug. Ernisch, C. Matman, G. A. Kundahl, Ch. Zettler, H. Schalk, F. N. Matt and C. Froman. Pursuant to a call of Mr. B. Lippmann, secretary of the meeting of June 19, (this committee had its first meeting July 18th inst., in the headquarters of the Union, 197 Bowery,) an organization took place by the election of the following officers: President, Capt. A. Ernisch, of Jersey Schuetzen Corps; Vice-President, Ch. Matman, Pres. of Helvetia Rifle Club; Secretary, Jac. Heintz, Sec. of Columbia Rifle Association. One of the members of the committee having resigned, Mr. B. Lippmann was elected to fill the vacancy. The committee will have regular meetings every fourth Thursday of a month.

The following German shooting societies will have their annual shooting festivals in August or September, as far as could be learned:

August 6—Hudson City Schuetzen Corps, Capt. Henry Blum, in Union Hill Schuetzen Park, Union Hill, N. J.

August 6, 7, 8—Brooklyn Schuetzen Corps, Capt. John H. Doscher, in Myrtle Avenue Park, Brooklyn, E. D.

August 7, 8—New York Central Schuetzen Corps, Capt. C. F. Gennerich, in Jones' Woods Colosseum and Washington Park, 67th to 69th street, Avenue A, New York city.

August 13, 14—Jersey Schuetzen Corps, Capt. Aug. Ernisch, in Union Hill Schuetzen Park, Union Hill, N. J.

August 19—Rheinischer Schuetzen Bund, Maj. F. N. Matt, in Bender's New York Schuetzen Park, cor. First avenue and 63d street, New York city.

August 26, 27—Greenville Sharpshooters, Capt. A. Zenger, in the Schuetzen Park, Greenville, N. J.

September 2—Ninth Ward Reform Schuetzen Club, President Wm. F. Schneider, in Elm Park, 92d street and Ninth avenue, New York city.

September 8, 9, 10, 11—Twenty-fifth anniversary of Helvetia Rifle Club, President Ch. Matman, in Schuetzen Park, Union Hill, N. J.

September 9—Bohemian Schuetzen Corps, Capt. F. Wokal, in Bender's New York Schuetzen Park, 63d street and First avenue, New York city.

September 9, 10, 11—New York City Schuetzen Corps, Capt. J. F. Gerdes, in Jones' Wood Colosseum and Washington Park, 67th to 69th street, Avenue A, New York city.

S. O. V.

[FROM OUR OWN CORRESPONDENT.]

THE FIRST WEEK AT WIMBLEDON.

WIMBLEDON, July 13, 1878.

EDITOR FOREST AND STREAM:

With a week of the great rifle meeting now past it is very safe to call it a complete success. Many of the eighteen previous July gatherings have been occasions of great pleasure and high scores; but in weather, interest, numbers, etc., the nineteenth annual meeting has surpassed all. There has been rain, but during the shooting hours, at least, the weather has been dry and fine, the light has been good and the wind not over troublesome. But few changes have been introduced this year. The six inch bull's eye at the 200 yards targets has been abandoned and the old eight inch bull's eye placed again upon the targets. Canvas targets are now used in all the competitions at all ranges and for the Queen's Prize. In place of using Snider rifle for the first stage at 200, 500 and 600 yards the Martini-Henry rifle is now employed throughout. With a superior weapon comes of course superior scores, as will be seen below.

Wimbledon after all is something more than a mere shooting stand. It has a strong social aspect. Men from every section of the country cannot live together in this canvas town for several weeks without forming acquaintances, and when those associations are renewed from year to year it is not strange that they should look upon each other as lifelong friends.

American riflemen particularly should know now what this great rifle encampment is, since after it the National Rifle Association of America is shaping its course. For a full fortnight each year the great inclosure at Wimbledon Common springs up as if by magic, finds for a few days its thousands of inhabitants and then away, as in a dream, go tents and tent-dwellers, flags, fence and all, leaving only the common with its stunted shrubbery, and away to the west the long, low mounds against which the targets are displayed. It was to this range that the American team found time to pay a flying visit in 1875 after the Irish victory, and it is from this range that the great cementing power goes forth which keeps thousands of British riflemen, scattered the world over, in one great body of hard working marksmen. Life here is a busy one. Between gun-fires, from early in the forenoon until six o'clock in the evening, the business of the meeting takes precedence over all things else—the men are at the firing points straining every nerve, or scurrying across the common to get in a few shots here or there in this or that competition. One is hurrying to take his place on the line at a bull's eye target, a sort of sweepstakes contest, merely to try the elevation which his judgment tells him fits the condition of light, moisture and wind. He fires most carefully, but hits low, and forewarned, he "goes up half a point" and, with his opening shot in some other competition at the same range, gets in an opening bull's-eye in place of the "maggie." So on, all day long; but when evening comes relaxation runs rampant. From a dozen camp-cantens comes the sound of musical instruments; the band of the Victorias gives an open-air concert under the

great umbrella tent, 150 feet or more in diameter, wide away from some Scot's tent come the shrill notes of the pipes. Along the members' lines are tents which, in their luxurious outfit bespeak the wealth of the occupants who make of the Wimbledon meeting a fortnight's vacation. There is nothing like it in all Britain, and perhaps a great American camp meeting will give the clearest idea of what the Wimbledon gathering is.

The staff at Wimbledon shows few changes. The Earl of Wharncliffe is at the head and Col. Peel, whom you will all remember in his association with the British team under Sir Henry Halford, is again the Executive officer. The old campers are here on the Association lines as well as on the more pretentious members' camp. The London Irish are missing, but the Canadians are at their old spot, and doing good work before the targets. The running deer has been made to perform as a leaping or galloping game by a cone arrangement on the platform. Capt. Midway has devised a torpedo target by which when the bull's-eye is hit a railway track torpedo is exploded. The apparatus occasionally gets out of gear. The telephone is working finely between the long range targets and firing point, and there is now talk of putting it on all the ranges ere another year to replace the present telegraphic system.

I will not burden you with many scores, not at least for this week's work, where the shooting is mainly for prizes open to Volunteers only. In my next I will tell the story of the Elcho Shield match, and of the small-bore work, which you can compare with what your own champions are doing, and, by the way, "they say" that the Irish are going to carry off the great Elcho again. Certainly they have a very strong team and their visits to America have not been thrown away. According to the competitive selection test the Irish team show more strength than either the Scotch or English. I came here on Saturday last before the date fixed for the opening of the harmless hostilities. Already there were hundreds in camp and, according to the *Morning Star*, 1,560 volunteers spent that night in the camp and rose on Sunday morning for a quiet day's rest before the work of the week. There was service in camp and during the day no end of visitors, though the mid-week Sunday, that is to-morrow, will bring down the herds of Londoners to wander about the grounds and envy the men their comfortable quarters.

Monday morning came out beautifully clear, and the crackling rifles were heard all along the mile or more extent of firing points. The Council have declared that leather elbow caps are not to be allowed "in" uniforms, but cap-covers may be worn on the head without cap below. The helmet headgear is not in much favor, as the men find that either in the hack or front position the helmet ends are in the way and obstruct the sight.

America is not entirely unrepresented here. In the exhibition tent is an American Gatling gun, working with dummy cartridge, to the admiration of crowds of visitors, while W. M. Farrow and John, of Creedmoor fame, are here making excellent work with the Ballard rifle.

Farrow and John are on their way to the Dusseldorf meeting in Germany. John, you remember, holds your *Spirit of the Times* badge, while Farrow was the "Schutzen-koenig" of the Union Hill gathering last month. The conclusion of the first stage of the Queen's Cup prize should have finished with Thursday night, but when the scores were aggregated it was found that three men tied for top place on scores of 95 in the possible 103. That this means extra good shooting is shown in the following exhibit of what has been done in the past five years of the present style of scoring:

1874—Corporal Young, 1st Hert.	87	105
1875—Private Innes, 10th Aberdeen.	90	106
1876—Private Burgess, 1st Newcastle.	86	105
1877—Corporal Betts, 1st Norfolk R. V.	92	105

Also Silver Medalist in 1870.

And while this fight was going on for the first place among the "sixty" who are to contest at the 800, 900 and 1,000 yards for the final gold medal and the £250 cash prize, there were twenty-five scores of 88 each for the last eight places on the "sixty." With the settlement of the Queen's prize, first stage, the work of many of the volunteers who came here closes, and Thursday evening saw a grand exodus in all directions from the camp; but there are small-bore men coming in, and the teams are gathering for the final test of next week.

The firing off of the ties for the first place and the silver medal perhaps induced many to linger to see the pretty triangular contest which took place before the Carton target yesterday morning. The three co-equal champions were: Sergeant Lamont, 1st Edinburgh; Private Lowe, 22d Middlesex; and Corporal Mollineux, 40th Lancashire.

In telling the story of this tie shooting I use the words of local chronicler, who says:

Half an hour before the marksmen appeared to test their prowess once again eager groups of volunteers and visitors were crowding in ranks four deep around the enclosure facing the Carton butts, where the last scene of a struggle closer than any previously seen at Wimbledon was to be enacted. No puzzling wind or deceptive light gave the competitors cause for anxious glances towards the fluttering flags that are sometimes such useful wind gages, nor furnished an excuse for erratic shooting such as unsuccessful men always find when bull's-eyes are blurred by mist and mirage. If the rifle wavered it was not because of wind, but of the tremulousness which was caused by beating hearts and nerves not firmly strung, and if the targets were seen dimly it was not due to changes in the clear light which fell full on the targets and brought them into strong relief from the dark background of turf and heather, but rather to the faintness of vision that sometimes marks a moment of anxious excitement. Around the three who were to fire for the proud position of first place in the sixty interest centered and asserted itself so strongly that a space wherein the trio might be free from jostling and the disturbing sounds of audibly expressed comments was kept with difficulty. Whether the competitors had caught something of this excitement, or whether the suspense of long waiting had been too much for them, only one bore evidence of being calm, cool, and self-possessed. The two north-countrymen stood apart in grim silence, and tried to appear unconcerned, while the Middlesex champion cheerfully exchanged greetings with his friends, as if either perfectly confident of success, or prepared to bear the reverses of ill-fortune contentedly. Somebody having intimated that the competitors might utilize their shots by taking carton tickets, which would give them a chance of winning an additional prize if they scored a central bull, Lowe went off quickly to avail himself of the suggestion, evidently feeling that he was in the condition for straight shooting; but the others seemed disinclined to risk a "bawbee or two" in the speculation.

By this time a great crowd had gathered at the firing point, the range was signalled "all clear," and Lamont lay down to fire the first shot. There was a long pause before the rifle could be steadied, but at length he pulled, and friends with binoculars and field-glasses looked in vain for any sign of a hit on target or butt. "Where did that go?" was the question when the marksman slowly came back to his friends, reluctantly convinced that he had missed. A cheery comforter suggested, "Well, maybe it's just gann over the bank," and then the Scotch contingent leaped into silence or stood ready to claim Mollineux, who is said to be Glas-

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of more, \$3 per annum.

JOHN BONE, THE IMMORTAL.—He deserves the title; he has earned it. John Bone lives in Texas, of course; that's where they all live. He has been repeatedly shot dead in his tracks by infuriated mobs; wild Indian tribes have alternately tortured him to death, clubbed the life out of him and transfixed him with poisoned arrows; he has been hung as a horse thief; fatally injured by the explosion of a kerosene lamp; stung to death by rattlesnakes; crushed to a jelly by bears; immature drug-clerks have by mistake administered all sorts of deadly poisons to him, which have repeatedly proved fatal in their effects; he has been mortally wounded in six railroad collisions; and twelve lightning-rod and book agents have as many times talked him to death. And now the sheriff is after John to kill him again for a fresh crime. He doesn't mind it much himself, and thinks that when he is a little more used to it he may come to enjoy it.

"**OLD ABE.**"—And now it has come to light that the eagle, which we all saw at the Centennial, and expended a deal of sentiment upon as the veteran war eagle that went with the Eighth Wisconsin Infantry through the smoke and grime of the four year's war, is a sham and a fraud after all. The genuine "Old Abe" died years ago. The present unlawful occupant of his perch is a *de facto* "Old Abe," who was fraudulently counted into his place by a returning board of impecunious rascals. Those blue-uniformed attendants who talked so eloquently of their war exploits and took in the money of the interested and gullible listeners—we wonder if they were frauds too, veterans who had never been within hearing of the echoes of a battle.

—What is the difference between South Side, L. I., and New York on a night? Spreads and sheets.

—While Mr. Eeher was making one of his celebrated runs at billiards a few nights since, two street gamins were intently watching him through an open window. After he had scored about 150 one of them turned to the other with a perplexed expression on his face, and quick speech, "Say, Jim, where is the other man?" He evidently thought it took two to play billiards.

DOGS WITH ANTI-PATHIES.—Crib, a wonderful dog, described by his proprietor as "an enemy of poachers, a friend of cats, and a connoisseur of gooseberries," while regaling himself upon his favorite fruit, fresh from the hush, got stung by a wasp, bent upon gooseberry taking too, and experienced a new and never-to-be-forgotten sensation. Crib became convinced his vocation in life was to wage war upon wasps, and from that time devoted all his energies to their destruction; and, taking up an advantageous position under the bushes he and his enemies most effected, snapped them as fast as they appeared without getting hurt himself. He, at any rate, had reasonable and just cause for the antipathy he indulged, which is more than can be said in extenuation of the irreligious collie, whose habit it was to sneak out of his master's company as that gentleman took down his *Family Prayers* and rang for the servants. Purposely prevented one evening from making his usual exit, Noble took such pains to behave indecorously that it was judged wisest to let him have his way for the future; and he was never known to make one of the nightly gatherings again—*All the Year Round.*

ADVICE TO DRINKING MEN.—A drinking man can supply himself easily with the remedies used at nearly all the inebriate asylums and be his own physician at his own home, without the necessary expense and publicity of visiting the Washingtonian home or any other reformatory institution. His laboratory need contain only a small quantity of cayenne pepper, a pot of concentrated extract of beef, and a few grains of bromide of potassium. When the desire for drink recurs, make a tea from the cayenne pepper, as strong as can be taken with any degree of comfort, sweeten it with milk and sugar, and drink. This tea will supply the same place that a glass of liquor would fill, and will leave no injurious effect behind. Repeated daily or so often as the appetite returns, it will be but a few days before the sufferer will have become disgusted with the taste of the pepper, and with the appearance of the disgust disappears the love of liquor. The fact is proven every day. The extract of beef is to be made into beef tea, according to the directions on the pot, in quantities as may be needed for the time being, and furnishes a cheap, easily digestible and healthy nutriment, it being made "to stay on the stomach" when heavier articles of food would be rejected. The bromide of potassium is to be used carefully and only in cases of extreme nervousness, the dose being from fifteen to twenty grains, dissolved in water. This is a public exhibit of the method of treatment adopted at the inebriate asylums. In addition thereto the drinking man should surround himself with influences which tend to

make him forget the degrading associations of the bar-room and lift him upward. He should endeavor, so far as his business avocations will permit, to sleep, bathe and eat regularly and obey the laws of health. By the adoption of this course energetically and sincerely no man who has the will to reform can fail to do so. Hundreds and thousands can attest the truth of these statements.—*Boston Traveller.*

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of **Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac**, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase. **UNION SQUARE, NEW YORK**

APOLLINARIS NATURAL Mineral Water.

HIGHLY EFFERVESCENT.

APPROVED by the Academie de Medicine of France, and its sale in France authorized by special order of the French Government.

Recommended by the highest Medical Authorities in New York as

"A great relief for seasickness."

"A delightful beverage. Mildly antacid, most grateful and refreshing."

"Far superior to Vichy, Seltzer, or any other."

"Absolutely pure and wholesome; superior to all for daily use; free from all the objections urged against Croton and artificially aerated waters."

"Impregnated only with its own gas."

"Healthful and well suited for Dyspepsia and cases of scurvy disease, and where there is a gony diathesis."

"By far the most agreeable, alone or mixed with wine, useful in Catarrhs of Stomach or Bladder, and in Gout."

"Not only a luxury, but a necessity."

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and wholesale of

TESTIMONIALS:

The instructions embrace everything that can be
desired. Taking it all in all it is the most complete
book that has been published on the Adirondacks,
not excepting even my own.—Hon J. T. Hoadley.

I regard your "Descriptive Guide" and the "Ap-
pendix" as a most useful, nay indispensable,
manual for tourists to that wonderful wilderness.
A tour in that region is eminently a practical mat-
ter, and for that reason I regard your "Guide" as
an important, useful and timely publication.—Ben-
son J. Lossing.

It is the only thing of the kind that has yet been
published—the very thing that has been so long
wanted and waited for.—Alfred H. Street, Author of
"Woods and Waters."

THE LATEST AND ONLY CORRECT
Treatise on the Game Cock.

The undersigned will issue a publication entitled
"Treatise on the Game Cock," as soon as prac-
ticable after June 15, 1878.

The work has been compiled by Mr. F. W. McDon-
nell, whose long experience as a breeder and trainer
of Game Coocks especially for the pit, is a sufficient
guarantee as to its reliability.

Its purpose is to introduce a new and thorough
treatment in breeding, rearing and training the Game
Cock. It will contain such information, and will be
so serviceable to fanciers and breeders that it will
be indispensable to all, and will be preserved as a
book of reference for years.

A few pages of the book will be reserved for ad-
vertisements at prices within the reach of all. We
give every advertiser books enough to pay for his
advertisement. Send for circular.

Fanciers and breeders subscribing for the book be-
fore the same is printed will have their names in-
serted in black type, in the pages reserved for that
purpose, with the variety of stock they raise, for 35
cents (which entitles them to a book). Price of book,
ten cents. Address,

McDOUGALL BROS.,
64 South Illinois St., INDIANAPOLIS.

ANTI-FAT

ALLAN'S ANTI-FAT is the great remedy for Cor-
pulence. It is purely vegetable and perfectly harm-
less. It acts upon the food in the stomach, pre-
venting its being converted into fat. Taken in
accordance with directions, it will reduce a fat
person from two to five pounds per week.
"Corpulence is not only a disease itself, but the
harbinger of others." So wrote Hippocrates two
thousand years ago, and what was true then is now
the less so to-day. Sold by druggists, or sent, by ex-
press, for \$1.50. Quarter-dozen \$10. Address,
BOTANIC MEDICINE CO., Prop'rs, Buffalo, N. Y.

SPORTSMEN,
TAKE IT EASY.
Common-Sense

CHAIRS AND ROCKERS.

My Reading and Writing-Table
is separate from chair, and is se-
cured in position by a strong but-
ton. Is easily adjusted to nearly
all kinds of arm-chairs, but
should be used on my No. 4, 5,
or 13, to give complete satisfac-
tion. Table can be set at any angle desired, or
lowered to read position for writing. Make a nice
table for an invalid. Culling-bureau for the ladies.
None of your little 7x9 affairs; but 16x33 inches.
Cannot be got out of order.

My chairs and Rockers are made upon humor,
stamped and warranted. Are unsurpassed for com-
fort and durability. The favorite seat in the best
houses of our land. See that my name is stamped
on chair before purchasing.

Send stamp for illustrated price-list.

Painting.

PAINTING.

EVERY ONE THEIR OWN PAINTER.

50 Per Cent. Saved.
We are manufacturing a very fine Pure Ready-
mixed Paint, mixed in such a manner, that any ordi-
nary stable or farm hand can make as good a job
painting as a painter can with paint mixed in the old
way. This is because our paint does not set quick,
and thus show marks of the brush. We sell it lower
than materials can be bought in the ordinary way,
and pay freight on certain sized orders.

Any one wishing to Paint, will have mailed from
upon application, our book—"How Every One can
Paint and Select Harmonious Colors." Address
INGERSOLL PAINT WORKS, South and Dover
streets, New York.

Gunpowder.

THE
HAZARD POWDER CO
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of
strength and cleanliness. Packed in square canis-
ters of 1 lb. only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and
6 1/2 lb. kegs. A fine grain, quick and clean, for
upland prairie shooting. Well adapted to shot-
guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters
and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest or water shooting, it
ranks any other brand, and it is equally serviceable
for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFG, FFG, and "Sea Shooting" FG, in kegs of 25,
12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also
packed in 1 and 1/2 lb. canisters. Burns strong and
quick. The FFG and FFG are favorite brands for
ordinary sporting, and the "Sea Shooting" FG is
the standard rifle powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON & MUSKET POWDER;
ALSO, SPECIAL GRADES FOR EXPORT, OF
ANY REQUIRED GRAIN OR PROOF, MANU-
FACTURED TO ORDER.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 32, 38, or 44, as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1873. Send for a Circular and Price List.

THE WINNING GUN.

At the International pigeon shooting, Monaco, Feb., 1878, the Grand Prix de Casino, an objet d'art valued at £160, and a money prize of £700, this the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Cholmondey Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 23 yards and 1 foot and 23 1/4 yards. He also won the second event, killing 8 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. J. Purdy, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 56 birds out of 61, using one barrel only. The winning gun also at the great London One Trial, 1876, beating 103 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 163,323. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's-Works, Birmingham, England.
H. C. SQUIRES, Agent, No. 1 Cortlandt Street, New York City.

Hart's Sportsman's Favorite Metallic Shells. FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any shell now made, giving a solid seat for cone or avul, which prevents it from driving through or springing away, thereby causing miss-fire. The Cone is made of nickel, and fastened solid in its place. Neither rust nor corrodes fast like iron made from steel. The Nickel Cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These Shells are finely finished, and made any length ordered, from 2 1/2 to 3 1/2 inches. Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses HART & SLOAN, Newark, N. J. throughout the country.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA.
MEASURES, GEORGE E. HART & Co.—Gentlemen: The fifty Shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter.
Yours truly,
A. H. BOGARDUS.

FIRST PREMIUM, CENTENNIAL EXHIBITION—REPORT—"Exact uniformity of size, truly spherical form, high degree of finish and general excellence."

Medicinal.

BRANDRETH'S PILLS.

We believe these celebrated pills are pre-ordained by their inherent merits to be the medicine of the world. They impart a power by which every organ of the body becomes healthy. Nature has formed the bowels so that they are capable of drawing to them the impurity of any organ of the body, however distant. So we have little more to do when we are sick than to purge freely with a medicine time has proved will not hurt. This treatment always quickly restores the health when adopted in time.

BRANDRETH'S PILLS

cure both constiveness and diarrhoea. Ask the man who was dying from constipated bowels what cured him; he tells you Brandreth's Pills. Ask him who had dysentery for months what cured him; he says Brandreth's Pills. They are the best medicine for Small Pox, and they prevent any marks. A case occurred recently where Brandreth's Pills cured a deep ulcer of the foot, which the doctors said could only be removed by amputation; yet twenty-five boxes cured it and restored the patient's health. Reference W. M. Skinner, of White Plains. Brandreth's Pills are not a quick medicine, but a scientific preparation, which have been prepared by the present proprietor for over fifty years. They are wholly composed of innocent herbs and vegetable essences, are incapable of hurting the most delicate, yet sure to cleanse the bowels and blood and exert a curative effect upon every form of disease. Where for twenty years the patient had no movement of the bowels without medicine or mechanical means, a month's use of Brandreth's Pills cured, restoring the bowels to regularity.

The secret of restoring the vital principle is discovered in this medicine; it generates and increases healthy animal warmth. Provided the great organs are not irreparably injured, there is no disease Brandreth's Pills will not cure. Remember, they concentrate the vitality of the system to eject the disease wherever located in the body.

BRANDRETH'S PILLS

are sold by all dealers—25 cents a box, either sugar-coated or plain—and at Dr. Brandreth's PRINCIPAL OFFICE, 294 CANAL STREET, NEW YORK.

STOP AND READ.

All forms of Kidney diseases, Pains in the Back, Sides and Loins, are positively cured by

GRANT'S REMEDY.

Its effects are truly marvelous in Dropsy, Gravel and Bright's disease. No matter of how long standing the case may be, positive relief is had in from one to three days. Do not despair, hesitate or doubt, for it is really a specific and never fails. It is purely a vegetable preparation. By its timely use thousands of cases that have been considered incurable by the most eminent physicians have been permanently cured. It is also indorsed by the regular physicians and medical societies throughout the country. Sold in bottles at two dollars each, or three bottles, which is enough to cure the most aggravated case, sent to any address on receipt of five dollars. Small trial bottles, one dollar each. All orders to be addressed to

TROUT FISHING!

The Wisconsin Central Railroad
THROUGH TO
LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland and return for \$20 are sold at 63 Clark street, or the C. M. and St. Paul, Madison Street Depot, Chicago; also at low rates from Milwaukee. Dogs, guns and camp equipage taken free.

The points of attraction to sportsmen on this "Forest and Stream" route are Menasha and Green Bay for bass fishing; Dufferin Creek and Lake for muscalonge; the many branches and lakes of the Flambeau and Chippewa which teem with bass, pike and pickerel; never till last season fished by sportsmen. Between Silver Creek and Ashland all are trout streams, and many others can be easily reached along the shore from Ashland or Dayfield, while rock fishing for speckled trout and trolling in the Bay affords excellent sport.

The Chequamegon hotel at Ashland, built last year, has been enlarged, and is supplied with a steam-yacht, sail and rowboats and excellent guides. The atmosphere at Ashland is a sure preventive of hay fever.

Steamers from Ashland to all Lake Ports,

"THE FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
of Northern Michigan,

VIA THE

Grand Rapids & Indiana RR.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)
Sportsmen who have cast a fly, or trolled a spoon in the

Grand Traverse Region

will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein the fish named above, as also Muscalonge, Pike and Pickerel abound.

In no other streams east of the Rocky Mountains is the famous AMERICAN GRAYLING found in such numbers.

BROOK TROUT Season opens May 1.
GRAYLING Season opens June 1.

The Sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at any point.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma.

The Hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1 Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities offered to tourists and sportsmen; also Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns and Fishing Tackle Carried Free, at owner's risk.

Camp Cars for fishing parties and families at tow rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide, containing full information as to Hotels, Boats, Guides, etc., and accurate maps of the fishing grounds, send to

THE SPORTSMAN'S ROUTE.

Chicago & Northwestern R.R.

Embraces under one management the Great Trunk Railway Lines of the West and Northwest, and, with its numerous branches and connections, forms the shortest and quickest route between Chicago and all points in Illinois, Wisconsin, Northern Michigan, Minnesota, Iowa, Nebraska, California, and the Western Territories. Its OMAHA AND CALIFORNIA LINES, the shortest and best route for all points in Northern Illinois, Iowa, Dakota, Nebraska, Wyoming, Colorado, Utah, Nevada, California, Oregon, Ohio, Japan and Australia. Its CHICAGO, ST. PAUL AND MINNEAPOLIS LINE is the shortest line for Northern Wisconsin and Minnesota, and for Madison, St. Paul, Minneapolis, Duluth and all points in the Great Northwest. Its WINONA AND ST. PETER LINE is the only route for Winona, Rochester, Owatonna, Mankato, St. Peter, New Ulm and all points in Southern and Central Minnesota. Its GREEN BAY AND MARQUETTE LINE is the only line for Janesville, Watertown, Fond du Lac, Oshkosh, Appleton, Green Bay, Escanaba, Negaunee, Marquette, Houghton, Hancock and the Lake Superior country. Its FREMONT AND DULUTH LINE is the only route for Elgin, Rockford, Freeport and all points via Freeport. Its CHICAGO AND MILWAUKEE LINE is the old Lake Shore route, and is the only one passing through Evanston, Lake Forest, Highland Park, Waukegan, Racine, Kenosha to Milwaukee. PULLMAN HOTEL CARS are now running regularly between Chicago and Council Bluffs, on the California Express Train of the CHICAGO & NORTHWESTERN RAILWAY.

West-bound, they leave Chicago daily, except Sunday (and on every third Sunday), from the Wells Street Depot, at 10:30 A. M., and arrive at Council Bluffs next morning.

East-bound they leave Council Bluffs at 5:30 P. M., daily, except Saturday (and on every third Saturday), and reach Chicago next afternoon.

No other roads west of Chicago run Pullman or any other form of Hotel cars.

TO SPORTSMEN.

This line presents peculiar advantages. For Prairie Chickens, Ducks, Geese and Brant shooting, our Iowa line to-day offers more favorable points than any other road in the country, while for Deer and Bear hunting, and for Brook Trout, Lake Salmon, Pike, Tiger and Bass fishing, a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by anything in the West.

FOWLER & FULTON, General Agents, 300 Broadway, N. Y.

Fisher's Muzzle-Loading Long-Range Match Rifle.

Interchangeable Grip and Heel Verner Scale, and Wind-Gauge Front Sight, with Spirit Level. Fine English Walnut Pistol-Grip Stock.

This Rifle requires no patent muzzle to load it. Uses the same bullet as the Sharps and Remington rifles. Loads the same as breech-loaders, where they do their best work, viz., from the muzzle. As Perry's Score-book says: "No shells to cart around and pay for. Can be used at one-half the expense of the breech-loader. With powder and balls always ready for a day's sport." Every rifle guaranteed. Breech-loading rifles at manufacturers' prices. All long-range rifles sighted and tested at Creedmoor without extra charge. Agent for P. WEBLEY & SON'S BREECH-LOADING SHOT-GUNS. Send for Circulars. H. FISHER'S Illustrated Catalogue and Score-book for Rifle Practice, price 25 cents.

IRA A. PAINE'S

FEATHER FILLED GLASS BALL.

PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Sprig Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.

Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

Bogardus' Patent Rough Glass Balls and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit. CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade.

MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price \$8. Old style, \$6.
Parties buying glass balls will receive, in each barrel containing 250 balls, score book and rules for glass ball shooting, containing 40 pages.

HEADQUARTERS FOR BALLS, HARGETY BROS. & CO., 10 Platt Street, N. Y. City.
FOR TRAPS, HART & SLOAN, Newark, N. J.
